If you require Yorkshire Canaries of the correct type, at reasonable prices, allow me to send you the birds you require, carriage paid, on seven days' approval. I have over one thousand birds to select from, including many winners and matched pairs for breeding winners. Light-feathered upstanding Yorkshire cocks, in full song, 6/6, 7/6, 8/6, 10/6, 12/6, 15/- each. Racy Yorkshire hens, 3/6, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6 each. Properly matched pairs, 8/6, 10/6, 12/6, 15/-, 17/6, 20/- per pair. A few winners at reasonable prices. Send me an order; it will convince you and your friends that I give the best value money can buy. All my customers receive satisfaction. "206, New Town, Stockport. Feb. 23rd, 1907. Bird arrived, carriage paid, with which I am very pleased. It is exactly the bird I required, for which accept my best thanks.—I. Clark to Miss Storey." "18, Lindsay-st., Bishop Auckland. Feb. 23rd, 1907. Bird to hand in the pink of condition; more than I expected at the low price. Thanking you for prompt attention, etc.—C. Stainsby to Miss Storey." "Les Caches, Guernsey. Feb. 22nd, 1907. I am perfectly satisfied with the bird you sent me. He is a splendid singer. This is the first time I have been so honestly treated. Again thanking you.—J. Collenette to Miss Storey." "2, Campton-st., Plaistow. Feb. 23rd, 1907. Received birds quite safe. I must say I am delighted with them; they arrived in splendid condition. I think it impossible to get such quality of birds elsewhere at the price. For all my future orders I shall certainly send to you.—E. Archer to Miss Storey." "13, Sengenydd-st., Treorchy. Feb. 23rd, 1907. Received Canaries safe, and must thank you for fair, honest, honourable dealing. Your mode of packing is indeed a treat. I think you are the most honest person to deal with.—J. Byard to Miss Storey." "Reigham Cottage, Alnwick. Feb. 22nd, 1907. Bird arrived safe, and gives every satisfaction. Your way of sending them does you great credit. I shall certainly speak of your straightforward and honest dealing.—R. Arele to Miss Storey." "14, Tees-st., Middlesbrough. Feb. 23rd, 1907. I am highly pleased with the Yorkshires you sent me, being extra good value for the money. The cock bird commenced singing on arrival. He is a beauty.—M. Manyham to Miss Story." "Nepsbury Cottage, St. Albans. Feb. 23rd, 1907. Received birds. They are quite satisfactory and very lively. Thanking you very much for such prompt attention and careful packing, etc.—J. Hill to Miss Storey." "101, Wellington-st., Milton. Received bird in grand condition. It is a perfect treat; exactly what I wanted. Thanks for your prompt attention.—R. Walker to Miss Storey." "131, Fair View, Haydock. Feb. 23rd, 1907. Bird arrived in best of health and good condition, for which I am very much obliged to you, for prompt businesslike treatment. It is good value for my money.—W. Youd to Miss Storey." I have hunderds of thousands of similar letters open for inspection. Remember I send birds, carriage paid, on seven days' approval, at my risk. New illustrated list free.—Miss E. L. Storey, Crowle, Doncaster.

3 Points

I WISH ALL TO NOTE.

1. QUALITY. .
2. PRICE. . . .
3. QUANTITY.

I can offer you from the largest varied collection in the world, consisting of thousands upon thousands. This can easily be proved; in fact has been proved over and over again by such persons as a representative of this paper, as well as Mr. J. Robson and Mr. C. A. House, besides hosts of other well-known experts.

See my advertisements under respective headings. All on approval. Cash or deposit.

Few Fresh Specimen Opinions of Satisfaction to All.

A DIALOGUE
Which takes place at Meir, in Staffordshire.

"Many times I have seen your advertisements in 'Cage Birds,' but this letter is not the result of reading same, but from the testimony I got from a woman where I happen to be working, a place called Meir. She had a Hartz Mountain Roller, and I asked where she got it from. She said 'W. Rudd's.' I said to her, 'I want a bird or two myself, but I am afraid of getting done.' She said to me, 'You send to Rudd, he won't do you over; my man has traded with him for seven years, and he has not done us over once.' 'Well,' said I, 'that's good enough for me.' So I now write you for what I want.—Thos. Bradley to W. Rudd."

[Now should not this also be good enough for all who read it.—W.R.]

Treasury, St. George's, Grenada, West Indies, Jan. 24/07.—I beg to acknowledge receipt of the Cage with 14 Canaries. They ARRIVED IN EXCELLENT CONDITION, and give full satisfaction to all concerned. I hope to send you another order soon, as there are lots of my friends desiring to get birds after seeing these you have sent me.—J. Braithwaite to W. Rudd.

24a, Rosehill-ter., Swansea. February 24th, 1907.—I received the breeding cage safe, and am very pleased with it. I think it very cheap.—W. H. Orchard to W. Rudd.

43, Sehert-rd., Forest Gate, London. February 25th, 1907.—Birds arrived in good time and in perfect condition, and give every satisfaction. Quite up to the standard.—E. Davis to W. Rudd.

2, Cross-st., Marston, Cheshire. February 23rd, 1907.—Kindly send a tin of Eggertine. If it had not been for your Eggertine my bird would have been dead by this.—T. Southern to W. Rudd.

Mytholmroyd. February 22nd, 1907.—Birds arrived safe, and give satisfaction, coming high above expectations, and in grand condition.—J. Dugide to W. Rudd.

41, Vine-st., Bishopthorpe-rd., York. February 22nd, 1907.—The Parrot safe to hand. It is a very fine bird, and wonderfully tame. We are delighted with it. I did not expect such a large bird.—R. Dempsey to W. Rudd.

36, Grove-rest, Beechen-grove, Watford. February 20th, 1907.—Please forward a 2/6 tin of Eggertine, as I have quite run out, and I find there is nothing to equal it for my birds.—A. Rowe to W. Rudd.

32, Stavordale-rd., Highbury Hill, London, N. February 21st, 1907.—I am pleased to say birds arrived safely, and in splendid condition. I am simply delighted with them.—J. T. Watcheson to W. Rudd.

8, Hamilton Back-land, Overtown, By Wishaw. February 19th, 1907.—Birds arrived safe. The cock was singing when I went into the station for them. They are a pair of gems for the money.—R. Wyper to W. Rudd.

25, Alma-pl., Cowley-rd., Oxford. February 21st, 1907.—I am very pleased to tell you the Parrot arrived safe, and I am very pleased with it. He commenced talking and whistling before we could get the box open, and has been talking and whistling all the afternoon.—M. Emmanuel to W. Rudd.

4, Salisbury-rd., Nocl Park, Wood Green, London, N. February 22nd, 1907.—I received the Yorkshire cock safely, and I am very pleased with it. It is similar to the one I had from you two years ago. I consider your birds well up to guarantee in point of value, far superior to birds offered at double the price by local fanciers.—H. Effingham to W. Rudd.

2, Stanhope-ter., Hyde Park, London, W. February 22nd, 1907.—I received the Canary quite safe, and am very pleased with it. He is the best I have ever had.—L. Stimpson to W. Rudd.

9, Achilles-rd., West Hampstead, London, W. February 20th, 1907.—The birds arrived safe. I must say I am very pleased indeed for your fair dealing. They are much better than I expected.—F. Moore to W. Rudd.

31, Tait's-lane, Dundee. February 21st, 1907.—Kindly send me a tin of Eggertine. I had some from you before, and I think it is a splendid egg food. I have given my birds nothing but your Eggertine, and I have now four healthy young ones.—J. Nicholson to W. Rudd.

Highland-villas, Khartoum-rd., Inswich. February 23rd, 1907.—Received the two pairs of Canaries. I am very pleased with them. Had I have paid the money for the two cocks I could not have been better satisfied, as by 7.30 the next morning they were "raising the roof." I think you have charged me for two songsters, and thrown the hens in. This is my first order to you, but it will not be my fault if it is the last.—T. Wild to W. Rudd.

NOTE.—All Amateurs should try my Special Matched Pairs of Prize-bred Norwich Plainheads at 10/6, 12/6, 15/-, and 20/-. Crested ditto, 15/-, 20/-, 25/- and 30/-. Yorkshires, 12/6, 15/-, 20/-. These are the *Best Value* ever offered.

Travelling Cages, 3d. extra.

ORIGINAL BIRD CLUB.

DISTANCE NO OBJECT.

"Asthmarine."

This remedy has the largest sale of any similar article by far. Beware of imitations! For all lung affections it is marvellously efficacious—not a liver burner, but both soothing and healing. 9d. and 2s. 6d. per bottle, post free. Once used, always kept ready for any sudden attack.

"EGGERTINE."

It is the best, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for breeding as nothing else will. For getting back hens into breeding condition it has never had a rival. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size.

10, Seymour Street, Splotlands, Cardiff, Feb. 18, 1907.—Please forward a large tin of Eggertine. It is the best preparation for keeping birds in condition that I know of.—H. F. Bickerton to W. Rudd.

After the stress of the Show Season your birds naturally require a pick-me-up. There is absolutely nothing in the Bird World that can compare with

RUDD'S CELEBRATED TONIC DROPS,

THE MOST INVIGORATING PREPARATION ON THE MARKET.

W. RUDD, The Bird Specialist, NORWICH.

SAMUEL DEAN, 24, Crossley Street, Gt. Horton, Bradford, Breeder and Exhibitor of high-class Yorkshire Canaries, including Greens x259

PARROTS, Crimson Grey, acclimatised, chattering, 13/6, cage 6/6. Testimonial:—"Postmaster, Crowborough. Parrot to hand, delighted with him, real bargain."—Cobb, 44, Gordon-rd., Dartford.

PARROTS.—Nice Blue-fronted Amazon, 12 months old, could be taught anything, tame, strong and healthy, 21/-; approval; new indestructible cage, 4/6.—Adams, Park-pl., Liverpool.

SPLENDID Amazon Parrot, three years old, talks, laughs, cries, etc., properly acclimatised, comes on finger, in perfect health and plumage, 40/-—Gore, 131, Gooch-st., Birmingham.

FULL list and prices of birds and animals that are due to arrive at the beginning of April can be had on application.—Payne and Wallace, The Little Zoo, Bath.

PARROTS.—Young Blue-fronted Amazons, living pictures, finger-tame, 25/- each; with cage, 29/-; safe delivery guaranteed.—Dalcy, 95, Tithebarn-st., Liverpool.

PARROTS.—South African Grey, thoroughly acclimatised, with full wings and tail, 35/- each; with old cage, 37/6; with full instructions as to feeding, etc., sent if desired.—Daley, 95, Tithebarn-st., Liverpool.

"FINCHES from Afar."—A superb-coloured plate of fascinating Foreign Finches sent post paid, carefully packed, on receipt of sixpenny postal order.—F. Carl, CAGE BIRDS Office, 154, Fleet Street, London, E.C.

"A GORGEOUS Quartette."—A magnificent coloured plate of Parrakeets, by Mr. H. Goodchild, sent post paid, carefully packed, on receipt of three penny stamps.—F. Carl, CAGE BIRDS' Office, 154, Fleet Street, London, E.C.

BUDGERIGARS, the very finest specimens, size, condition, colour, 6/6 pair; aviary-bred birds, 5/6 pair; yellows, magnificent specimens, 10/- pair; finger tame greens, 7/6 each; full list.—De Von, 114, Bethnal Green-rd., London.

PARROTS.—Splendid Silver South African Grey Parrot, real beauty, 18 months old, whistles splendidly, just on the point of talking, 25/-, with cage, worth 50/-; approval.—Adams, 19, Park-pl., Liverpool.

PARROTS.—Budgerigars (green), 7/6 pair; yellow Budgerigars, 16/- pair; Parrotrimers, 5/- each; Quaker Parrakeets, 5/-; Rose Cockatoos, 10/- each; Parrot cages, indestructible, 4/-, 6/6, 8/6, 12/6, 15/-, and 25/-.—Daley, 95, Tithebarn-st., Liverpool.

SPLENDID large Australian Grey Galah Parrot, in perfect health and plumage, moulted in England and warranted acclimatised, very tame, chattering and whistling well, and will make splendid talker, 15/-.—Gore, 131, Gooch-st., Birmingham.

PARROTS.—Splendid young African Grey Parrots, in good feather, health, and condition, 25/- each, with new brass-mounted, indestructible cage, 29/-; with full instructions as to feeding, etc., sent if desired; satisfaction and safe delivery guaranteed.—Daley, 95, Tithebarn-st., Liverpool.

SNOW FINCH (*Fringilla nivalis*), not Snow Bunting, 15/- each; Cutthroats, 4/6; Bengalese, 3/6; Spice Birds, 3/-; Orange Cheeks, 3/6; Cordon Bleus, 5/6; Avadavats, in song and colour, 3/-; Cockaticls, 9/6; all true pairs, healthy; approval.—Bearsby, Corn Merchant, Tunbridge Wells.

BUDGERIGARS, unrelated, from extensive outdoor aviaries, not bird shop. I have over 200 eggs and young in nest at present. Greens, 6/- pair; cocks 3/-, hens 4/-; yellows 10/6, cocks 5/-, hens 6/-; husk nests, 6d. each; inspection invited and see yourselves, a sight worth seeing.—Sapsford, Teddington.

AFRICAN Grey Parrot, acclimatised, on hard seed, whistles, very tame, 30/-, with cage; pair Rock Parrots, both tame and talking, beautiful condition, 30/-, with cage; pair Moustache Parrakeets, ready to nest, 10/-; pair Quaker Parrakeets, ditto, 10/-; pair Ringnecks, lovely condition, 10/-; or exchange.—Pearson, Grenwich.

WILL the dealer (believed to be living at Clapham) who purchased a quantity of Australian Finches (on one occasion 52 pairs) from Mr. J. B. Housden, of Sydenham, kindly communicate with Payne and Wallace, The Little Zoo, Bath, or Messrs. Palmer and Robinson, 19, Charles-sq., Hoxton, and he will be remunerated for trouble taken.

AMAZON King Green Parrot, most beautiful plumage, splendid speaker, nearly 200 words, repeats long sentences, nursery rhymes, sings, whistles songs and tunes, dances, laughs, cries, clever, interesting mimic, very healthy, hardy, no objectionable sayings, suitable lady's pet, so tame comes on hand, four years old, worth £10, sell £3 15/-; exchange jewellery, etc.; approval before purchase.—Bennet, 27, King-st., Liverpool.

PEKIN Nightingales.—The majority of people buying these are unable to tell difference between the sexes, and this fact is taken advantage of by some unscrupulous dealers. If you would be certain of getting a cock bird, patronise a man who will guarantee sex in every instance, and send birds for your approval. I have a grand stock of the true Pekin Nightingales, in perfect health, cocks 2/-, hens 1/- each. Cocks warranted in song, 3/- each. These birds are easily kept in cages or aviaries, and cocks have a lovely song.—W. Gore, 131, Gooch-st., Birmingham.

BOOKLET FREE.

FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

PARROT LOVERS

Should send post-card immediately for our new enlarged book entitled "Parrot Prattle" (registered copyright, infringers and imitators will be prosecuted against). This book contains 120 pages of very interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four weeks' trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

PARROT AVIARIES, MORECAMBE.

CUT THIS OUT.

Don't forget as soon as the warm weather comes Budgerigar Hens will be wanted. When you get in a fix with egg-bound Hens and other calamities apply to me and I will help you out.

Shall have to advance prices shortly, secure those bargains while on offer.

Hens still 3/-, Cocks 2/6, Pairs 5/-, Selected 6/-. Yellow, Hens 6/-, Cocks 5/-, Pairs 10/-, Selected 12/-. Cockatiels 10/- pair, Selected 12/-, Hens 6/-, Cocks 5/-. With every pair I give free two unbreakable husk nests. Remit 6d. for postage. These are the finest Budgerigars in England, so say the testimonials from delighted customers.

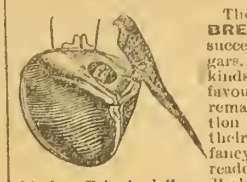
PEARSON, Budgerigar Specialist, **GREENWICH.**



The improved **"SECURE" BREEDING HUSKS** for successfully rearing Budgerigars. Never fail to pieces as other kinds do. They have been the favourite for 16 years, and still remain unequalled. Competition and comparison increase their popularity, and every bird fancying paper has advised its readers to prefer them to other kinds. Principal Zoos, Parks and Budgerigar Breeders use them. Price **4/6** dozen, smaller quantities **5d.** each. No agents and no second quality. Pamphlet, invaluable to amateurs, entitled "Budgerigar Breeding," free on application. Send post card and read it before buying any husks at all.

HARPER, Upper Villiers Street, **WOLVERHAMPTON.**

THE L. AND P.O.S.

At a special committee meeting of the London and Provincial O.S., held Tuesday evening, Mr. George Crabb, the esteemed President, following up his frequently-expressed intention to retire from the office he has held so worthily for about a decade, firmly intimated that he could no longer see his way to retain office, and, very reluctantly, the committee had to accept his decision. Mr. Crabb feels that his tenure of the Presidential position has already exceeded a fair limit, besides which he cannot afford the time for the constant attendance at committee meetings. The question of selecting a fresh President was deferred. It was suggested that Mr. T. Heath should be elected to take his place, but that gentleman declined the honour. The Society has decided for the future to have a Chairman and Vice-Chair, and elected as the first Chairman Mr. J. W. Ramsden, Mr. J. H. Couzens being voted to the position of Vice-Chair. In the course of a month or two, steps will be taken *re* the election of a new President.

THE CRYSTAL PALACE SHOW.

A.O.V. CANARY.
Judge, Mr. Robson.

A nice class of a dozen with a large percentage of even-marked Norwich, although the winner, Helliwell, was one of those great but most beautiful of varieties, a four-pointed yellow Yorkshire, and it was a Yorkshire, too, as well as being nicely balanced in marking; 2, Adnitt and Driver, grandly shaped four-pointed yellow Norwich, plenty of colour and quality, and not at all badly marked; 3, Brooks, very shapely Dutch Frill, plenty of length and size, carries a wealth of feather, which is well put on; 4, Pegg, neatly marked four-pointed yellow Norwich, not so much substance, but very neat and natty, and well balanced in markings; vhc, Silk, another four-pointed Norwich, Charles, you do like them, but we have seen your show even-marks with more true Norwich character than this bird possesses; hc, Mason, pied yellow Cinnamon, capital shape, colour and quality of feather; c, Gilbert, another very nicely marked Norwich.

NOVICE A.O.V.
Judge, Mr. J. Robson.

CANARY OR MULE (14): 1, Davies, very rich-coloured Linnet-Bullfinch Mule, beautifully feathered, capital shape and size, very nicely marked; 2, Pitkin, three-pointed buff Goldfinch-Canary Mule, capital shape, beautifully feathered, nice blaze and bar, put down very fit; 3, Fisher, large, well-spangled gold Lizard, rare shape, colour and feather; 4, Ross, well-marked, rich-coloured Goldfinch-Bullfinch Mule, in capital feather; vhc, Ninners, variegated buff Goldfinch-Canary Mule, nice shape, colour and feather; hc, Ramsden, very fine Goldfinch-Greenfinch Mule, well marked, grand feather, shape and colour; c, Johnson, neat little buff Border, shapely and stylish, and full of quality.

The exhibits were received in good time on the whole, though one or two exhibitors erred in both directions, some birds coming to hand a full day earlier than they need have done, and some not arriving until well on in the Friday morning, in an odd case or two being too late for competition.

The celerity with which the Show was cleared at the close was a veritable eye-opener. Before four o'clock struck the way for a quick clearance was being quietly engineered. The cases for the long distance birds had been looked out, and they were got away in record time, all the Scotch exhibits actually being in a through van on the express which leaves the Metropolis about six o'clock. By ten p.m., out of all the vast array of birds not a single one remained, either local or otherwise. This is indeed good management.

The only serious mishap to incoming birds happened to two Linnets belonging to the well-known North Country exhibitor of these birds, Mr. Kearton, of Cleator Moor. The case containing them evidently met with rough usage en route, for one bird was taken out dead, and the other seriously ailing. Those who know the quality of the Linnets he puts down will sympathise with Mr. Kearton in his misfortune.

It is a few years since we had such a nice lot of Lancashires at the Palace. One or two could not (or would not) agree with Mr. Compston's awards. They said he had not considered size enough. Mr. Compston's contention is, that valuable as may be the slashing, big, long, feathered birds, as stock birds, they are not show birds. On the show bench he wants the finished article, and of the two he thinks size without carriage should give way to carriage with less size.

Did those Green men find the judge on Saturday? Whilst they were breathing thunder against T.H., he was enjoying the Irish scene in the House of the Crested Canary Club.

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

A. AMBLER, 17, Lytton Road, Bradford. Judge of Canaries and Cage Birds. Life experience. 11 years reporter to the Fancy Press.

Dec. 7, 1907.—**Cupar-Fife.**
Dec. 13 and 14.—**Gateshead and District.**
Dec. 13 and 14.—**Scaham Harbour & District.**

I notice in your critique of Palace Show, Yellow Crests 3rd, Woodland, should be Woollard. Please correct.—A. WOOLLARD.

Mr. H. Norman has been elected to judge the London and Counties Show of British Birds, on Saturday, March 16th, at "The Bay Malton," Gt. Portland Street.

We have done business all over England with three advertisements in CAGE BIRDS, and, as a consequence, have had to take larger premises to cope with the business.—T. LEACH AND SON, 41 and 42, Market Place, Keighley.

The London and Counties smoking concert will be held at "The Bay Malton," Gt. Portland Street, W., on Thursday, March 7th next. There will be a good array of talent, and some well-known artists will appear. The concert commences at 8.

Mr. John Wenham, 443, Langside Street, Winnipeg, Canada, writes:—I received the splendid Birthday Number, and, thanks to good packing, not damaged in the least. Extremely obliged, too, for insertion in Christmas Number, re parties who would bring out birds. I had quite a host of replies.

The Scottish British Bird and Mule Club has a balance in hand of £4 0s. 5d., as a result of last year's working, this being a slight increase over the previous season. A fine lot of medals were put up for competition amongst its members during the show season, and the club would seem to be in a very flourishing condition, 85 subscriptions having been received.

The balance-sheet of the Northern Crest Club for the past year is a very satisfactory document. Duly audited by Messrs. Currah and Crawhall, it shows a balance in hand of £4 7s. 9d., and a paid-up membership of 46. This is in addition to two £5 5s. silver cups. Crest fanciers in the Northern counties should put themselves into communication with Mr. T. Robson, the hon. sec., 41, Shield Street, Newcastle-on-Tyne, who will explain to them the advantages of membership.

One of the most handsomely printed advertising booklets we have seen in connection with the bird trade has been sent to us by Messrs. Payne and Wallace, of the Little Zoo, Lyncombe Hill, Bath. These advertisers claim that they are not "ordinary backyard or stay-at-home naturalists," one member of the firm regularly visiting Australia every year to collect birds, etc., bringing them to Europe. The trade has been carried on by them for thirty years, but until last year as a wholesale business only. They claim that their birds and animals are kept under the best sanitary conditions. Much readable and instructive letterpress, and many well-taken photographs, make up a particularly good production.

Overheard.

I took two Lancashire and Lizard fanciers for organ-grinders the other day, writes "Mutual Friend," seeing them with what I took to be an organ. I overheard the following conversation:—Said A. to B.: "How long have you taken 'C.B.'?" B.: "Since the first copy." A.: "How about this week's issue?" B.: "It's all right. What struck me most were the Lizard and Lancashire portrayed on page 166, as I remember the same two exhibitors staging their birds side by side 30 years ago! I was pleased to see them so honoured after 30 years' breeding and exhibiting. What do you think about our Australian cousin's remarks about the Lizard?" B.: "Well; let him come into Derbyshire, and I think we will surprise him for size." As I got closer to them, I found that what I took to be the organ was a seed mill on a huge scale.

Bradford (West) C.B.A.

A good and interesting syllabus for the Season 1907 reaches us from the Secretary, Mr. T. Clegg, 55, Lupton Street, Bradford. The first show will be held on March 2nd; judge, Mr. J. Wilkinson (Gt. Horton). The members' tea and social on March 9th, at 5.30 p.m. On Saturday, March 23rd, there will be a discussion on "Pairing and Breeding," chair to be taken 8 p.m. prompt. Second show, July 6th, for birds in their first feather; judge, Mr. W. H. Shackleton (Girlington). Cricket match with Windhill, date to be arranged. Third show, September 28th; judge, Mr. J. Wilman (Gt. Horton). Fourth show, December 26th; judge, Mr. R. Sutcliffe (Windhill). All these events will be held in the club-room at the Red Lion Hotel, Four Lane Ends.

H. Preece (Chesterfield) says:—I consider your "Bird World Magazine" a masterpiece with a future.

All prize-money has been paid in respect of the Queen's Park and District Matched Pair Show.—J. C. BIRCH, Hon. Sec.

Mr. J. T. Keyes (Hanwell) writes:—Re Crystal Palace Show Report, you credit me with a 1st in Novice Yellow Hens; the bird I exhibited turned out to be a cock, and was very properly disqualified.

Part I. of CAGE BIRDS ANNUAL to hand, with thanks. It's the handiest book I have had for a long time—so full of interesting notes; kindly forward No. II. as early as possible.—WM. STOVES (Sheriff Hill).

The well-known names of Messrs. T. Heath J. C. Barnes, Chas. Houlton and James Patterson appear on the judges' list for Newcastle and District Good Intent Cage Bird Show.

Owing to the limited time at the disposal of Mr. W. Hodson, Hon. Sec. of the Dulwich and Peckham C.B.S., and in anticipation of a much larger autumn show, the Committee have appointed Mr. G. F. Woolhouse to act as show manager for the year.

Spen Valley C.B.S. will hold their last show of the season on March 2nd for pairs best-matched for breeding, when Mr. J. Wilman, of Bradford, will judge. Entries close first post on Saturday morning, same day as show.—A. WHITEHEAD, Hon. Sec.

The 1907 balance-sheet of the Leigh and District C.B.S. shows a balance of £4 8s. 4d., writes Mr. A. Parks, the Secretary, despite a considerable increase in expenditure in catering in a better style for the needs of the fancier. The balance makes a rosy beginning for the coming season. Auditors: Messrs. R. Davies and T. Wilkinson.

A satisfactory balance-sheet for the year ending January 26th, 1907, is that presented by the Bramley and District O.S. In spite of a small deficit on the Open Show, the finances of the society are in a flourishing condition, a balance remaining in hand of £5 11s. 11½d. An attractive syllabus has been prepared for the present season.

Accept my heartiest congratulations on the Palace Show number, and for the typical sportsmanlike criticism. I was very surprised to see the first portion of the paper that I read before the Swindon fanciers in type so quick; it speaks volumes for your excellent management and your excellent paper. With best wishes for "Mother" and "Child"—CAGE BIRDS and the "Bird World Magazine."—S. W. BIRCHLEY (Churchdown).

"Bird Notes," for February, has a beautiful coloured frontispiece of that very beautiful bird, the Superb Tanager. It is the work of Mr. J. G. Keulemans, and Mr. C. Castle-Sloane, F.Z.S., supplies the instructive accompanying letterpress. Dr. Cresswell draws to a close his paper "Concerning Rooks," a very thoughtful and interesting discourse on those intelligent members of the avine family. Mr. Pengelly writes on the "Crows of the Fen Country," while Mr. Castle-Sloane has a further article and plate on the "Concave-casqued Hornbill." Mr. J. D. Murray writes interestingly concerning the Grey Parrot, and mentions incidentally that he does not believe in the "repetition method" of teaching them to talk, but believes in letting them hear constant and varied conversation; also that hen Parrots are usually better talkers than cocks, and that the latter prefer ladies (*genus homo*, of course), and the former gentlemen, thus making it possible to easily sex them. The next issue (March) commences a new volume, and the editorial duties, we note, then pass into the hands of Mr. W. T. Page, F.Z.S., etc.

Old Friends.

It gave me much pleasure, on opening the Palace Number, to see the lifelike reproduction of my broken-capped Lizard, alongside of my old friend, John Garner's famous Lancashire Coppy. I well remember, although it is 29 years last October, going over the hills with the late Joseph Wrighley, to Whalley Bridge Show, fully expecting to get four firsts. On arriving we saw our friend, John Garner. We then knew our hopes were blighted, and that we were down! We had to play second fiddle, to the tune of four seconds! I have taken your paper from the "first" issue, and with pleasure noted the strides it has made. I wish you future success. I consider your report of the Palace Show is very good, and very fair.—C. E. FISHER (Glossop).

We have to record a gratifying increase in the list of shows who deem it advisable to be represented in our

DATES FIXED COLUMN.

Will Secretaries and Committees kindly run their eyes over this feature? It is practically the only safeguard against clashing, that frequent cause of so many disastrous shows.

The congestion of cage bird shows increases every year. Take time by the forelock, and guard against disappointment.

A reference to the file of CAGE BIRDS for the past show season proves that practically every show of any consequence thought it worth while to be represented in this list, and the advantages we offer to a show which guarantees to spend not less than 25s. with us in advertisements are so many that the popularity of the feature is not to be wondered at. A guaranteed show is entitled to be included on our Fanciers' Map, issued at the start of the show season; it is entitled to the free insertion of the date, name of show, and initials of judges from the time of guarantee up to the date of the show; we indicate in the column whether the show is held under Union Rule or Licence; we give either a handsome bound volume of CAGE BIRDS or two framed coloured plates, at the committee's option, as special prizes; and we do our best to see that every guaranteed show is given a proper report in our columns.

We are, however, pleased to review show schedules free of cost, whether the show is guaranteed or not, and we especially draw attention to the very great convenience afforded to show committees by our features "Entries Extended," "Entries Close," and "Prize Money Paid."

To the executives of Scotch shows we make a special appeal in view of our Scotch edition, which enables us to report with great thoroughness the many interesting Scotch exhibitions.

In conclusion, we would remind committees that by guaranteeing their shows with us they effect a considerable saving, as our tariff for guaranteed shows is one shilling per inch less than it is for non-guaranteed events. Moreover, the wins of shows guaranteed for our "Dates Fixed" column are inserted in our annual register of wins free of cost, thus completing a series of advantages of which we feel sure committees will see the full force.—The Manager, CAGE BIRDS, 154, Fleet Street, London.

AN INTERESTING FACT.

Mr. LAMBERT BROWN, Joint Manager of the CRYSTAL PALACE SHOW, informed his Committee at their last meeting that about

95 out of every 100

applications for Schedules came through "Cage Birds."

Show Secretaries, make a note of this!

"Health and Strength Magazine" for March has been received. All physical culturist readers of "C.B." should make a point of obtaining this really wonderful two-pennyworth.

At the next monthly meeting, on February 7th, of the Bristol fanciers, at their headquarters, the Crown and Dove Hotel, Mr. J. Payne, the well-known cage bird judge, will give a lecture on "Cage Birds." Fanciers in the district are invited.

Cocks Among the Hens.

It was current gossip at the Palace that several masculine birds—the naughty things—had found their way into classes intended solely for the ladies. We saw two 'cute fanciers laughing over the Norwich huff hen class, and in the novice yellow Yorkshire hen class the winner was generally held to have a very "cocky" look about her.

The Disqualified Greens.

At a special committee meeting, held on February 26th, the London and Provincial O.S. decided, in connection with the recent disqualification of two Green Yorkshire Canarics at the last Crystal Palace Show, to uphold the decision of the judge. We understand that the exhibitors concerned had a special representative present in the person of a Mr. Fisher, and this gentleman, we are told, admitted that the feathers were of an unnatural appearance, but submitted that there was no proof that the tampering had been done by the exhibitors. It might, he argued, have been done by other birds in the flight. Certain expert testimony was placed before the Committee and the exhibitor's representative. This testimony left no shadow of doubt that while there are naturally "square" feathers in a Canary, the particular feathers upon which the disqualification had been made certainly were unnatural, and had been made so by some such instrument as a small forceps or pair of nail clippers. Mr. Ramsden will shortly visit Liverpool, so we hear, to confer specially with the Green Canary Association on this point.

WILL YOU HELP?

Ten Specimens for each Reader.

Our Palace Show Number of 1907 promises to be remembered as one of the most successful issues ever sent out from this office. Owing to the work involved in getting out this tremendous 48-page issue, with its beautiful plate and show photographs, we were rather later than usual in publishing, but, despite that fact, as soon as the paper appeared on the stalls, repeat orders came flashing over the wires from every direction. Messrs. W. H. Smith, the well-known wholesale newsagents, for their London houses alone had to be refused no less than thirty additional quires (lots of 26), and the Palace Number of "C.B." was out of print the same day as it was published. We are now in a position to guarantee advertisers a minimum weekly circulation of 42,000 actual copies, and we are calling for the assistance of our readers to convert this total into 60,000.

We suggest that each reader make himself responsible for the circulation of ten specimen copies, with the idea of getting their friends to take up the hobby of birdkeeping, or send us the names and addresses of ten friends to whom we can post copies of CAGE BIRDS. We will send the ten copies carriage paid to you, or post free direct to your friends. By helping us, remember you are helping yourselves and your hobby.

Thanks for the treat you have given readers of CAGE BIRDS this week. Your plates, and also your "comie side," of the Crystal Palace Show are good. I enjoyed my trip to London; sorry to have to go home so soon. Our Annual Scottish National Meeting, held last night, was a splendid gathering. All old officials elected again. Great hopes of a record show.—D. KINLAYSIDE (Edinburgh).

I have had this week's coloured plate framed. I think it a nicer plate than "Stars of the Season."—F. COCKERILL (Stockport).

[This reader is doubtless a Norwich fancier. —ED. "C.B."]

I think your plate a treat, and also your supplement; we always have plenty for our money. CAGE BIRDS is the best paper that has come before the public. Every success to you and your staff.—W. J. EDWARDS (Abertillery).

Your Palace Number and plate are excellent. —W. SCHOFIELD (Ipswich).

W. White (Cowes, I. of W.) says: I noticed my case (one with a strap round it) in your photograph of the Palace Show. I thought the report of the show was splendid.

Just the plate I have been wanting for so long. I hope you have another one you can let me have. I have taken your paper since it first started.—G. JEFFS (Northampton).

After reading CAGE BIRDS this week, I feel as if I had been at the Palace; everything seems so minutely described. CAGE BIRDS has done its best.—H. TAMS (Longton).

Your Palace Number is grand, and quite a surprise, the photos. being so well reproduced that it is easy to recognise all. Mr. Norman is to be congratulated upon his blaze of colour and beauty.—R. J. PRETTY (London).

Many thanks for excellent report of Palace, also coloured plate. The report simply carried one right through the show.—W. B. SMART (Loanhead).

Allow me to heartily congratulate you on the splendid Palace Number you gave us—a most interesting Number from start to finish.—J. H. ROE (Derby).

Allow me to congratulate you on your Palace Number. The plate, "A Blaze of Colour," is worth the price charged for the whole lot. How can you afford to give us such a lot for the money? Have got you another new reader this week.—F. W. PICKARD (Wakefield).

A Disclaimer.

Mr. R. A. Newley (having been informed that a man has visited suburban shows representing himself as R. A. Newley) wishes us to state that he has no representatives—that no one has authority to use his name—and that he has no other address than 24, Stockwell Green, London.

"LIVERPOOL" VIRUS
is absolutely harmless to human beings and animals, but is speedily fatal to

Every feature has been thoroughly revised and brought up-to-date. Received with overwhelming approval. Copies selling like ripe cherries.

See what a purchaser says:—

"Cage Birds" Annual this morning; think it a grand sixpennyworth; no bird keeper should be without it. The plate is excellent.—ALF. ROWLETT (Peterborough).

Post free from the Publisher, 7½d.,

F. CARL, 154, Fleet St., London.

Laisterdyke B.F.A.—March 5th, at Royal Oak Hotel, 8 p.m. Dinner, concert, and business; members please attend.—J. Pownall, sec.

Leeds C.B.S.—March 2nd, at Lockhart's, Briggate (next Hope Bros.), 7.30. Pair Show; all fanciers invited; admission free.—Stephenson and Hornby, secs.

Leeds R.C.C.—March 3rd, at Lockhart's, 55, Briggate (corner of Commercial Street), 7.30 p.m. To discuss invitation from Leeds C.B.C., re amalgamation, and other important business.—C. Towes, hon. sec.

Leicester Hand-in-Hand C.B.S.—March 6th, at White Swan Hotel, 8 p.m. Table Show, Norwich buff hens, any variety, open; ditto novice.—Chas. Draper, sec.

Leigh and Dis C.B.S.—March 5th, at Railway Hotel, Leigh, 7.30. Discussion; friends invited.—A. Parks, sec.

Leith O.S.—March 9th, at Labour Hall, Smith's Place. Fixing date of show; enrolment of members.—George Brown, sec.

Loanhead and Dis. C.B.S.—Sat., March 9th, at Volunteer Hall, Loanhead, 7 o'clock. Classification booking of hens; fanciers interested in Scotch Fancy, Norwich, Borders, Mules, and British invited; rules ready.—Walter B. Smart, sec.

Loughborough and Dis. C.B.A.—Wed., March 6th, at Charnwood Coffee House, 7.30 p.m. Table Show British birds; judge, Mr. Judd (Leicester); entrance fee, 3d.; entries close Monday, March 4th; birds brought after 6.45 will be too late for judging.—E. Thorp, sec.

Lowestoft and Dis. C.B.S. (radius, five miles from Lowestoft Central, G.E.R.).—Mon., March 4th, at the Fox and Hounds, London Road, 8.30 p.m. Important business; also fill vacancy on committee. Now fanciers, give us a look up. Anybody wishing to become a member will be heartily welcome. Please turn up in large numbers.—George Francis, hon. sec., South Wharf, Lowestoft.

Manchester and N.C.O.S.—March 4th, at Deansgate Hotel, 7.45 p.m. sharp. Pair Show; classes Norwich, Yorkshire, and A.O.V. and Mule; prizes awarded; 6d. entrance, 5d. sliding scale.—E. H. Jones, asst. sec.

Manningham C.B.A.—March 2nd, at Mowbray Arms, 8 o'clock. Important business.—E. Kemp, sec.

Middlesbrough and Teeside C.B.S.—March 9th, at Crown Hotel, 7 p.m. General meeting; balance-sheet.—Arthur Wake, sec.

Newcastle and Dis. C.B.S.—March 7th, at Lockhart's, 65, Grainger Street, at 7.30. Members and intending members attend.—Curry and Hutchinson, secs.

New Mills and Dis. C.B.S.—March 4th, at the L. and N.W. Railway Hotel, Albion Road, New Mills.—T. Forrester, sec.

Nottingham and Notts O.S.—Mon., March 4th, at Cobden Hall, 8 o'clock. Lecture by Mr. J. H. Scothern on "Crests."—G. E. Wilkinson, sec.

Preston O.S.—March 5th, at Tokio Cafe, Fishergate, 8 p.m. Novice Table Show of matched breeding pairs Yorkshire and Norwich; judge, W. Sherrington.—R. Seed, hon. sec.

Queen's Park and Dis. C.B.A.—March 7th, at Windsor Castle Hotel, Harrow Road, W., 8. To elect judge for Annual Show, and other important business.—J. C. Birch, sec.

Queensbury C.B.S.—March 5th, at Granby Hotel, 8 o'clock. Important business; all members attend. —S. Jagger, sec.

Rochdale Good Intent C.B.S.—March 2nd, at Temperance Club, 8 p.m. Essay by Mr. J. Lees, on management of the Yorkshire.—Sam M. Clayton, sec.

Rochdale O.C.—March 2nd, at Club Rooms, 8 p.m. Important business; Town Hall Show on March 11th; discussion on the Canary, breeding, pairing, and rearing of young.—J. Butterworth, sec.

St. Helens O.S.—March 4th, at George Inn, Water Street, 8 o'clock. Amateur Judging Competition; all members earnestly requested to attend.—Thos. Vose, sec.

Sale O.O.S.—March 11th, at Sale Hotel, Marsland Road, 8 p.m. Passing of rules; "Shall we join C.B.U.?"; and other business.—G. F. Hardcastle, sec.

Scottish British Bird and Mule Club.—Sat., March 2nd, at 142, High Street, Edinburgh, 3.45 p.m. Annual general meeting; presentation of medals, etc.—R. Farmer, sec.

Scottish National C.B.S.—March 9th, at Rooms, 142, High Street, Edinburgh, 7 p.m. Adjourned general meeting; classification and judges.—Jas. Winter, sec.

Sheffield and Dis. C.B.S.—March 7th, at Wentworth Cafe, Pinstone Street, 8 p.m. Table Show; matched pairs Yorkshires for breeding; champion and novice classes; judge, W. Oxley.—Bishop and Pilley, secs.

Shipley O.S.—Tues., March 5th, at Victoria Hotel, 8 p.m. Balance-sheet, etc.; a lecture by Mr. R. Halliday on Yorkshires, pairing, etc.; all fanciers cordially invited.—H. Dobson, sec.

South London C. and F.A.—March 13th, at Royal George, Tanner's Hill, Lewisham High Road, S.E., 8 p.m. Pair Show; annual report, etc.; birds staged 7.30 p.m., J. Robson, judge; fanciers invited.—G. A. Jeffreys, sec.

South Metropolitan F.A.—March 7th, at Headquarters, 8 p.m. General meeting.—A. Maddison, sec.

South-West London C.B.S.—March 14th, at Plough Hotel, Clapham Junction, 8.30. Mr. J. Robson has kindly consented to give a very important lecture, the title will be a suitable one, "Canaries for Beginners"; fanciers from every district cordially invited.—Lilley, hon. sec.

Stockton-on-Tees and Dis. C.B.S.—March 7th, at Leeds Hotel, 8 o'clock. Important business.—J. W. Lowes, sec.

Wallasey and Dis. C.B.S.—March 7th, at St. Mary's Schools, Liscard, 8 o'clock. To discuss scheme for improvement of the Fancy in Wallasey district; discussion on pairing, to be opened by S. Hadwin.—Wm. Mallinson, sec.

Wath and Dis. C.B.S.—March 3rd, at Cross Keys Hotel, 7.30 prompt.—H. H. Bramham, sec.

West London F.A.—March 7th, at Bush Hotel, 8 p.m. Annual Show matter.—J. Dewhurst, sec.

Wimbledon and Dis. C.B.S.—March 4th, at The Broadway, 8 p.m. Lecture on Crest and Crestbred Canaries, by Prof. Selkirk; all fanciers welcome.—W. H. Colman, sec.

Wishaw and Dis. Canary Show, Confined.—A meeting will be held on Saturday, March 2nd, at Watson's Hall, Young Street, 7 o'clock. Fanciers residing within four miles of Wishaw wishing to become members communicate with Wm. Robertson, 6, Brown Street, Wishaw.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Norwich Plainheads.—**J. H. Payne.** Yorkshires.—**H. W. Battye.** Crests & Crestbreds—**W. E. Greeves.** Cinnamons & Miscellaneous Canary Queries—**J. North.** Border Fancies—**J. Patterson.** Scotch Fancies—**R. Wright.** Lizards—**Barker Clegg.** Lancashires—**S. R. Compston.** Greens—**S. Hadwin.** Belgians—**W. B. Cobb.** Rollers—**F. A. Lester.** British Birds, Mules & Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c. Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S., M.B O.U. &c. Wild Bird Life—**H. Norman.**

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Cock Dropping Feathers (E.W.).—Your bird is no doubt casting a few feathers through being kept in the kitchen, but as you say he still sings well and is in good health, I think you will get him into breeding condition by the time you will want him. I should advise you to wait until the first or second week in April. Keep him below the level of the gas, and cover over at night with a warm cloth. Let him have a little egg food three times a week (about a half-teaspoonful), to which add 5 drops of Parrish's chemical food. Give twice a week a good pinch of maw seed. You will soon be able to procure young dandelion leaves. Give him two or three of these twice a week; be sure they are free from frost.

Seed Samples (S.L.).—The samples of Spanish canary are all very good indeed. There is not much difference between No. 1 and No. 3, but I think the former is a little better ripened and just a shade the bolder. They are equal in sweetness. Your members may consider themselves lucky that they can always procure such excellent seed.

Out of Song and Losing Feathers (New Reader).—Your Norwich cock does not sing owing to the fact that it is in a soft or cross moult. You have probably been keeping him huug up in the window. If this is the case, take him away at once, and put him in a cosy corner away from draught; hang the cage below the level of the gas. Cover him over at night with a warm cloth. Let him have in his drinking water, on alternate days for a fortnight, 10 drops of tincture of quinine. Three times a week give a piece of sponge cake, over which drop a small quantity of best sherry. Give occasionally a good pinch of maw seed.

Sample of Seed (W.R.R.).—The sample of canary seed is a most excellent one, being large, full, and very clean, and quite reasonable at the price you name. Your Norwich should do well upon it. I think you would have great difficulty in getting better.

Cock Husky and Squeaky (W.R.P.).—I expect your bird caught a cold on the journey, and as you say you only had him last week, you have not had time to tell whether your treatment will prove effectual or not. Give him another week or ten days, and if not better then write again, and I will advise you. Keep him away from draughts, and cover over at night with a warm cloth.

Pairing Query (R.N.E.).—Pair up your ticked yellow cock with the clear buff hen No. 8; the large buff cock No. 2 with the small marked yellow hen No. 7; the large buff green cock with the lightest marked buff hen you have; the small yellow green cock to the largest and lightest marked of the other buff hens, and the small yellow variegated to one of the two remaining hens. You will get a lot of greens and heavily marked young. You really want to introduce some more clears into them, but I presume you wish to make use of the material you have at hand. As you are going to turn your Britishers into an aviary, you can only let them pair up as they choose. This, in your case, will make no difference, as no matter how they pair should you be fortunate enough to rear any youngsters from them they will be valuable.

Blister Under Wing (W. James).—It is a difficult matter to tell what is the actual cause of these blisters arising in Canaries. I have seen them in young ones a week or two old. Your not being able to tell under what conditions the bird has been kept, and how it has been fed, somewhat handicaps me. In the first place give it a little egg food three times a week, to which add about half as much carbonate of bismuth as would stand on a threepenny piece. Continue this for a fortnight, and should this not cause an improvement give instead in the drinking water every other day, for eight days, 3 drops of tincture of capsicum.

Norwich Cock Not Singing (A.D.).—Your bird may breed although not in song, as you say he is in the pink of condition, and very lively. He is probably an old bird, but still, if he is as sprightly as you say, I see no reason why he should not fertilise eggs. I cannot recommend anything better than you have been giving. When you can procure a few young dandelion leaves let him have some of these, but be quite sure there is no frost on them.

Soft Since Last Season (Constant Reader).—Your hen evidently wants toning up a bit. Give her in her drinking water, for a fortnight, ten drops of tincture of quinine. Twice a week give a little egg food, to which add five drops of Parrish's chemical food, and as a change now and again give a piece of sponge cake, over which drop a small quantity of good sherry.

Paper Nest Pans (Reader 18 Months).—I should not recommend you to use the nest receptacle which you say you have moulded out of paper and glue. In the first place, they would be quite impervious to air, and would not be ventilated in any way unless you made holes in the sides or bottom, and this would considerably weaken such a frail structure. Then again, in the heat of the summer, with the additional heat of the sitting hen's body, I fancy you would find the glue would soften, and thereby cause some catastrophe. It seems to me like courting disaster to attempt to use them. Far better use the old-fashioned wooden boxes with perforated zinc bottom, or some of the nesting pans which are now put upon the market.

Hen Out of Condition (J.B.).—Give your hen, in two tablespoonfuls of water, a piece of sulphate of soda, about the size of a horse bean, twice a week for two weeks. Instead of using the mixed seeds, give only plain Spanish canary for at least six weeks, after which give twice a week a half-teaspoonful of the following mixture:—Hemp, German rape, and niga, with occasionally a pinch of maw seed. Give a spray or two of watercress twice a week, and occasionally put a piece of sweet apple between the bars of the cage.

Hen Dull and Lifeless (W. Munt).—Give your Norwich hen, in her drinking water, every other day for a fortnight or three weeks, fifteen drops of syrup of tolu and ten drops of glycerine. Keep in a cosy corner away from draughts, and take the precaution to cover over at night with a warm cloth. You may mix a little demerara sugar with just sufficient fresh butter to make it stiff, and put a little of this at the end of the perch for her to peck at, twice or three times a week. I think you are wrong in attributing the illness to the colour food.

YORKSHIRES.

Answered by H. W. BATTYE.

Canary Seed (Seed Sample).—The seed you send is a fairly good sample of Spanish canary seed, good in taste, and it seems clean and bright, fit to feed any kind of Canaries on. The price is reasonable.

Wheezing and Chuckling (W. H. Hunt).—Instead of the egg food, give your bird a little boiled milk sop, just what you think he will eat during one day. Mix with it six drops of syrup of buckthorn and a little moist sugar, and sprinkle over the lot a pinch of maw seed, giving fresh every morning. Take away the drinking water each night, and give fresh each morning, adding to it six drops of tincture of aconite and four drops of tincture of lobelia. Treat as above for ten days, and after that, instead of the syrup of buckthorn and milk sop, give a little egg food, and mix with it six drops of Parrish's chemical food, and sprinkle it with maw seed. Keep the bird in a cosy warm corner, free from draughts, and cover up at night.

Sex and the Bath (One of Your Readers).—Are you sure the bird you have is a cock? You do not state its age. If, as you say, he is in good health, he should be singing by this time of the year. From what you write I should fancy it is a hen. But if you are sure it is a cock, feed as follows:—Staple food, canary seed, with a little egg food. Mix with egg food six drops of Parrish's chemical food, and sprinkle on it a pinch of maw seed. Give this fresh every day. To get it to bathe put it in the same cage as the three hens you have, and I think when they bathe he will do the same. When he has got a start he will probably continue of his own accord. I have many times found this answer with individual birds that have seemed to be afraid of the bath. You might, if you doubt the sex of this bird, get some experienced local fancier to examine it, and give you his opinion. You must send your other query re Linnet to Mr. Weston; he will probably advise you on the matter.

Asthma (P. M. Cavendish).—Your two birds seem to be in a bad way, and will not be likely to improve much, I am afraid, until we have better weather. Many birds when they get the age of yours curl up and pant more or less when the weather is so cold and changeable as we have been having it since Christmas. The mixture you have been using is undoubtedly a good one, but in chronic cases only has a relieving effect, and sometimes a change to a remedy of a different character has a good effect. You might try the following treatment. Take the bird's drinking water away every night, and give fresh each morning, adding four drops of the following mixture:—½ oz. oil of eucalyptus and ½ oz. oil of cajapat. Stop the hemp, and give maw instead, along with summer rape. Give no green food for some weeks yet. Give a little mutton suet between the wires. Cover up at night and keep free from draughts until the more genial weather of spring arrives, when they will no doubt greatly improve.

Improvement of Colour (Cage Birds).—You may consider you have done fairly well at your first attempt as an exhibitor. A first, second, vhc. and c, along with a special for best bird, with seven entries, is not at all bad. What you require to improve the colour of your birds (which you say are practically all clear) is variegation, and this can be obtained by using a self-coloured green or Cinnamon bird, as the case may be, and mating it to one of your clears. The following season keep any lightly marked birds you may happen to breed, and again mate them with clears. One of the best ways to maintain the colour blood in a stud of birds is to make a practice of generally having one bird of any pair you breed with either ticked or marked. By this system you keep up the colour, with a chance of breeding a nicely-marked bird, and you avoid at the same time having a lot of heavily variegated young birds, and these are not required by an exhibitor.

CRESTS AND CRESTBREDS.

Answered by W. E. GREEVES.

Crestbred Hen With Stiff Claw (F. W. L.).—Your bird has what is termed a nerveless back claw, with which it has no power to grip, and never will have. This is not an uncommon complaint either with Crests or Crestbreds, but will not affect its breeding. Provide a round perch of medium size. Some prefer one with three edges, placing the perch in a position that one of the edges is uppermost; mind that the edge is not too sharp.

Crested Cock Losing Feathers in Crest (Green).—Crest feathers will drop out frequently at this time of the year, and unfortunately at other times as well. I do not consider a bird that loses his feathers in this way to be of a robust constitution; at the same time it would not affect his breeding. Feed on canary seed daily, German rape every other day, hemp once a week, egg food once a week; no other mixtures. Add to the drinking water a small quantity of sulphate of iron, just sufficient to colour the water. Do not throw the seeds on the bottom of the cage; put them in a separate pan. Feed the Crestbred hen as advised for the cock; but no green food, apple, or carrot in either cases. Give lime water to drink (which can be purchased at any chemist), fresh every morning for a week. If the droppings are then natural, give sulphate of iron in the water, say two days, then miss one, for a week.

BORDERS.

Answered by J. PATTERSON.

Various (Admirer).—I am delighted that you appreciated the charms of the wee Borders at the Palace. I have every confidence in recommending them to you by way of entering the Fancy again. They are undoubtedly the best variety to take up from a novice point of view. They are good songsters, very hardy, and very free breeders, easily managed during the breeding season, and are not very expensive. The time they will require most of your attention is while they are going through the moult, when they must be kept scrupulously clean. I shall be happy to advise you at any time.

Hen Unwell (A. G.).—Keep her in a quiet warm corner of your room. Be sure to cover her over at night, and keep her clear of all draughts. Give her as much milk-sop twice daily as she will eat, throwing away any stale left. Let fall on it every morning five drops sherry wine, and sprinkle a pinch of maw seed over it. Give scalded rape seed every other day. To prepare it see answer to "T. Williams" in last week's issue. A little egg food twice a week will be beneficial. Get from some bird-seed merchant a 3d. box of "Tibb's Quinella," and follow directions on top of same. Let her have this fresh every day for a week. After that replace with a piece of sulphate of iron the size of a split pea, in drinking water. Renew it every other day. She should come all right again. Are you sure your mixed seed and gravel are quite fresh and free from any musty smell? If you have any suspicious of the gravel, place it in oven in an old baking tin, and let it remain till thoroughly baked through. If of the seeds, either throw them away or pass through a sieve in a warm room. I have known many cases of illness resulting from above.

Unsatisfactory Moult (T. Dunn).—I should imagine that you kept him too long in breeding cage last year, and therefore his strength is run down and he has not been able to thoroughly throw off the effects of the moult. Keep him in a warm corner of your room, as advised "A. G." Let him have plain canary seed as his staple food; add a pinch of German rape every other day. Give this occasionally scalded, as advised "T. Williams" last week. On the days you do not give the rape seed let him have half a teaspoonful of egg food with a pinch of maw seed over it, and mix well through it three drops Parrish's chemical food. You might give (say, twice a week) a little hemp seed, and occasionally a piece of bread, soaked in scalded milk, and with five drops of sherry wine on it. Put a few shreds of saffron in his drinking water. I intend you to vary these three things, of course, when he may soon come all right. (2) From particulars, I should not say he would be in breeding form before the latter end of April. Whenever you see a few shoots of young dandelions, give him one or two leaves daily, first seeing that they are well washed and free from frost. Should this relax the bowels, a small piece of sulphate of iron will counteract same.

LIZARDS.

Answered by BARKER CLEGG.

Hen With Injured Leg and Weak Claws (A. E. P.).—Pleased to hear there is a decided improvement, and that your Lizard hen can now use the leg. You may discontinue the use of the iodine tincture. You say she does not properly grasp the perch with the hind claw. Well, I should say this is from the effect of the injury to the joint above. It will take a little time for the power to get in the claw. You may with advantage use a bath that is wired over, or a cage that would hold water half-inch deep, and allow the bird to walk in it. This is much better than holding the bird in the water. Give this bath morning and evening for a week. Have the water as hot as you can hold your hand in comfortably to commence with; add a little salt or brine on each occasion; or it would do warmed up again for a time or two. This will strengthen the claw. Change the perches and notice which appears to be most comfortable. Then you might cover them with cloth, which would prevent any slipping. I have known this treatment to be very successful with cases of this description. I think your hen will recover sufficiently, even if not perfectly, by the time for breeding, particularly as you say the bird is in good health.

GREENS.

Answered by S. HADWIN.

Green Cock with a Cold (One Year's Experience).—Add equal parts glycerine to your ipecacuanha wine and squills, and give regularly fresh each morning. You say your bird is improving, so you are on the right track. There is no doubt that as the weather gets warmer your bird will improve still more, and very likely, before the breeding season comes round (say the first week in April), he will be in full song and breeding condition. Continue feeding as at present, but add to egg food 12 drops of Parrish's chemical food.

ROLLERS.

Answered by F. A. LESTER.

Wanted, Probable Results of Breeding (Silliw).—There are several conditions that will have to enter into your calculations as to the result of your breeding with the cock bird you mention. First, to get youngsters as good as the father your hen, or hens, will have to be as good. Secondly, your progeny, if any, will (as all others do) have good, bad, and indifferent birds among them. Thirdly, When the youngsters are eight to ten weeks' old they require caging off and keeping fairly dark, to ensure getting a quiet level song from them.

Feather Eating, etc. (Novice B.).—You do not give me any information regarding your feeding, and this, and being pestered with red-mite, are the two usual causes of feather eating. Give the hen a good spraying with some water in which some quassia chips have been boiled and allowed to cool. Feed very plain on two parts rape and one part canary. Give as much Epsom salts as will cover a threepenny-piece in drinker, for one day only, and see how things go on. The other hen is evidently ready to breed, and should be mated up at once.

Breeding Condition (F. Hughes).—The growth you imagine is on the vent is simply that extension of the vent which in the male bird shows very prominently as he comes into breeding condition. Do not be alarmed; it is not dangerous in any way.

Presumably Indigestion (Oiseau).—I think your bird is suffering from indigestion. Discontinue the soft food (whatever that is) and give him two parts German rape and one part canary. Discontinue the Parrish's, and give instead a teaspoonful of the following mixture:—Pennyworth of simple syrup, pennyworth glycerine, pennyworth ipecacuanha wine, and one tablespoonful of whisky. Shake well before putting in drinker. Give him a breeding cage to fly in for a time, if possible.

General Ailments and Questions (W. Clayton).—Your Roller cock that twists his head about is possibly suffering from some kind of nervousness, that may go away with time; but it is certainly not catching. I do not know of anything that will cure it. Your results were very good indeed. A young cock would have shown some sign of song ere this. You should cage up all the known cocks, and then you will almost be able to commence breeding at once, as your hens appear ready. Change your feeding. This mixture will be more suitable: Two parts German rape seed, one part canary. Discontinue hemp and egg food.

Breeding in Outdoor Aviary and Separating Youngsters (My Golliwog).—Yes, the compartments the size you mention will be large enough; 11ft. by 4ft. by 4ft., divided in two parts, the cock and three hens each side. Divide by boards, as the cocks will pay more attention to the hens if they cannot see each other. You will not be able to put them out till the second week in April. A nursery cage, 1ft. square, will do nicely, and the parents will feed through the wires; bang a perch conveniently for them. Give the youngsters a supply of crushed seed and egg food when about four weeks' old.

To Mate for Beauty, etc. (Reader).—The young Roller cock will breed, I should think, and when buying a hen get one slightly variegated, and you should breed some pretty birds. I daresay the gentleman you mention will serve you properly. Yes, the Norwich breeding cage will be very suitable. When the birds commence to breed and have youngsters they will need some egg food and crushed hemp seed.

MISCELLANEOUS CANARY QUERIES.

Answered by J. NORTH.

Quassia Chips.—Can I put quassia chips in the bath for Canaries. Will they drink it and take any harm? How strong can it be made?—STRETFORD.

Yes, certainly; I have often advised this, and it is a valuable aid to keeping birds free from red-mite. There is no harm in it, but it is intensely bitter, and birds are not likely to drink much of it. A few chips that can be taken up with the finger and thumb are enough for half a pint of bath water. Perhaps a concentrated infusion might be of service. It can be made by steeping one ounce of the chips in one pint of hot water. Strain it off, and preserve in well-corked bottle. Mix a tablespoonful of it with half pint of cold water for bath. It will not keep long, especially in summer time.

Some Kind of Growth.—Year old Canary has growth at tail root, which looks like fat and is very yellow. A fortnight ago the centre contained matter, which I got out by pricking it with a needle. It seems in pain when excreting.—J.W.S.

From my point of view I cannot see that there is much amiss with your bird. The enlargement at root of tail is certainly a normal growth, being nothing more nor less than the oil-gland which secretes a fatty substance which the birds use in the repair, polishing, and general upkeep of their plumage. It certainly is not wise to interfere with it. As to the bird "straining and panting," that indicates liver trouble, and may in the early stages be remedied by the diet. Let the bird have a slice of sweet apple or boiled carrot, and some green leaves of dandelion, watercress, groundsel, or chickweed.

"A Twirler."—Cock Canary clings on cage wires, and turns its head and body backwards. Will this do him harm? How can I stop him? Am afraid it will affect his brain in time?—E.W.C.

Your bird is what is called a "twirler" or "twister." Some fanciers very much dislike this kind of deportment in their birds, while others derive pleasure from seeing their birds actively engaged in any direction. If you dislike it, arrange the top perch so close to the roof that the bird cannot easily perform the evolution. Another way is to make the uppermost spur of tobacco pipe or any other hollow tube, fixed so that it revolves on a wire passed through it. I do not think you need fear that the bird's brain will become affected. Give plenty of salad or sweet apple.

"Breeding Diarrhœa."—Hen Canary, when breeding, gets diarrhœa badly. It seems that the egg food disagrees with her. Is there any other food I could substitute to rear young? She reared one young—last year; forsook other nests.—TENBY.

This nesting diarrhœa is in many ways obnoxious, and often denotes a diseased state of the liver and kidneys. I should not advise anyone to try to breed again with such a hen. It is only "buying trouble." The only medicine that is at all likely to do any good is a crystal of sulphate of iron, the size of a split pea, in two tablespoonfuls of her drinking water. If you withhold egg food, I do not think this hen would cease to be troubled. But it is quite possible to rear young without egg food, and you would do well to get Dr. Creswell's book, "The Hygiene of Bird Keeping," to learn how it is done.

Breeding Queries.—(1) One cock, two hens. Is it better to run all together in double breeding cage, or to let him have one at a time? (2) What cock to put to Cinnamon hen for colour? (3) Have German hen. Could I expect any songsters by putting Yorkshire cock with her? (4) Two hens reared no chicks last season, though they hatched all right. I account for it by them sitting too close. Would you advise me to try again and let the cock stop with them?—J. H. WIDDOW.

(1) Two lady Canaries are not likely to agree together in one cage, and if it is necessary for the cock to have more than one mate let there be more than one breeding cage, or a cage with a centre partition. The best plan when breeding high-class stock is to have one cock to one hen in one cage for one season. (2) You cannot do better than pair a Cinnamon cock to a Cinnamon hen. If she is buff, he must be jonque (or yellow), and vice versa. (3) Yorks with Yorks, and German with

German would be better. (4) Every fancier is apt at finding excuses for the failing of his pets; but some dispose of such hens. I think you show the better fancier's spirit by giving them another trial. Let it be under different surroundings and circumstances, as advised to another querist.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

A Corn Bunting (Weekly Reader).—The best style of cage to keep a Corn Bunting in is the Finch stock cage, illustrated and described in the 1906 ANNUAL. It is of box pattern (wired in front only), and a suitable size for your purpose would be, length 18in., height 12in., depth 8in. There should be doors at the front and in the end, a seed-box running from front to back inside, outside water vessel, sand-tray, and two perches resting on the wood-work at front, which is made exceptionally deep, at least 4in. Most cage makers now stock cages of the pattern here described, and they are the most useful for all British Hardhills, being varied in size according to the intended inmate. If enamelled outside black and inside very light (electric) blue or green, they look very nice, and may be easily cleaned, especially if the front is, as it should be, a detachable (flat-bar) one. The principal food for a Corn Bunting is good sound canary seed. This should be varied with lightly-cracked hemp, shelled and smashed sunflower, groats, small wheat and oats, crushed, if necessary, summer rape, maw, etc. The bird must also have live (insect) food three or four times weekly; meal-worms in the winter, flies, smooth caterpillars, spiders, and anything similar in the summer, or as obtainable. If the bird will eat a little good insectivorous food, containing plenty of ants' eggs, as often as you like to give it, so much the better for its chances of thriving. Damp it with a little summer rape, which has been soaked in cold water until just beginning to sprout; or a very little grated raw carrot or finely-minced lettuce, or other green food. A good diet is needed, as many Buntings are apt to go off in a "decline."

Unduly Moist Excreta (L. H. C.).—There is probably very little, if anything at all, the matter with your Linnet. I have had many which acquired the habit of emptying their water-tins every day. They were always busy taking up the water in their bills, and then scattering it all over themselves and their cages, afterwards picking the drops off the wires of the latter and appearing very interested and amused by the pastime. Get a small quantity of tincture of gentian from a chemist, and make the drinking water taste just bitter of this. It will do the bird no harm, and may keep him away from the water-tin at such times as he is not really desirous of drinking. Write me again if necessary.

Blackbird and Canary (Cymro).—There is nothing at all unusual in the fact of a Blackbird, previously dense black in colour, assuming white flight and tail feathers. Such cases of partial albinism are, indeed, often met with. I doubt if anyone could tell you exactly why the bird chooses to turn himself into a freak. I can say this, however: your manner of feeding is singularly poor, and may quite likely have something to do with the case. Substitute finely-crushed puppy biscuits (or game meal without grit) for the bread-crumbs. Let him bathe freely, and put in his drinking water (every two tablespoonfuls) for two or three weeks a half-teaspoonful of Parrish's Chemical Food. This should enable him to pull round in decent plumage and form again. If you will read the rules you will note that queries for different specialists should not be mixed together. I do not answer Canary queries. Keep your bird cosy and out of draughts, and he will come through the cross moult in time. Give a little egg-food daily, and the Parrish's as recommended above.

What Birds to Try (New Beginner).—It really is quite impossible for anyone to advise you without seeing the birds. One has to judge of their disposition, and this cannot be done from a letter. Providing the birds are steady and in high condition (incessant vigorous song is a good guide to this), there is no reason why a Goldfinch, a Siskin, and a Linnet should not breed with hen Canaries. Usually they will do so quite freely. Singing hens are not looked upon with favour by the majority of fanciers; some will not have them at any price. Personally, I have used one or two without any hitch; they were German hens, kept for feeding purposes. As she produced only unfertile eggs last season, with a Goldfinch, I should try her this coming season with the cock Canary for a nest (or even two), and if she then proves unproductive of anything other than eggs, you can put her down as worthless for breeding purposes. I don't think, if I were you, I should keep the cock Canary in the same room as the muling couples. Generally speaking, it is very inadvisable so to do, though on certain occasions the temporary presence of a cock Canary is often found helpful—for instance, to try and induce a hen to "call" for the attentions of the cock bird. Then Mr. Finch, who, of course, is with her, gets his chance, and usually proceeds to take it. Many hens are shy at "calling" to a male British bird. But you need to be watchful afterwards, for when it is all over the hen frequently turns round and goes for the Finch with considerable vigour, and unless one interferes the feathers may fly. Probably she is annoyed at the deception, or he, poor chap, fails to really—but I must not waste time in idle speculation.

Right Class for a Crossbill (A. W. Smith).—In my own opinion the judge at the Crystal Palace Show (Mr. Cook) was quite right in accepting the Crossbill in the resident class, and passing it in the migratory one. Certainly the bird figures as a winter migrant in the N.B.B. and M.C. list. But this, I should fancy, is a slight error. It is generally accepted now that the Crosshill breeds with regularity in the pine forests of Scotland and Ireland. It is a winter visitor to the southern counties of England.

Food for a Starling.—Will you please state the correct food for a Starling? Any hints concerning them would oblige. Have looked up back numbers, but don't come across what I want.—W. CLARK.

What a treat to find a reader who looks up back numbers! Starlings are somewhat coarse-feeding birds, and many of the remarks made to an enquirer on Jays, etc., in this issue are applicable to these birds so far as concerns the use of table scraps. On the mixture of crushed dog biscuits (or puppy cakes, or game meal) with fine crissel (meat meal) they would thrive excellently. The Starling is fond of a little scraped raw meat, hard-boiled egg, fruit, finely-chopped green stuff, berries, worms, snails, beetles, and, in fact, most forms of suitable live food. You will have no difficulty in providing him with a good varied diet, on which he will live in health for a long period. When steadied down they make very nice, intelligent pets, and some learn to talk a few sentences, as the sayings of several Starlings accomplished in this respect which have been recorded in our columns go to prove. Their one fault (a fault shared in common with most large soft-billed birds) is their dirtiness when kept in a cage, owing to the copiousness and watery nature of the excreta. This necessitates constant supervision in the cleansing line, or an offensive smell will quickly arise, especially during the warmer weather. As a preventative of this I know of nothing better than a thick layer of peat-moss litter as a covering for the floor of their cage. It may be had from most corn dealers. Get it fine, if possible.

Concerning a Yellowhammer.—I have got a nice cock Yellowhammer. What is the proper food for same? Is it possible for it to pair with a hen Bullfinch for breeding?—SNODGRASS.

Yellowhammer Hybrids have yet to be seen; in fact, the Yellowhammer has never yet produced Hybrids with any bird, so far as I know from personal observation. It has certainly been recorded to have bred, but an accepted Hybrid has never, to my knowledge, put in an appearance on the show-bench. I don't know that a Bullfinch hen would be quite the most likely mate for him. If the mating were only successful, however, you would have put up a notable achievement, and have bred something worth a good few sovereigns. You can try your luck, certainly, if you feel inclined that way. I will say this—a cross between Yellow and Reed Buntings ought to be nice, and worth looking at; further, a cross between two Buntings seems more feasible than the other, theoretically considered. You are not at all likely to succeed in a cage; you need a large flight or small outdoor aviary to breed in. The Yellowhammer only shows any particular liking for canary seed when in captivity; consequently that must form the staple diet of the bird you have. I believe myself they find a difficulty in shelling most of the other seeds. Try your bird also with small wheat and oats (crushed if you like), groats, cracked hemp, shelled and crushed sunflower seed, maw seed, wild seed mixture, etc.; he may be tempted to take a little of one or the other, and the change will do him good. Rape and sunflower seeds, soaked in cold water until just bursting, likewise tempt many birds. Your bird should also have a little good insectivorous food every other day or so, and a meal-worm or two daily, with other insect food (flies, etc.) in season. Live ants' eggs are a great treat, and would be the most likely food to get him into breeding condition.

No Luck.—Hen Canary, two years old. Last season had no luck with her. She laid eggs on the floor, although she built a nest. Will she do any good this season? How can I bring Canary into breeding condition?—VERY ANXIOUS.

Female Canaries are not always consistent, and it does not follow that this coming season's work will resemble that of last. Perhaps we can re-arrange things for her ladyship, as, for instance, if she had a round tin nest pan last year, let her have a square wooden one this; and if she prefers the cage floor as a nesting place, let the box he placed there. As to bringing Canaries into breeding condition, they should naturally come so if properly fed and attended. Give a little egg food twice or thrice a week, and salad as it may be got, such as young dandelion leaves, sprouting rape, watercress, etc.

Treatment of a Nightingale.—I have a Nightingale which was brought from Italy, and has been fed on meat and crushed maize mixed. Could you tell me of food more suitable for it? I have tried a well-known insectivorous mixture, but it will not eat it. It will eat mealworms.—A.F.

Meat and crushed maize seem curious foods for a Nightingale to keep in health on. Still, some birds can be got to live on what sounds like an extraordinary diet. And, curiously enough, once thoroughly used to the latter, it is very difficult to break them from it. This fact probably accounts for your bird refusing the insectivorous mixture you mention, which I know to be an excellent stock food for Nightingales. You ought to have mixed just a small quantity with its old food at first, gradually increasing the amount until it entirely displaced the maize, etc. My own methods of keeping 'Gales and similar small insectivorous birds are as follows. As a stock mixture you cannot beat:—Powdered Osborne biscuit, three parts; best ants' eggs and dried flies, two parts each; meat meal, half part, by measure. Take the quantity required of this, and mix it just crumbly moist with grated raw carrot, or finely chopped lettuce, watercress, or chickweed (use young leaves only), or cold boiled potato, varying it frequently. It is necessary, of course, to give, in addition, all the live insect food (flies, spiders, wood-lice, earwigs, small beetles, smooth caterpillars, green fly, live ants' eggs, etc.) one can possibly obtain; mealworms given regularly are indispensable. To the above stock mixture I occasionally add, after damping, a teaspoonful or two of preserved egg-flake, or part of a hard-boiled fresh egg, finely minced, and, more occasionally still, a little finely scraped raw lean mutton or beef. Good cream cheese is a splendid food, too, given finely chopped, and mixed, of course, in suitable proportion with the above biscuit food. Ripe fruit should also enter into the menu, either grated or shredded, and mixed among the soft food, or stuck between the cage wires; banana, very ripe pear and apple, strawberries, grapes, elderberries, blackberries, etc., are all more or less appreciated—you will soon find out you bird's likes and dislikes. I had a Nightingale passionately fond of privet berries; I used to squeeze out the stones, and give him the fleshy outer covering.

Information Wanted about Bullfinches.—What is a good stock seed mixture for Bullfinches, both fresh caught and old cage birds? What green food and what wild seeds? What about the much-abused hemp seed—should they have any at all, and, if so, how much? I never found my Bullies care for privet berries, though brambles were, of course, ever welcome.—BULLFINCH.

A good stock mixture for Bullfinches at present would be:—Canary and teazle three pints each, linseed, and summer rape one pint each. In a finger drawer (or separate dish), however, the following would need to be given, in addition, to provide the necessary variety:—A small dessertspoonful of sunflower seed every day, except when giving hemp, of which each bird may have a teaspoonful once a week, say for a Sunday treat. In a tin you could keep a mixture of niger two parts, maw one part, and give a pinch twice or thrice a week. Then you have thistle, dandelion, and wild seed mixture, small feeds of which may also be occasionally given. Thus your bird can be provided with a "grateful and comforting" change in the menu almost daily. Hemp is a seed often very unjustly abused. Still, it is quite true it should not be given too freely to Bullfinches. For green foods give any of the following, according to season:—Shepherd's purse, dandelion, groundsel tops, chickweed, flowering grasses, watercress, lettuce, rape, or canary seedlings, etc. The seeding kinds may be freely given. Bullies are very fond of many berries. I don't remember ever having one which refused privet berries; on the contrary, they taxed my collecting capacity. Charlock, dock, thistles, hard-heads, etc., these birds are also very fond of. A little bit of apple and fruit likewise does not come amiss. Fresh-caught birds should always have offered (in addition to afore-mentioned stock mixture), soaked rape and sunflower seeds, if just sprouting so much the better. Further, lightly cracked hemp, niger, and maw seeds should be plentifully offered, gradually weaning them off the two former.

Linnet-Canary Mule Breeding.—Seeing you say Linnet Mules are such sweet singers, I am going to try to breed some. Have steady house-moulted Linnet and big yellow hen. How am I to treat them?—H. OWEN.

You seem to be starting in good fashion, and ought to experience little difficulty in achieving your aim—that is, to breed some good Linnet Mules. The best mixture for a Linnet now is: canary and teazle four parts each, summer rape two parts, charlock one part, and linseed one part. Give a pinch of hemp one day, maw the next, and inga the next. You should gather shepherd's purse, flowering groundsel, chickweed, dandelion, etc. All these are very valuable in getting one's birds into high breeding condition. Note other replies this week. The hen Canary ought not to have the same mixture as the Linnet. Plain canary seed should he given her, with about a teaspoonful of summer rape on alternate days. When not giving the rape let her have half a teaspoonful of hemp; then the same quantity of maw and inga mixed (equal parts). This will give variety, and he quite "foreing" enough. A little egg food twice or thrice a week can be commenced about the middle of March. But be guided by the condition of your Linnet; you don't want the hen to commence laying eggs before he is "rank," or they will of a certainty be clear. His beak will be blue-black, and his song very vigorous and free when he is in right breeding condition.

Jay and its Management.—After my visit to the recent Palace Show, I have the intention of keeping a Jay and Magpie. Put me on the right method of feeding them, please.—GARRULOUS.

It is not a difficult matter to keep a Jay in health, providing he is kept very clean, housed in a very big cage, and well fed. See the perches are of suitable thickness (about like a broom handle), varying them a little in size, and give the bird a long jump from top to bottom of cage. When quite tame, let him out for brief excursions in the house (not necessarily in the drawing room). The best and cheapest way to feed is to utilise table scraps largely. As a stock food, you could use broken-up dog biscuits or puppy cakes (or game meal), with coarse grissel—say two parts of either of the former to one part of the latter (by measure). Moisten with hot water, giving it crumbly moist, and mixing with it table scraps, cooked meat, and potatoes, greens, gravy, etc. Give a few trapped mice, young Sparrows, and the like (even young frogs, if you can capture them), but not over much raw meat. You will find them very accommodating in the matter of food. Eggs (raw and cooked), acorns, beechmast, nuts (cracked) of various kinds, peas, berries, fruit, worms, beetles, grubs, and butter are other things they will eat. Peat moss litter is very good stuff indeed for the floor covering of the cages of large soft-billed birds.

Feeding a Goldfinch Mule.—Have just come into possession of a good singing Goldfinch Mule, and I want to feed him properly.—W. JAMES.

A good seed mixture for a Goldfinch Mule (or Linnet or Greenfinch, for that matter) at this season of the year is:—Canary two parts, teazle one part, hemp and summer rape half-part each, maw and linseed quarter-part each. In the hot weather reduce the hemp and linseed, and increase the teazle. Any of the special Finch or wild-seed mixtures advertised in our columns will make a good and acceptable change, given twice or so a week. A little sunflower seed once or twice a week would also be sure to be appreciated. Any of the usual green foods may be given, flowering groundsel (not coarse leaves), chickweed, shepherd's purse, dandelion, lettuce, watercress, etc. The three first mentioned may be given practically ad libitum. All Mules are very fond of shepherd's purse.

Clipping a Bird's Claws.—I believe my Mule's claws want cutting; they look very long and curved, and seem in its way. Is there any difficulty in doing it?—ANXIOUS.

Catch the bird and place it on its back in the palm of the left hand, holding it gently but firmly, taking care not to squeeze it. Let the thumb fall over its throat, and the third and little fingers (or middle and third, as most convenient) each side of its legs, the latter projecting between them. It will then be easy to get at the bird's feet and claws. The latter should not be cut too close to the toe, or they will bleed, and likewise hurt the bird. Roughly speaking, a tiny blood vessel runs into the nail from the toe for about a quarter of an inch (in a small bird), and one needs to always cut outside this. If a bird has white nails (like most Canaries) this blood vessel can be plainly discerned on holding the foot to a good light. Use a pair of sharp scissors, cut quickly and firmly, and this often times necessary operation is easily performed. It is not at all difficult, in fact, and quite painless, when properly done.

The Waxwing, and Some Points Concerning It.—(1) What are the principal points to consider in selecting a Waxwing for exhibition, and what class are they usually entered in? (2) What is its chief food, and how should it be treated generally? (3) What time of the year are they usually imported, and why are they called British?—AUCKLAND.

(1) The first points are size and shape. The bird must be as large as possible, and be well proportioned. The most general failing is to have a head and neck too fine (not bold enough) for the body. The next point is colour, which must be rich and dense; some birds are very "ashy" in this respect. As regards markings, the "bib" (throat mark) should be large and well-defined, and dense, glossy black in colour; the waxlike appendages on wings and tail must be as conspicuous and bright as possible; the crest large and perfect. I think written descriptions are never of much value, however, and you would do well to see a good specimen or two at one of our large shows. Then you would get the "ideal" fixed in your "mind's eye." And Waxwings vary astonishingly. They must go into the insectivorous classes, but precisely which one has to be determined from the schedule, most shows differing in their classification and its wording. (2) The Waxwing requires feeding on a good insectivorous mixture. A suitable food is made of game meal (without grit), or finely crushed puppy cakes, six parts, ants' eggs and dried flies two parts, meat meal one part, by measure. Damp with a little water, cold boiled potato, grated raw carrot, finely chopped watercress, lettuce, chickweed, etc., varying them frequently, and according to the season. Add half a hard-boiled egg to the daily food portion occasionally—or a teaspoonful of preserved egg flake. Give a few mealworms daily, and any other insect life as in season (see other replies this week). They are enormous feeders, and being indolent and neglectful in the matter of taking exercise, usually manage to get as "fat as pigs." A mild dose of sulphate of soda is useful occasionally; also a fly round a good-size aviary or room. Fruit, such as banana, sweet orange and apple, grocer's currants, raisins, etc., chopped figs and dates, is much relished, and should be frequently given mixed with the stock food. Berries, too, the bird is passionately fond of, and black, privet, elder, haw, etc., should be freely given whenever obtainable. Plenty of variety in the diet is absolutely essential. I remember a well-known exhibitor of this species saying he gave his birds crushed canary seed and coarse oatmeal. I have never done so personally, but should not hesitate to try, and should add maw seed too—mixed, of course, among the soft food. Let it bathe freely. (3) The winter is the time they are most freely imported, though odd lots are frequently on sale at other times. Why are they called British? I give it up. Plenty of Waxwings visit Britain, however, and are no doubt caught here. It is a winter migrant.

Feeding Muling Couples.—I have Goldfinch and Greenfinch and Canary muling couples, and shall be glad if you will tell me how I ought to feed them until breeding time comes round.—A. OLIVER.

If you are keeping cocks and hens together, it is always somewhat difficult to suit the needs of each. As I have often said, muling hens, when a first round of Canaries is not being taken, want keeping back in condition as long as is possible. To give them the run of the Finch's stimulating diet tends, of course, in the reverse direction. It is for this reason that the double breeding cage is so advantageous to the Mule-breeder. However, the Greenfinch-Canary couple is not difficult to cater for. They will do well on canary and teazle, equal parts, and a little summer rape, which seeds will not hurt the wife. Give a little maw, inga, and hemp now and again in a finger drawer, or throw on the clean sand. The Greenfinch will have to have some sunflower daily. He will shell the latter easily enough, whereas the Canary will experience some difficulty in doing so, and so is not likely to overgorge herself on it. I do not care to keep Goldfinches without a free supply of hemp, and, of course, his mate is certain to help herself freely to this. The best plan, if one can manage it, is to give canary, teazle, and a little rape (as mentioned previously) in the hopper, and twice or thrice a day give a feed of hemp in a finger drawer. Mr. Goldie is sure to go to this at once and fill himself out with it, when there will be but little left over for his wife. Of course, you will give him also maw, inga, etc., now and again. Look out for dandelion heads and young, tender leaves—a free supply works wonders in getting all muling Finches into prime condition. Give also flowering chickweed, groundsel, and shepherd's purse—these should be freely used, taking care to remove all traces of frost from them, if any. If cock and hen are kept separate, then the Canaries simply want the plain diet mentioned in other replies this week.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Java Sparrows, etc.—What is their correct diet, and how can I tell sex? What Foreign Birds can I keep with Gold, Pied, and Bullfinches, Canary, and Redpoll?—"BIDOBA."

Canary, millet, oats, and paddy rice (rice in the husk); green food, grit, cuttlefish, and water. A little of some good soft food mixture must be given when they have young to feed. The sexes are very alike outwardly, the only difference being that the hen has a slightly narrower and more pointed beak than the male, fairly easy to discern when you thoroughly know the species, but not easy at first; it is most distinct when the birds are viewed in profile. You have one bird which is dangerous for a mixed series, viz., the Pied Finch, or rather Chaffinch. The Javas would agree well enough with the others, as would also Zebra, Cut-throat, Spice, and Ruficauda Finches, Silverbills, Bengalese, Mannikins, etc., which would all thrive on treatment given above.

Sex of Cockatiel.—My bird was sold to me as a young male out of colour; the underside of tail is mottled and handed with yellow, and its head plumage is the same as the hen; it is about a year old. Can you tell me which sex it is?—M.R.R.

The young of Cockatiels resemble their mother while in immature plumage, but even in this stage the crest of the young males is generally much yellower than that of the young females. It appears to me that your bird is a female, though it is possible that it is a young male, but this will be fully apparent after the next moult, and you ought to be able to ascertain this even at the present time by a comparison of the bird's crests. They do not breed till they are two years old.

Parrakeets as Pets.—(1) Which of the following: King, Pileated, or Blossom-headed Parrakeets, will make the nicest cage pets? (2) Can these birds be kept in a healthy state without boiled seed?—"DONALD."

(1) It is a matter of taste. Taming some Parrakeets is a work of time. However, there is this redeeming feature, that they are sociable birds, and sooner or later return, kindly, patient care by their confiding and fearless demeanour, and also by taking liberties with you. Perhaps the Blossom-head would suit you best. Get young birds, and they will then become tame more readily. (2) None of these birds need boiled food. Diet:—Canary and white millet two parts each, and one part each of wheat, dari, and white sunflower seeds, also green food, grit, cuttlefish, and water regularly. The other birds you name are also very handsome and showy birds, and either would fully meet with your requirements when properly tamed.

Grey Parrot Pulling its Feathers.—My Grey, otherwise healthy, and talks well, picks itself bare round the neck and breast. How can I remedy this?—M.I.

The ground of your query has been fully covered in replies to other correspondents. Note same carefully, both queries and replies, compare with your own case, and you should be in no doubt as to treatment. You must bring your diet into conformity with advice given. If there should be anything you do not understand, repeat query, and give full particulars as to your dietary.

Breeding Parrakeets.—Please state what species you think would breed in my aviary 22 by 10 by 10 feet high, half of which is the shed portion? What is their food and general treatment?—E.S.B.

Do not overcrowd or attempt to fill up your aviary at once. Pairs of the following:—Red and Mealy Rosellas, Blossom-heads, Red-rumps, White-eared Conures, Cockatiels, green and yellow Budgerigars, and Madagascar Lovebirds. You must put up cocoa-nut husks for the Budgerigars and Lovebirds, and concave bottomed nest boxes, say 8 by 10 by 8 inches high, for the larger birds. You must have at least double the number of nesting receptacles that you have pairs of birds. You must not put

THE CANARY BREEDING SEASON

Will soon be with us and all who contemplate cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries :—

HOUSE'S CANARY MANUAL

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL." The following Summary of Chapters, etc., will show you how completely the ground is covered:

Aviaries and Cages.
Show Cages.
Perches.
Breeding Canaries.
The Young Birds.
Food for Nestlings.
Hens Refusing to Feed.
Sweating Hens.
Young Birds Dead in Shell.
Red Mite.
Clear Eggs.
Moulting.
Exhibiting.
Diseases (treated very fully).
Every variety of Canary is treated upon at length and illustrated.

Mr. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

FIFTY COPIES of the Third Edition slightly soiled—9d. each to clear.

out your birds till May, unless you can get some which have been out of doors all the previous summer. It would be better to have two mixtures, each in a separate hopper, and to prevent quarrelling have several food hoppers in various positions about the aviary. Mixture 1:—Canary and white millet in equal parts. Mixture 2:—Oats, hemp, wheat, dari, rice in the husk, and sunflower seed in equal parts. You must also give green food, ripe fruit, and continuous supplies of grit, cuttlefish, and water for drinking and bathing. Note.—Some of the larger Parrakeets do not settle down to breeding during their first season in the aviary, but usually do so during the following one.

Budgerigars.—(1) What is the right time to breed? (2) What size cage is required for breeding? —H.E.

(1) Say from April onwards if the season be an early and genial one. (2) The minimum size should be 24 by 18 by 18 inches high; it should be of the box pattern, and have a husk fixed at either end. I have given minimum size, but it would be much better six inches higher.

Grey Parrot and Biscuits.—(1) I feed my bird as you advise in CAGE BIRDS, and it has contracted quite a liking for biscuits. How many can I safely give him? (2) I suppose "Osborne" or "Oswego" are the best to give him?—"RED-TAIL."

(1) A couple of biscuits daily may be given without any fear of harm; in fact, all my Parrots and Parrakeets are very fond of same, and thrive upon them. It is messy slops, table scraps, buttered bread and toast that works mischief with these birds. (2) Any make of plain biscuit would answer the purpose, but the first of those you name is perhaps as good as any. Hope your bird will continue to do well.

What Bird, etc.?—(1) From description herewith, what kind of Parrot is my bird? (2) Will letting it have a fly round interfere with its talking capacity in any way? (3) It has lost a lot of feathers, but others are coming in their place. Must I give special diet at this time?—C. E. SWINMERTON.

(1) It is the Indian Ring-necked Parrakeet (*Palæornis torquata*). (2) Letting it having a fly round your room will not interfere at all with its talking capacity; it will certainly help to keep it in health and condition, by supplying needful exercise. At the same time I do not suppose he will make much use of his talking powers while at liberty—will be more likely to sample your furniture and wood fittings. (3) Your bird is in the ordinary moult, and as it is freely reproducing its feathers you have no cause for anxiety. Let it have a continuous supply of cuttlefish, and it would be a help while the moult lasts to slightly colour its drinking water with Parrish's chemical food. I should not give the spirit of nitre daily, only occasionally; neither should I give the sopped bread even though it appears to relish this; it will soon become accustomed to a dry crust or biscuit. I find several of my birds very fond of a small piece of dry toast at teatime; it is just slightly browned and prepared freshly for it, but no butter or anything is put upon it. The bird likes it, and it certainly does no harm, though perhaps not quite orthodox.

Perch for Grey Parrot (J. Finlay).—In my previous reply the advice I gave you covers all details save that of perch. The width of your perch is absurd for a Grey Parrot. Take it out, and put in its place one only threequarters of an inch thick. When you have rectified the perch, the trouble with your bird should soon disappear, your present perch being too thick for the bird to get any grip on. The bird will not starve while seed is on the sand tray, so only fill its hopper daily, and if it scatters some leave it to pick up its food from the cage bottom for the remainder of the day.

Excessive Excreta, also Grinding of Beak (A.S.).—You will have to send me full particulars as to how you are feeding and treating your bird, also how long you have had it, before I can give you any material help. In the meantime, look back through our last two issues, and compare Parrot queries and replies with your bird's condition, and treat accordingly. I can only advise you to keep it warm and strictly out of draught. Give it, for one day only, half a teaspoonful of tasteless castor oil on a crust of bread, piece of sponge cake, or any other absorbent food the bird eats. If it is at all weak, put two or three drops of brandy or whisky in its drinking water.

Young Grey Parrot Eats Only Canary Seed (J.D.).—Your dietary is a very safe one, and so long as you do not give it table scraps, tea, coffee, milk, or animal food, it should continue to do well. Do not "coddle," but keep the bird out of draught. Canary seed is a very safe and wholesome diet for a Grey Parrot if they eat sufficient of it; at the same time, I should continue to put a few oats, hemp, etc., with the mixture, but let the mixture be composed of two-thirds canary, and one-third oats, hemp, dari, and wheat. Limit your "everything" to boiled potato, ripe fruit, plain biscuit, green food (lettuce in winter), nuts; with cuttlefish and water continuously. Let it have a bath, or spray it once a week while the winter lasts; guard carefully against draught till dry. In case of constipation make its drinking water just saline with Epsom salts; one dose should give relief; otherwise do not give drugs to a healthy bird.

An Elucidation (Sheffield).—I am interested in learning what your birds are. It was the length you named that stood in the way of naming them. The Orange-flanked Parrakeet is fully eight inches long. Glad to know you have made a good sale. They are not at all rare, though there are fairly long intervals in which none come to hand. Habitat: Peru and Ecuador. They soon become tame, and are interesting birds, but have a very noisy and almost continuous chatter. The head of the Orange-flank is bluish-green, not opal blue; possibly yours were immature birds.

What Parrakeet? (Adelaide).—Your bird is the Adelaide Parrakeet (*Platycercus Adelaidæ*), and is somewhat similar to the Pennant, but not nearly so rich or intense in colouring. It is, however, a very handsome and beautiful species when in good condition. It is distributed over Central and Southern Australia. Diet:—Canary, millet, dari, hemp, and oats, pea nuts, ripe fruit, and green food, such as grass in flower, chickweed, etc. Most of the Platycerci are fond of insects and mealworms, and such may be given to this species without fear of ill effect when kept in an aviary; when confined in a cage such should only be given occasionally. At moulting time a few should be helpful. They are hardy, and may be kept out of doors all the year round.

To Catch Java Sparrows in an Aviary (F. L. Hill).—(1) Construct a light framework of wood, with a door which you can drop by a piece of twine from a distance. It must be covered with wire netting, and large enough to hold the food vessels. Leave the door tied up for one day that the birds may feed undisturbed. Afterwards there should be no difficulty in dropping the door upon them while they are feeding. (2) I prefer the distemper; but for the unpainted wall am of the opinion that limewash would be the best. The distemper has the better appearance, a light olive-green being very effective.

Cockatoo with Rough Plumage (C. Mason).—To the advice I gave you some months ago I can only add:—Give it a little boiled maize daily (it only keeps fresh one day), and drop on to same ten to twelve drops of Parrish's chemical food. Also see that its bowels are kept freely moving, not loose, by an occasional dose of Dinneford's magnesia. A little green food (fresh lettuce is wholesome) should be frequently given, also liberal supplies of cuttlefish. A bird that has been in the condition of yours for two years will require lengthy and patient treating as above, and by all means, in addition, treat with quassia solution, as per communication you refer to. If there are any sores, first wash with chilled water, and then anoint with spermaceti ointment.

Another Feather Plucker (A.D.).—As you give me no details as to diet, etc., it is impossible for me to say more than that you must keep its bowels freely moving, not loose, by an occasional dose of Dinneford's magnesia. Also put it on a course of Parrish's chemical food (see other replies), and give it daily supplies of cuttlefish, or rather keep a piece of same continually in its cage. If you are not dieting your bird as advised regularly in this column, while not advising any sudden change, it should gradually be accustomed to same. Do not on any account give bread or toast and butter, tea, coffee, or milk slops, or any kind of animal food whatever. Spray the hare parts regularly with strong quassia solution. This must be persevered in; improvement is always slow in these cases.

Cordon Bleus.—My hen is losing her feathers, in fact, becoming quite bare. Is this likely to be infectious to the cock, and what is the remedy? —FOREIGN BIRDS.

Keep this bird as warm as possible, and just colour its drinking water with Parrish's chemical food. Diet:—Canary, white and spray millet, green food, grit, and, if they will eat them, one or two mealworms each bird daily. Also give a little soft food, and well dust same with flour or flowers of sulphur. The soft food should consist of equal parts of ants' eggs, crushed Oshorne biscuits, and sponge cake, made crumbly moist. The male may be pecking his mate, or there may be mites in their cage; this you can ascertain by observation. If the male is plucking her, you will have to cage her up separately till her plumage is grown again; and if there are mites about the birds spray them with quassia solution. If you can do it without unduly scaring the bird, catch it and rub in a little clean vaseline. This will prevent her skin getting too hard; at the same time, it ought not to be what you would call greasy. Tender lettuce is the best green food at this time of year. Let the birds have their bath regularly, but see that the chill is taken off the water, and that their cage stands in a warm position and is out of the way of draughts.

Bulbuls, etc.—Please give food and treatment for Indian Bulbuls. Please name a good book on Foreign Birds. How must I treat Cordon Bleus—I have lost ten out of twelve?—Q.

You do not say what species. They are not common birds in the English market, the White-cheeked being perhaps the more common; but the Red-eared, Red-vented, Black, and White-eared, all come to hand occasionally. They are handsome birds with a fair power of song, varying from a mellow chirrupy warble to a fine and rich melody in White-eared (Persian variety). Diet:—Some good soft food mixture, ripe fruit, live insects, and a little seed mixture (canary, oats, millet, and sunflower). Greene's "Favourite Foreign Birds," 2/9 post free from CAGE BIRDS office, I think you would find helpful. Cordon Bleus are unfortunately notorious for their delicacy on arrival in this country, and many losses with new purchases are the common experience of all, but such as survive become hardy and long-lived. You are treating correctly. Pekin Robins will not harm your plants, neither your other birds. There is one solitary instance of their having bred in this country, and the said pair were flying loose in a conservatory, building their cup-shaped nest in a large growing bush.

St. Helena Waxbill, etc.—(1) How can I sex St. Helenas? (2) Will a hen Zebra pair up with any foreign Finch?—C.G.P.

(1) The outward sexual distinctions are not very striking, but when adult the ben has less rosy-crimson on the abdomen than the male, she has a shorter and more pointed beak, and is also slightly smaller than her mate. (2) You would stand a good chance with either of the following:—Bicheno Finch, Bengalee, Silverbill. Why not try the Silverbill? It is a cheap bird, and the resultant Hybrid should be a handsome one. Though odd foreign birds frequently pair up, but few Hybrids are really reared (this should, however, add spice to your endeavour), several such unions in my aviary the past season only resulting in eggs. Probably if they had less company they would have actually reared, several of the eggs being fertile.

Mice in Outdoor Aviary.—(1 and 2) I have found a nest of mice in my aviary, and several birds with claws bitten off and otherwise mutilated. How can I get rid of them? (3) What is the smallest size cage Budgerigars will breed in? —R.L.C.H.

(1 and 2) It is the Budgerigars and not the mice that have been responsible for the mutilation of your birds. But the mice should be kept down as far as possible. Make use of the "Virus" advertised in our pages, using same according to makers' directions; it is quite safe. These pests find their way into almost every outdoor and indoor aviary sooner or later. In your case get some half-inch wire netting and let it into the ground so, L; it should go in 18 inches, and extend outwardly for 12 inches. This, combined with an occasional use of the "Virus," should keep you free from the pests. (3) I should not advise a smaller cage than 24 inches long, 14 inches from back to front, and 18 inches high. It should be of the box type, furnished with two cocoa-nut husks, and should have a metal draw tray.

Collar for Grey Parrot.—Where can I get one of these? My bird has always been in good health, though it picks its feathers and is somewhat bare. Diet:—Boiled Indian corn, bread and butter, and cayenne pepper on a chicken boac. How can I cure it?—"ANXIETY."

Any of the Parrot cage makers advertising in our columns will supply you with one. It must fit your bird's neck loosely, and should be of hollow zinc, all edges being rounded off so that there is no chance of it chafing the bird's neck. It must have some kind of secure fastening, and from the front must dangle, say, six inches of light steel chain. Personally, I have always avoided the use of these things by giving a proper diet. Give your bird the dry seed mixture regularly advised in this column for Greys, as well as the boiled maize, and when you note it eating of the mixture freely, gradually discontinue the maize. Stop at once the bread and butter and chicken bone. Do not give slops, buttered foods, or any kind of animal food whatever. Persevere with the quassia solution, and give Dinneford's magnesia and Parrish's chemical food, as advised to several other correspondents in this issue.

Maimed Birds.—In my aviary, 18 by 10 by 6 ft. high, I have 28 birds, as per list enclosed; are there any dangerous ones among them, as I have several birds with broken legs? What others can I add up to 40?—G.R.M.

The dangerous birds in your list are as follows:—Budgerigars, White-headed Lovebird, Chaffinch, and Bramblefinch, and I should remove all these. The Budgerigars are the culprits as to your maimed birds; possibly the Lovebird helped. These birds are never safe for long together with other birds. Put in another hen Canary, and possibly you may get Hybrids from your Bullfinch, Siskin, and Linnet. Zebrafinches, Silverbills, Diamond, Pectoral, Yellow-rumped, and Long-tailed Grassfinches; Zebra, Orange-cheek, St. Helena and Grey Wagtails; Common and Green Avadavats. You would have room for pairs of each, the last five species being very small. Or, if you preferred them, you could substitute Bengalese, Bronze-wing, and other Mannikins in place of any of the above. But you would find the first-named a very handsome selection.

Rosella Ailing.—My bird appears to have "stuck" in the moult; its feathers hang loosely, and it is often picking at them.—F. M'DONALD.

Your bird is in a thoroughly bad way. Cease your present diet, and feed as follows. Get one quart canary seed, one pint oats, half-pint each dari, hemp, sunflower seeds. Well mix, and let this be your staple diet. Give in addition ripe fruit (apple is appreciated), green food, grit, cuttlefish, and water ad lib. for drinking and bathing. Still continue to spray with quassia while the bird picks itself; if it has any sores anoint these with spermaceti ointment. Give the bird three doses of tasteless castor oil, with a seven days' interval between each—half-a-teaspoonful in its drinking water. Put it on a course of Parrish's chemical food; just colour its drinking water with same, but not on the days you are giving the castor oil. You must only use a glass or china vessel while giving drugs. Continue the above treatment till in condition again, which will be some little time with a bird in the condition yours is.

GENERAL.

Can Only Use a Tar Brush (Sidney Stubbings).—Will bear your observations in mind.

Jealousy (Harvie).—Don't distress yourself unduly over such an incident, and don't waste your money paying for any more unstamped letters.

Challenge (G. E. L., Bath).—Certainly. Challenges are regarded as advertisements, and must be paid for as such.

Judges' Initials (C.R.S.).—No; the feature has not been dropped. As soon as the judges for each event are decided we should be advised of same.

Plate (Mayhull Linnet).—No, we have no such plate as you require, but we have a plate of Goldfinch and Bullfinch we can send you on receipt of sixpence.

"Bird Made Well" (W. H. Cook).—We are delighted to know that our Mr. Lester's advice proved so effective. May your bird continue in good health to the end of its days.

Licence for Bird Medicines (F. Cockerill).—We know of no special licence required for vendors of patent medicines for birds. The same licence as covers the sale of one patent medicine would cover the sale of another.

Rollers at the Palace (James Marsh).—It is against our rules, which in this respect coincide with every other Fancy paper, to allow criticisms on show reports. Reporters, we fear, are very human people, and therefore liable to err. We cannot believe that our reporter made the indiscreet observations you attribute to him.

BURY AND DIS. C.B.S.

Usual Montbly Meeting, February 12th, Textile Hall, Bury, a good number of members attending. A lecture was given by Mr. Bancroft, of Bolton, on the Goldfinch, and was accorded a hearty vote of thanks, on the motion of Mr. Wolstenholme, seconded by Mr. Ramsbottom.—W. P. TURTON (Sec.).

BRAMLEY AND DIS. O.S.

Monthly meeting at headquarters. The balance-sheet was presented, which showed a balance in hand of £5 11s. 11½d., which, considering the slight loss which we had on the Open Show, owing to the bad weather, we consider very satisfactory. A Pair Show was held, Mr. W. Richmond (Rodley) judging. Norwich: 1, 2, J. R. Cave; 3, Arthur Tate. Yorksbire: 1, B. H. Wilson; 2, H. Parker; 3, Thos. Robinson.—JAS. METCALFE.

INVERNESS O.A.

Annual general meeting, Washington Hall, on February 9th, Mr. Murphy (President) in the chair. Annual show report proved very satisfactory, the drawings amounting to over £81 14s. 6d., expenses £1 3s. 5d., balance, as per credit account, being over £80. After all being cleared off, a substantial balance was recorded for ensuing year. The Society is in a very flourishing condition. Three new cage bird fanciers, viz., G. Mackenzie, Mr. Douvard, and J. W. Mackenzie, were added to the Committee. Mr. Sanderson was elected President, G. Macalpine Vice-President, and A. Urquhart re-elected Secretary.—A. URQUHART, Secretary.

DERBY C.B.C.

Summoned meeting, Derwent Hotel, February 23rd. There was a good attendance of members, over which Mr. W. H. Eley presided. The meeting was called to make arrangements for the "Jubilee" show of the club. Members' classes were considered first, and 17 were agreed to, after which 38 classes for open competition were decided upon, subject to additions. Members evidently seemed bent on doing their best to bring the show to a successful issue on November 26th and 27th. Mr. J. Harlow was elected a member of the club, after which a discussion arose anent the meeting of C.B.U. at the Palace, Rule 17 coming in for severe criticism. The secretary was instructed to summon a meeting for March 9th, to consider the Rev. Lawton Platt's offer.—W. H. BAMSEY, Hon. Sec.

Y.C.C. OF IRELAND.

Committee meeting, held at 24, Gardeners Place, Dublin, on 21st inst. Mr. Devitt, Chairman, presided; present six members. Mr. Duiguán, Treasurer, submitted the accounts and balance-sheet for year, which had been audited and found correct by Messrs. Lambert and Emoe. It was carried that the accounts be adopted, and that same be printed and sent to members. A balance to credit of the Club of £1 10s. 2d. was shown. It was proposed by Mr. Hennessy, and seconded by Mr. Duignan, and passed unanimously, that the club advertise their show in CAGE BIRDS. There was a general conversation about a cup for non-fed classes, and it was agreed to get the opinion of the country members on the matter of a subscription list to get a new challenge cup. It was proposed to let the present cup go to the non-fed classes. The meeting adjourned until Thursday, 28th inst.—W. C. SHOLEDICE, Hon. Sec.

SCOTCH FANCY CANARY NATIONAL DERBY O.A.

The executive have commenced the business of the year by issuing to last year's members (and others) membership tickets for the current year. The annual subscription is 3s., which entitles each member who joins before May 31st, 1907, to exhibit eight Scotch Fancy Canaries, as specified in the rules. The cup having been won by Mr. McLennan in 1906, a movement is on foot to have a new cup. An encouraging start has been made, and our appeal is addressed to the Fancy for additions to the fund. Each giving a little would enable a cup to be secured worthy of the great national event in the Scotch Fancy Canary arena. The Association commends itself in many ways to owners of the "king of cage birds," the subscription is moderate, and the advantages numerous. All devotees of the Scotch Fancy are welcome, and any overlooked in the distribution of the membership tickets will oblige by communicating with the secretary. R. Wright, President; Councillor Hogg, Vice-President.—THOS. SMITH, Secretary, 446, Victoria Road, Glasgow.

S.Y.C.C. COMPETITIONS.

Trophy Competition. Champion Section Sandiford's Challenge Cup, most points on his Feed: winner, F. Easterling, 81 points. Special 21s., by Messrs. Coffin Bros., most entries by champion member: winner, F. Easterling, 50 entries at the six shows. 1st, F. Easterling, 81 points; 2nd, R. L. Crisp, 75; 3rd, A. E. Patrick, 57; 4th, W. J. Webb, 38; 5th, W. Gladwin, 35; 6th, Fellows and Flynn, 22. Special 21s., by Mr. W. G. Elsmore, for most entries by country member: winner, W. J. Webb, Westcliffe-on-Sea, 31 entries. First Year Novice Competition: 1st, R. H. Roberts, 39 points; 2nd, G. Thomson, 34; 3rd, G. J. Warley, 24; 4th, F. Smith and T. W. Adams tie for fourth place with 23 points. The following members having won three firsts at three separate shows, will be presented with a teapot, value 21s., and will henceforth show in the Champion Section of the club:—T. Burton, J. Best, L Daintry, J. Hawes, H. T. Jones, H. Smith. All members joining the S.Y.C.C. now, their subscription will carry them up to March 25th, 1908. All members not paying subscription for year now ending (1906), their names will not appear in the book of rules for next year. This will be the final notice.—R. P. BROOME, Hon. Sec.

HALIFAX O.S.

Presentation to Mr. J. F. Thackray.

The Society held their Third Annual Tea and Social at the West Ward Liberal Club on February 23rd, which proved a great success. Tea was served to over 100 members and friends. In the unavoidable absence of the President (Mr. Ross), the chair was taken by Mr. Greenwood. The chief event of the evening was the presentation of a gold chain, subscribed for by members, to the esteemed Secretary, Mr. J. F. Thackray, who has served the Society so well for the past five years. After a few complimentary remarks, the chairman called on the oldest member (Mr. R. W. Sutcliffe) to make the presentation. The latter referred to the rapid progress the Society had made during Mr. Thackray's term of office, and Messrs. Sweeting and Walsh also spoke highly of the courtesy and abilities of their Secretary. Mr. Thackray feelingly thanked the members for their kind appreciation of his services. Afterwards a very pleasant sociable evening was spent. Messrs. J. Sweeting and Hartley played for dancing, and Messrs. W. S. Sweeting, Benton, and Dunn officiated as M.C.'s. Songs were contributed by Mrs. Whitaker, Mr. Crabtree, and Mr. Thomas. Every item on the programme was well received, and encores were numerous.—H. WHITAKER, Assistant-Secretary.

NOTTINGHAM & NOTTS O.S.

The members of the above Society turned up in good numbers at the Cobden Hall, Nottingham, on the 18th inst. to witness a Novice Washing Competition, organised for those who had not before the 4th inst. washed a bird. On the last named date, Messrs. T. Barker and James Bertie gave an exhibition of washing, so that novices had fourteen days in which to prepare themselves for the competition. That they had made very good use of the time was evident by the masterly manner in which they went about the business. The methods employed by the competitors conveyed the impression to many present that they had come "to do or die." Fortunately however, competitors and birds all survived the ordeal, three of the former securing prizes, provided by Messrs. Rhodes, Ley and Chick, and the latter all looking very much better for their "spring cleaning." After the competition, Messrs. T. Barker and James Bertie, who acted as judges (both clever and experienced washers), in a very kindly and acceptable manner, pointed out the good and bad points exhibited by the competitors, and then proceeded each to wash a bird. The distribution of prizes won, and a vote of thanks to the judges, which was duly acknowledged, brought a most enjoyable evening to a close. The awards were as follows:—1, J. C. Caunt; 2, William Cottingham; 3, J. W. Kerry; 4, J. W. Rowson; 5, Alec. Onion, Junr.

NORTHERN CREST CLUB.

Annual general meeting held in Newcastle on February 20th. The following were present:—Messrs. Lister, Inglish, Dobson, Mole, W. F. Swan, Riseborough, Farrar, Walker, Hands, Currah, Almond, Stanger, Brown, Dixon, Graham, Crawhall, W. J. Taylor, Hutchinson, and Robson. Mr. T. Daglish, Blaydon, took the chair in the absence of Mr. Robert Swan. The Hon. Secretary read his report, which included the following interesting items. The membership in 1906 was 46, and is now 45, owing to the death of our esteemed member, Mr. F. J. Kuaggs. The actual income was £11 17s., and expenditure £14 3s. 1½d., which was £2 6s. 1½d. more than the income. This was caused by purchasing another cup, and giving prize money as well as medals in the young classes. The Annual Show was a great success. Our members entered 49 birds in the two young classes alone at Gatesbead. The following new members were elected:—Mr. and Mrs. Pearce (Newburn), W. J. Taylor (Newcastle), Tom Brown (Newburn), J. G. Hutchinson (Heaton). Officers for 1907 were elected as follows:—President, T. E. Davidson (Sunderland); Chairman, R. Swan (Sunderland); Vice-Presidents, Messrs. R. Swan, A. Brown, and A. Lister; Committee, Messrs. W. F. Swan, Farrar, Riseborough, Currah, Almond, Dobson, Dixon, and Stanger; Hon. Secretary and Treasurer, T. Robson (Newcastle); Auditors, Messrs. A. Brown and T. C. Crawhall. Annual Show to be held in 1907, in conjunction with the Sunderland C.B.A. After arguments for and against, it was decided that we remain affiliated to the Cage Bird Union. The Hon. Secretary was appointed to represent the club. The following judges were added to our list:—Geo. Gardner (London), W. Cairns (Edinburgh), and Mr. McLay (Kirkintilloch). It was decided to guarantee a yellow crested-bred class at the Annual Show, also to award a silver medal, or its value, at each of the following shows:—Newcastle, Gateshead, Shields, Blaydon, and Wallsend for the best (1907-bred) Crest and Crested-bred, shown by a member, no single bird to win more than one of these medals; but one exhibitor can win two at one show with a Crest and Crest-bred respectively. Medals, or their value, will also be given for the best bird, any age, at all shows within a fifty mile radius, where six classes are provided for one variety. At the Annual Show the two £5 5s. cups will be competed for, also four gold and eight silver medals in the two (1907-bred) classes, with extra prize money as last year: 1st 5s., 2nd 4s., 3rd 3s., 4th 2s., 5th 1s., in each class, also a silver medal in each of the other classes for the best bird shown by a member. Last day for paying subscriptions, March 31st.—THOS. ROBSON, Hon. Secretary, 41, Shield Street, Newcastle-on-Tyne.

THE C.C.C. AND THE C.B.U.

SIR,—Taking a keen interest in the Crested Canary and the Crested Canary Club, I cannot allow to pass the result of the voting on the question of the affiliation with the Cage Bird Union at the annual meeting of the club, held at the Crystal Palace on February 16th, without making a strong protest against that resolution being carried into effect. I have nothing whatever to say against the objects of the C.B.U., nor do I take it that any right-minded man has. There is probably a need for such a body; but such must and should be representatively constructed. Until April 21st last, may I ask who conducted affairs in the Cage Bird world—if it was not the specialist clubs? And have they so badly managed affairs that a newly-formed body is needed to put them right? Had a conference been held by delegates from every specialist club, and a committee formed consisting of representatives from the governing body of each specialist club, then I should have considered such a representative body, with some hope that the difference of opinion on technical points might have been adjusted, and with some amount of success. Instead of this they have been completely ignored. At the present time the C.C.C. is both numerically and financially a decided success, due to its energetic and hard-working secretary, Mr. J. Tyson, who has shown a superior business ability in dealing with matters connected with the club that few would care to challenge. And now, at a thinly-attended meeting, in about ten minutes, and with only a majority of two, the birthright of the C.C.C. is to be given away! What a reward for Mr. Tyson, after the years of successful hard work that he has put in! What an inducement for another to take up the end of a snapped thread with the probability of the same fate in store. Members of the C.C.C., I ask, are you going to allow this resolution to stand?—for, I say it fearlessly, that once the tentacles of the C.B.U. are fastened round you your freedom is gone. Those in favour of affiliation argue that it will strengthen the hands of the C.B.U., that its objects are the same, and, further, if it is found unworkable the C.C.C. can withdraw. Dealing with these points in the order named, I should imagine, from the number of societies that have already affiliated, the Union would be strong enough for anything it cared to undertake. It would be interesting reading if the secretary of every society affiliated would give their reasons for doing so. I must say that those I have heard given savour very much of fear. Whether its objects are the same may or may not be. Why in the name of all that's just and fair should a club give itself up without discussing this point? Without this understanding or agreement the C.C.C. comes under the rules of the governing body, and itself becomes a nonentity. How can it then withdraw, being non-existing? It is much easier to jump in the mud than it is to get out. I repeat, that if the affiliation of the C.C.C. with the C.B.U. takes effect, the C.C.C. from that time ceases to exist; the fact that both the president and the secretary intend to resign points in this direction. This letter is written without prejudice; I am not concerned with the C.B.U. other than the affiliation of the C.C.C. with it. If other members think with me will they send their names to the Secretary, Mr. J. Tyson, 169, Sloane Street, London, S.W., asking him to call a special general meeting to rescind this resolution? One-fourth of the members are required to do this. I would also appeal to those who voted in favour to allow this to take effect, after which the pros and cons might be satisfactorily argued out. I would like to take this opportunity of thanking those members who have voted me on the committee for several years past. My interest in the bird and the club is purely for the love of the thing. For this year I remain a member, but have resigned my position on the committee until this resolution is rescinded, for I will not be a party for lightly giving away what Mr. Tyson has so hardly earned for us.—W. E. GREEVES.

SIR,—I was at the badly-attended meeting at the Crystal Palace, and do not think it ought to count as a meeting at all, as only 18 members voted on the question of joining the Cage Bird Union, and quite another 18 there did not vote at all. I am of the same opinion as Mr. Tyson, that all specialist clubs are outside the pale of the C.B.U. I think it will be a great shame to see such members of the C.C.C. as the four that resigned at the meeting, leave the club, and I think there will be more to follow. Now, fellow members, are we going to let 10 votes spoil one of our finest specialist clubs, which I think our officers are quite capable of managing? I shall appeal to all the members to write to Mr. Tyson convening an extraordinary general meeting, and hope that all members of the C.C.C. that wish the club to stand, as it has stood for a number of years, as a specialist club, will write Mr. Tyson at once. I think about 40 members' signatures will be required to convene the meeting. Write to-day, and let the whole of the members have a word in this particular question. —H. MILLS.

THE KEYSTONE OF THE C.B.U.

SIR,—There has been some astonishing correspondence under the heading of the Cage Bird Union that was anything but creditable to the writers. It seemed to me to be so full of spite or jealousy, but having little bearing on the Union. Why is there so much opposition to what has been the most successful attempt to form a society that could look after the interests of the whole Cage Bird Fancy? Fourteen years ago there was a Cage Bird Club in existence composed of influential and well-meaning fanciers, with E. A. Derbyshire as hon. sec. In 1900 there was another with J. S. Clarke as hon. sec. Why have these two clubs dropped out of existence? Simply because they died of starvation, not having that hold upon the Fancy that the present Union has got in a few months. They had both the same field of operation before them, with hardworking secretaries to carry on the work. In 1901 Mr. Clarke writes to the press deploring the fact that the club had "not received the support that it ought to have done," and makes a strong appeal to "Let the entire Cage Bird Fancy of the United Kingdom take up the question of establishing the Cage Bird Club in powerful and effective condition." Now, as soon as a body appears with power, he, with others, derides it and denounces that very article in its constitution that gives it the power—Rule 17, the keystone of the entire fabric. Also, "Whether the centre is in London or elsewhere matters but little, so long as the club enjoys the confidence of fanciers, and does the work it was intended to." Here, again, we have an exhibition. Ye men of the North you are thieves, you have "stolen the ideas of the L.C.B.A." Fellow fanciers, has the Union had an opportunity to gain your confidence or to do the work it has before it? Can you get railway concessions such as reduced rates, or free passage for your birds when accompanying them, or a reasonable price for killed or lost stock, without money? No, and you all know it and grumble about it; and yet you will kick the men who put it within reasonable reach of accomplishment. The impotency of the other two clubs arose through their lack of funds, a state of affairs that the present Union has guarded against; and because the fund was kept intact and the rules paid for by a few who benefit by the existence of the Fancy, the officials of the Union (with Mr. Ramsden and Mr. Lythgoe in particular) are held up to ridicule. Can you not see it was in your interest that the rules were printed by advertisement, and that all the fire is on account of CAGE BIRDS having such a prominent display; and can any one of you deny the fact that it deserves far more than any single fancier can accord it for coming to your help when it was greatly needed, and for catering to your wants and tastes as was never attempted or thought of by those in the position to have done so a few years ago? I see Gateshead has followed the bad example of one of the Southern clubs. That, too, is the result of the distant explosion. There are some of the finest men in the North of England in that society, but they have been misled. Come all you fanciers who want quality, you exhibitors who want justice, and you ministers who want a high moral standard pervading the cage bird world, and restore Rule 17.—G. W. MACPARTLING.

THE
BIRD WORLD MAGAZINE
FOR MARCH
NOW READY.

SUPPOSED SUBSTITUTION AT THE PALACE.

A Remarkable Allegation.

SIR,—May I ask that you will kindly give publicity to the following:—I bought a pair of Norwich Plainheads at the late Crystal Palace Exhibition, No. 1,167, Class 88; but between the time I saw them on Saturday night at 10 p.m., and when I received them on Wednesday morning, they had been stolen and a pair of duffers substituted. They have, in my opinion, been taken by someone familiar with the internal arrangements of the show, as the following, I think, will prove. I first selected pair No. 1,168 at 30s., which were a pair of clear birds, and as I had insufficient money with me to make the purchase outright I paid a deposit on them; but, looking over the birds again, I thought pair 1,167, which was a clear yellow cock and a variegated buff hen, the better pair and well worth the other 5s. asked; and so, on sending the cheque for the balance, I stated it was the balance due on my purchase of pair 1,167, and got the receipt for 1,167, and so I formed the opinion that someone who was aware of how the birds were purchased, and thinking that I was under the impression that it was a clear pair of birds I had bought took advantage of that fact to make the exchange. I offer the sum of £1 reward to anyone who will give information that will lead to the conviction of the guilty party.—W. ADCOCK, 4, Aldergate, Tamworth.

CRYSTAL PALACE SHOW.

SIR,—Kindly permit me to say that the Crystal Palace Company were solely responsible for the heating of the above show. That they carried out their agreement and promise in the most admirable manner was obvious to all visitors to the show. The L. and P.O.S. and myself were, perhaps, over-anxious on this point, and made independent arrangements for heating, as mentioned in your report, but these were not put in force, owing to the splendid arrangements made by Mr. J. H. Couens, the manager of the Crystal Palace, and his able engineers, Messrs. Carr and Wright. To these gentlemen are due the thanks of the exhibitors, and—J. W. RAMSDEN.

A CONUNDRUM OF THE CRYSTAL PALACE SHOW.

SIR,—Someone who signs himself "Querist," is anxious to know when is a British bird not a British bird? I presume he thinks a British bird ceases to be a British bird when it is colour fed. Why that should be I leave for a more able pen than mine to answer, but I feel quite sure the Redpoll in the money at the late Palace Show has never tasted colour feed. I know the owner, Mr. Osborn, well; this is his first season as an exhibitor, and I am pleased to say he has had some success. His Redpoll has been in the money several times this season, in competition with larger seed-eating birds, and has never been behind another Redpoll. Perhaps "Querist" is one of the gentlemen whom my young friend has had tempting offers from previous to the Palace Show; at any rate, let him take his beating like a man, and if he does not expect to compete with Redpolls and Twites, why enter when the schedule says "Lesser Redpoll or Twite"?—F. HOWES.

SIR,—In CAGE BIRDS' last issue I came across a letter headed as above. In answer to "Querist," on the comparative merits of a typical Redpoll right out of the cards, and the Redpoll in the money: I think "Querist" is trying to make believe that my Redpoll in the money is nothing in comparison with his ideal one, which stood cardless. I will leave it to my fellow readers to judge for themselves. This same bird has won this season prizes under the following prominent judges: Messrs. Payne, Houlton, Roe, Russell, and Cook, and has never yet been beaten by a Redpoll. Then "Querist" runs away with the idea that my bird is colour fed, as he says it is chock full of artificial colour. Now this I positively deny; my Redpoll has never had any colour food whatever. Then, again, he claims he should have been in front of the second just because his bird is a field-moulted specimen. I contend that more credit is due to a good house-moulted bird. It would be a very difficult task for a judge to please everyone.—G. OSBORNE.

BRITISH BIRDS AT THE PALACE.

SIR,—These lines, I would like it distinctly understood, are not the wail of a disappointed exhibitor, but for the good of the Fancy at large. A special prize is given for the rarest British bird, and it is awarded to a German Nutcracker, and I am open to lay great odds that the gentleman who owns this bird cannot prove him to be a bird bred in these Islands. Of course, I am not blaming him, but the one who awarded the prize; I consider that it was entirely wrongly placed, and, further, it was one talk at the Palace on Saturday, this striking award. Then, again, the Cup, etc., was given to a Treecreeper, a really good one, I admit; but I have beaten him with mine under the self same judge this season. This time mine is passed, but why I don't know, and the Cup is handed to our good friend, Mr. Mays, whom I have always found a gentleman and a good fancier. But why a Treecreeper, which is fairly easy to keep and very easy to steady, when my Great Shrike is put down in absolutely the best form possible? The latter is far harder to rear, and a thousand times harder to steady than the Treecreeper. I must say that I heard this award criticised again and again on the Saturday I visited the Show. Probably our good friend the judge will say he doesn't like Shrikes; this has got nothing to do with it. Is it encouragement, Mr. Editor, to rear the rarer species of British birds? I say no, it is not; and I should be glad to see some other fanciers' opinions on the subject. —S. W. BIRCHLEY.

HAVE CANARIES NATURALLY SQUARE FEATHERS?

The Green Canary Controversy.

SIR,—Having been a breeder and exhibitor of the Green Canary for the past ten years, I may, perhaps, be permitted to give fanciers my opinion of the so-called clipped feathers at the recent Crystal Palace Show, which some of our qualified judges have condemned. I have gone through my stock to-day, and have found several feathers like those found on the disqualified birds, illustrated in last week's CAGE BIRDS. To further convince myself, I later paid a visit to a novice breeder of Greens, and found similar "clipped" feathers in both his Greens and Variegated Norwich birds. I enclose feathers taken from the above mentioned birds, which I hope you will photograph and publish in your valuable paper. Those interested in this square-feather controversy will be able to pass their own opinions on the matter. My confirmed opinion is that these feathers are a natural growth, and more pronounced in one Green than the Clear Canary. I might say that I have known Mr. Clayton for a number of years, and have always found him to be an honest fancier, and one who would not, in my opinion, stoop to such a dishonourable practice as faking birds for exhibition.—R. E. HELLIWELL, member G.C.A.

[A reproduction of the feather's sent by Mr. Helliwell will appear next week.—ED.]

Natural or Faked?

SIR,—The above has come to the front with a vengeance, and Lancashire Lad will be pleased that another "Strong Judge" has arisen who will exercise his own will and judgment. How judges, who admit they have never bred Greens, can put their "will and judgment" against the experience of the majority of the members of the G.C.A. I cannot understand. I admitted that when I first saw the square feathers I thought they had been trimmed, but I was open to conviction, and when I found my own birds with square feathers, I must believe my own eyes, and say that square feathers are a natural growth. I wonder if Mr. Clayton, of Halifax, knew before the Palace show what a square feather was. We know that before the Liverpool Show Mr. Deacon did not know what a square feather was. The opinions given on page 167, February 23rd, should convince anyone who is open to conviction, but the strange part of the affair is that all this was gone through years ago, before CAGE BIRDS was hatched, and fanciers were not so ready to stand up for the truth in the Fancy press. Now it is suggested "pluck the square feathers, and see if the new feathers grow square"; to my mind that will not prove whether those plucked out were cut or natural, for if they are caused by bad moult, the new feathers may not be square. The plucked feathers should be kept; remember they were the feathers the birds were disqualified for, not any that may grow after, square or otherwise. In this matter the experience should count, and this should be settled by those who breed Greens. Mr. Clayton's experience proves that they do not all come from the Liverpool district.—H. BARRATT.

Why they were Disqualified.

SIR,—Yes; certainly Canaries have square feathers. The birds disqualified at the Palace Show have plenty of them. They were not disqualified for having these natural square-ended feathers, but for having a few square feathers that the judge alleges are not natural.—J. W. RAMSDEN (show manager).

"A Common Thing."

SIR,—The first bird I had with square feathers, the web looked as it was cut, and was all jagged on the web, and square across when it came back from the show. A friend of mine pulled them out for me, and seven weeks after it was shown again, under the same judge, and he gave it third. It was never trimmed for the first show as it was a natural defect. The bird I have at present with square feathers is not a show bird. I have pulled some out at the back of the neck, but there are a few left in that are square at present. The feathers are a natural defect, and this bird was not trimmed for show purpose, and it is a common thing to find square feathers in Green birds.—JOHN DIXON (Edge Hill).

MORE NEW SOCIETIES!

SUGGESTED SOCIETY FOR WEST BROMWICH.

SIR,—Kindly allow me a small space in CAGE BIRDS with regard to a Cage Bird Society for West Bromwich and district. I know there are scores of fanciers in the town by the great call for CAGE BIRDS every week. I hope this will catch the eye of some of them, and bring them together to see if a start can be made. Hoping someone with an abler pen than mine will take up the matter. —A LEWIS.

ORMSKIRK AND DIS. C.B.S.

SIR,—A large and interesting gathering of fanciers was held at the "Roper's Arms," on February 25th, to take into consideration the formation of a Cage Bird Society for the district. It was unanimously decided that a society be formed with the above title. Officials were elected, and a strong working committee formed. Fourteen members were enrolled, which promises well for the future. The committee decided to meet at the "Horse Shoe" on March 4th, to prepare rules, etc.—T. H. TIFFEN, Hon. Sec.

SALE OPEN O.S.

SIR,—A meeting was held in the Sale Hotel, Sale, Cheshire, on Feb. 25th, when the above society was formed. It was decided to hold the meetings on the second and fourth Mondays in each month, at 8 p.m., when all fanciers will be made welcome. Subscription, 5s. per annum. A sub-committee, consisting of Messrs. G. F. Hardcastle, J. Fletcher, T. Ellingham, and C. Smith was appointed to draw up rules for next meeting. Mr. Hardcastle was elected Secretary, and Mr. Jas. Fletcher Treasurer. It was unanimously decided to make the Sale Hotel the headquarters. Twenty-two gentlemen gave in their names for membership.—G. F. HARDCASTLE, Sec.

SOCIETY FORMED AT ENNISKILLEN.

SIR,—A meeting was held at East Bridge Street, Enniskillen, on February 14th, to form a Fanciers' Society for the district. It was decided to call it the Enniskillen and District Cage Bird Society. Rules have been drawn up by the committee, to be placed before the general meeting which will be held at the committee room of the Town Hall on March 14th at 8 p.m. All fanciers desirous of joining please communicate with J. McQuade, Hon. Sec., 1, Alma Terrace, Enniskillen, who will supply full particulars. The society hopes to hear from a large number of fanciers, as at present we are a small body, all working men, and the whole thing rests of the shoulders of one or two fanciers. The first annual show is fixed for November 1st, 1907.—YOUNG FANCIER.

BEAUTY, CONDITION, OR RARITY, WHICH?

SIR,—Your correspondent, Mr. Ward, has opened a most useful debate, that is, if, after hearing the various decisions on the matter, any good comes of it, as my experience is that a lot of these "confabs" end in smoke. As far as colour feeding is concerned, I don't think this will ever be stopped, as it is now looked on as a necessary evil. But our friend has omitted what I consider our greatest trouble, and that is, the judges themselves of British birds. I openly admit some of our judges are a lot better than others, but there are great mistakes made at our shows to-day, through the judge not knowing the points of the birds he has before him, to say little or nothing of the hardships in the taming and conditioning of these birds, which I consider is everything. As an example, at one show held quite recently the judge took not only the cage birds, but nearly the lot (a mixed show), and what was the result? Why, the Britishers were simply scanned over, and most glaring mistakes were made. Take the Palace Show, again, look at the judging in some of the classes. I would ask Mr. Cook (the owner) if he could prove his Nutcrackers to be an English-caught bird, or even a British ditto. Of course, at the same time, I am not for one moment blaming this gentleman, but as a fancier and a sportsman, I feel sure he will oblige me. My contention is that it was a German bird, and can any of your 40,000 readers ever recollect one being caught in these islands? One gentleman, who will doubtless read this letter, said it was a disgrace to the Fancy to award a German bird the special for the Rarest British Bird, and my contention is the same. (I would like here to add, my Shrike is a Britisher, and I have seen three that have been caught in these islands lately.—S. W. BIRCHLEY.

[Certain other suggestions originally contained in this letter we would commend to our correspondent as being better to make direct to those who have the arranging of the Palace Show, rather than to voice in print.—EDITOR.]

NOW READY!

AN ENTIRELY NEW SERIES OF

COLOURED POSTCARDS OF HYBRIDS.

On this Series the following are . . . . beautifully portrayed by Mr. H. Norman :—

(1) Jonque Four-pointed Goldfinch-Canary.
(2) Goldfinch-Bullfinch.
(3) Goldfinch-Redpoll.
(4) Greenfinch-Bullfinch.
(5) Linnet-Bullfinch.

PARROT FOOD

Mr. F. H. JUDGE writes:

4, Fryent Cottages, Kingsbury. London, N.W., July, 1906.

I thought you would feel interested to hear of the success I have achieved by using your excellent Parrot Food. I exhibited for the first time at Great Missenden, on July 12th, my green Amazon parrot, in an amalgamated class of English and Foreign birds, and was successful in carrying off first prize. Her excellent plumage was much commented upon, and I attribute this to having always fed her on your food, which sustains her through her moults and keeps her in good health.

SOLD IN PACKETS AND TINS.

Booklet on "Parrot Keeping and Feeding," post free for three penny stamps.

THE CAGE BIRD UNION.

SIR,—I am pleased to see the discussion now going on in your columns re Cage Bird Union, but regret the tone adopted by one of your correspondents. I need not mention the name as I feel sure your readers will have no difficulty in selecting the party meant. Discussions carried out in a gentlemanly and reasonable manner are productive of much good, and of the greatest benefit to fanciers in general. In reply to one of your correspondent's opening questions as to "Who is this tub-thumping William Reid?" my impression is, judging by the tone of his correspondence, that he is a gentleman in no way averse to discussing his opinions in a proper manner, opinions, may I suggest, shared by a great many. I don't think the C.B.U. will thank James Reid for comparing it to a sickly child. Perhaps J. R. thinks the comparison appropriate, but would it not be more politic to keep that to oneself? Does he suggest that because 150 societies have associated themselves with the C.B.U. that fair discussion should be suppressed? I suggest, had these 150 societies known as much before joining as they do now the greater majority of them would have held aloof. Many of them were coerced into joining by false impressions; and let me tell J.R. there are working men who don't believe in Trades Unionism and don't lie low as he puts it; and if this has to be taken as another comparison, there are working men (and hundreds of them) who don't believe in the C.B.U., and who will give the Fancy up altogether before they will submit to many of the rulings of that self-raised body. Now for Mr. Lythgoe's contention that shows held under the C.B.U. rules have been better supported. From my observation in this district I have no hesitation in contradicting that statement, and have no doubt show secretaries can support me. I think the C.B.U. has taken too much upon its shoulders. How many of the good things that were promised have been attempted, far less realised? Of one thing they can be certain; far from being the success they claim, they have caused a great amount of uncertainty and dissatisfaction amongst societies and fanciers alike, and I would like to see all fanciers and secretaries of societies step in and give their opinions upon this question. Review the past year's working of this self-constituted body. Look at the number of genuine and good men who are leaving their societies on account of the C.B.U. I think J.R.'s "sickly child" is going through a serious surgical operation, and is losing many of its members.—JOHN FERGUSON.

SIR,—Your correspondent, James Reid, must have been very badly hit by my reply to his first letter, at least he has not modified his language, rather the reverse, for, finding that the names he used in abusing me in his first letter took no effect, he has reverted to the cowardly methods usually adopted by such people as himself when they get the worst of an argument. I refer to the expression "blackleg namesake" used by him in his last letter. What a mean, despicable sort of fellow he must be, to use such an expression to a man he does not even know, and probably never even heard of until this correspondence appeared! And this is the man who poses as a "fair man," and is continually crying out "Give it a chance!" "Give it a chance!" James Reid also alleges in his letter that "some working men don't believe in trade unionism." I will answer this paragraph and the expression referred to above at the same time, and for the benefit of any of your readers who may have been misled by the cowardly expression used by James Reid, I may as well say at once that I happen to have twelve years' continuous membership of the Amalgamated Society of Engineers—that is, from the time I was twenty years of age until the present time; in other words, a highest possible: first year, a non-free member joining as an apprentice, and the last eleven years a full member entitled to all benefits. "No need for James Reid's expression, Mr. Editor, eh?" Now, James Reid, with all your big talk about trade unions, can you beat this, years of membership according to age, or are you really what you are trying to prove yourself to be, a loud-mouthed windbag, a mere mouthpiece for someone else? Apply your own words to yourself, "Be a man," and withdraw your expression; it will do more to raise you in the opinion of fanciers than anything else you can say, and for the future make sure of your man before you begin abusing him, for your own sake. Surely a body of men forming a Cage Bird Society are capable of managing their own affairs without employing others to do it for them. Now, James Reid, don't bounce so much about the fact that 150 societies have affiliated to the Union. How many of these societies joined in the same manner as the Crested Canary Club? How many societies voted on the question simply by a show of hands, with only a small percentage of their members present? You cannot prove that this Union is the popular Union that you would make it appear to be. On the contrary, there is every indication that it is unpopular. Referring to my "ravings," as James Reid puts it, the fact that the two principal causes of my "ravings" have been removed, should prove that I was not alone in my "ravings," and that they were not unreasonable. I refer to my desire to "allow a man to be present when he is being tried for any offence," and the objectionable part of Rule 17. James Reid talks loudly about giving the C.B.U. a chance. If *he* was *convinced* that the C.B.U. was detrimental to the best interests of the Fancy would he give it a chance? Judging him by the tone of his two letters I think that most of your readers would say that he would be one of the first to "howl" it down. The question re the sickly child I will answer by asking another. Is it not a fact, James Reid, that a healthy child can be made into a sickly one by improper food and impure air; in other words, bad management? And is it not a fact that the Cage Bird Fancy is in a better condition at the present time than it has ever been? If so, what need is there for this Union when the Fancy is thriving so well? What causes this Union to come forth at a time when things are going on so well? Is it because there is something to be made out of it, or is it pure unselfishness, pure unadulterated love of the Fancy, that causes this Union to take the Cage Bird Fancy under its wing, "or thumb"? Which is it, James Reid? We often hear the remark expressed that the working man is the backbone of the Fancy. Then, why is it that when a working man should happen to object to anything that, in his opinion, is not right, another working man should be so ready to abuse him because he does not happen to hold the same opinion? Surely he can criticise him without abusing him. One is almost inclined to think that the Fancy would have been better off, if (to use another of James Reid's expression) such men *had* been "strangled in their infancy." Now, sir, I am sorry to have to write in this strain. I did my best to avoid personalities, but there is a limit to all things, and you will admit that your correspondent, James Reid, has been "asking for it." The only result of this sort of correspondence is to have it rejected, and this is, no doubt, the reason why James Reid persists in it, his idea being to have all adverse criticism of the C.B.U. stopped as soon as possible. "Very fair, sir, isn't he"? Now, James Reid, keep to the point, and, as I said in my last letter you shall have every attention. You can be accommodated with pleasure on any question concerning either trade unions or the Cage Bird Union by —WM. REID (Sunderland).

[A large portion of the above letter dealing with trade unionism and the Masters' Federation (which are not fit subjects for discussion in this paper) had to be deleted. ED. "C.B."]

BELATED AND SHORT PRIZE MONEY AT BONTNEWYDD SHOW.

SIR,—With regard to the letter on the above subject, which appeared in your issue of February 23rd, I consider that I should be doing the Fancy an act of injustice were I to let it pass without relating my experiences in connection with this show. Although the prize-money was only 5s., 3s., and 2s., I was tempted to enter three Yorkshires in the one class, my aim being to try and win the cup for the best exhibit in the Cage Bird Section. The birds were taken to the show by a friend, and you can imagine my delight when I met him at the railway station on his return, to learn that I had taken first and special (silver medal), second and vhc. awards, also winning the cup. I read with great admiration, the account in CAGE BIRDS the following Friday, which gave a splendid report, and the comments on the Yorkshires were unsurpassable, and set me eagerly waiting for my winnings. Weeks passed, and I was still waiting for them. I wrote to the Secretary, but failed to get a reply, notwithstanding that I enclosed stamp for reply. It was not until I threatened legal proceedings that he wrote me a postcard informing me that the show was a financial failure, and referring me to one of the gentlemen on the committee for the special prize. I received 2s. 11d. (instead of 7s. which I was entitled to) on February 18th, 1907. The show was held on September 22nd, 1906. I am now given to understand that the person who is presenting the silver cup is a sailor, and at present at sea. So I shall have to wait until the "ship comes home" ere I can proudly gaze upon my long-looked-for trophy. I hope this will catch the eye of those fanciers who are not in favour of the C.B.U.—R. N. WILLIAMS (Chester).

THE BORDER FANCIES.

They charm our eyes, they cheer our heart,
Make high and low good friends indeed;
Unite us with some magic art
From London Town to vale of Tweed.

OBITUARY.

J. WOODHOUSE (Portsmouth).

Mr. Arthur T. Jupe writes:—It is with regret that I have to write and tell you of the death of our worthy Hon. Sec., Mr. J. Woodhouse. He has been the backbone of the Portsmouth Fanciers' Society for a great number of years. It is a great blow to us all, and a loss which we shall never replace.

CRYSTAL PALACE SHOW.

Address of Buyer Wanted.

SIR,—If this meets the eye of Miss Barraud, who purchased Exhibit No. 1,955, I shall be much obliged if she will kindly send me her address.—J. W. RAMSDEN, Show Manager.

A CAGE-WIRE STRAIGHTENER WANTED.

SIR,—I ask some kind reader how to make a cage-wire straightener. I have tried all different ways to make cage wire straight, but fail to do it. Could someone help me, or can I buy such a thing? Thanks for information which I have received before out of CAGE BIRDS.—WALTER WILLIAMS.

LLANELLY SHOW AND THE C.B.U.

SIR,—I have learned from your last issue that my name and the Llanelly Poultry, Pigeon, and Cage Bird Society were brought forward at the meeting of the Cage Bird Union, held at the Palace Show, and that there was a recommendation from the Wales district to suspend the Llanelly Society, or rather to prevent them having a licence for two years from the C.B.U. The reason of same is that I have been accused of writing letters to exhibitors stating that our late show was held under C.B.U. rules; also that I wrote on the back of one schedule, in answering some exhibitor, "Yes; we belong to the C.B.U.," which was mentioned by a delegate from Wales. I hope he will keep it as a memento of the visit. I consider it a trumped-up case by a few who bear malice towards our old-established show, with an intention of doing them out of the Cage Bird Section, as there is a new C.B.S. sprung up in the same town. It distinctly shows I am accused of obtaining entries under false pretence. Allow me respectfully to inform the delegate and his co-workers that I have been in office too long to commence to do such dirty actions as to mislead exhibitors for the sake of a paltry entry. I am prepared to send you, Sir, £5 for any charitable institution, if any reader of CAGE BIRDS can furnish you with a letter or schedule sent from me, stating that our show was held under C.B.U. rules. Now it stands to reason that it would be better for us to join and pay up the 5s. for a licence than go to the trouble and expense of writing letters; and, further, a secretary with 105 classes to attend to can't afford time to write false statements. I may inform readers that we have never professed, intended, nor advertised in any fanciers' journal or daily paper that our show was under C.B.U. rules; neither was a single word included in our schedule. I express my thanks to Mr. Lythgoe (sec. of the C.B.U.) for asking me for an explanation concerning same, as I was not aware that the false accusation would be brought on at the Palace. However, I find by the result of the meeting that the committee "had not sufficient evidence" to prevent us having a licence if applied for. I consider they have acted wisely, honest, and just, although it matters very little to us regarding the licence, the most important question being the untrue statement made. In future, I hope whoever the delegate may be attending a national gathering, that he will have sufficient proofs before accusing a well-known society of 15 years' standing, as, in the end, "the truth will pervail."—D. GRIFFITHS, hon. sec., Llanelly P.P. and C.B.S.

LINES ON THE L.C.B.A. DINNER.

By One Who Enjoyed It.

Last Monday we went to our Annual so gay,
The yearly "blow-out" of the L.C.B.A.;
We were "Birds of a Feather" who'd oft met before—
I think in round numbers we mustered four score.
We were all "V.H.C.'s," and that's something, you know,
But to grasp matters well, read "C.B." on the Show.
The tables were graced by the feminine gender,
Says Dawson, "We can't do without them, remember!"

Our President's toast we all gucs'd would be crisp;
Mr. Tyson replied, without stumble or lisp.
We heard of our Show, the Lord Mayor's kindly grace,
The predictions of ruin: we hands down won the race!
So a "Tenner" so crisp from the L.C.B.A.,
To swell Treloar's Fund for the cripples we pay.
The new sec. will "wade" through, with his hard-working band,
"Naught succeeds like success,' so let's work hand in hand.

An admirable Food of the
EPPS'S
Finest quality and flavour.
COCOA
Nutritious and Economical.

DOUBLE BUFFING & YELLOWING.

SIR,—Re the discussion by Mr. Brotherton and a Southern fancier in your wonderful two-penn'orth last week—Can Yellows be produced from double Buffs, and Buffs from double Yellows? About the former, I can say nothing, but with regard to the latter I say yes, because I have in my bird room a Buff hen bred from double Yellows, two years ago. This bird was bred from a clear Yellow pink-eyed cock and a heavily-marked Green-Yellow hen (both Yorkshire). How the Yellow cock was bred I cannot say. The Yellow hen was my own breeding, and was produced in the usual way from a green-marked Yellow cock and a clear, dark-eyed Buff hen. Now, I only took one nest from the double Yellows—four birds, all Buffs, and all hens, one clear, which I afterwards lost sight of in the flight, two cinnamon ticks, and one variegated cinnamon marked. The last bird I kept, and paired up last year to a green cap marked Buff, and the results from these have indeed been very peculiar. In the first nest two birds were hatched, one green-marked youngster, and the other nearly a whole green. In the second round, four birds were hatched, one clear, two cinnamon marks, and one nearly a whole cinnamon with the exception of the outside feather in each wing, and two white feathers in the tail, and all these six youngsters are Buffs. Now, when pairing up the double Yellows I quite understood that it was possible to obtain a good Buff from the progeny, but what strikes me as being most strange is the fact that the four birds from the double Yellows were all hens, and that the young (six of them in all) from out of these hens should also turn out to be all hens. I should also like to know, how does it come about that when the double Yellow (Buff) hen is paired to a clear bodied, capmarked Buff cock, the progeny should be green marked, cinnamon marked, and clear Buff. Perhaps some of our older breeders will kindly explain, for I am sure it would make very interesting reading to all those who intend this season to try their hands at either double Yellows or double Buffs. This year I shall pair the hen to a clear Yellow, and also her daughters of last year, two of which I am keeping to mate with Yellows, and will give you my results at the end of the breeding season.—E. J. BANKS.

SIR,—The following appears in your Palace Notes :—"Can Yellows be produced from double Buffs, and Buffs from double Yellows?" I herewith send you my notes of four pairs, and let them speak for themselves; they are taken from my pedigree book. No. 1 Pair.—Yellow ticked cock and clear yellow hen. The cock of this pair was double Yellow bred, and the hen in the usual way. First nest, five eggs, all hatched; one clear yellow, one ticked yellow, one yellow green, one clear buff, and one buff ticked. Second nest, six eggs, four hatched, and two dead in shell; one ticked yellow, one variegated yellow, one ticked buff, one variegated buff. No. 2 Pair :—Yellow green cock and yellow green hen. The cock bred in the usual way, and the hen double yellow bred. These two did not pair readily at first. First nest, four eggs, three hatched, and one dead in shell; one clear yellow, one yellow green, and one buff green. See you make no mistake in these three. Second nest, laid seven eggs, left her with six; five hatched out all right, and one dead in shell; one clear yellow, one variegated yellow, one variegated buff, one yellow green, and one buff green with clean tail. No. 3 Pair :—Clean buff cock and cinnamon-marked buff hen. First nest, five eggs, all hatched; two clear buffs, one buff ticked, one clear yellow, and one yellow ticked. Second nest, four eggs, all hatched; one clear buff, one ticked buff, one variegated buff, and one clear yellow. I do not know how this pair of birds were bred, as I bought them from strange fanciers, and did not inquire about their pedigrees, as they looked suitable for my purpose, but did not turn out as wished. No. 4 Pair :—Nearly even-marked buff cock and even-marked buff hen. The cock bred in the usual way, and hen double yellow bred. First nest, five eggs, all hatched; two variegated buffs, two yellow greens, and one buff green, with foul tail. Second nest, six eggs, all hatched; two suffocated in nest; one buff variegated, one yellow variegated, one yellow green, one buff green, with light tick on back of neck. These four pairs are all Border Fancy Canaries, and were being bred in this way for the purpose of getting stock birds with certain points. I have for the last twenty years been in the habit of breeding double yellow and double buff, and have never seen any injurious effects from it, but the reverse. —WM. MCMILLAN.

HOW TO MAKE LIGHT BUNS.
By using Eiffel Tower Bun F. or the most inexperienced person can make *light* Buns and Cakes with certain success. Try a 1d. packet. Save Eiffel Tower Labels for 10/6 picture free.

O! WHAT A SURPRISE!

SIR,—Seeing the note in CAGE BIRDS regarding breeding, it might surprise your many readers a little to hear that last season I put a pair of unrelated Buffs together, and results were youngsters yellow variegated. A couple of these youngsters were very heavily marked, almost pencilled like a Lizard, and seemed to be extraordinarily big birds. I was very much surprised, for neither of the parents had a mark on them.—ISAAC OLDCORN.

AN EDINBURGH SCOTCH FANCY BREEDER'S PLANS.

SIR,—Being in Fountain Bridge, Edinburgh, on business, and having half an hour to spare, I dropped in the fire station and asked if Mr. Allan was in. "Up stairs, sir," was the reply. I knew what that meant, the bird room. So up I went, and found my friend busily cage cleaning. After the usual friendly greeting, he hands me the first pair in the City Show, a grand, hard up yellow cock mated to the large buff ticked hen he got from Mr. McLennan as a cock last season. I noticed he intends running the young buff ticked hen he bred himself, first in her class at the City Show, with same cock. Second pair, the old champion last year, yellow hen with a good, heavy buff cock. I was sorry to see the hen looking very dry in feather; am afraid it will be well on in the season before she comes away. Third pair, grand hard up, heavy-backed crossed ticked yellow hen with his young buff cock, second at City Show; this bird greatly improved going through the moult; not the same bird as seen last autumn. I must congratulate my friend on having the best-balanced small stock I ever had the pleasure of looking over, and, with a fair season's breeding, he will be a hard nut to crack on next season's show benches.—RAMBLER.

EARLY BUDGERIGAR BREEDING.

SIR,—I have read with pleasure the success attending some fanciers lately in breeding young mules so early. These mules evidently have been subjected to artificial heat; but I should like to ask if this is not very early for young Budgerigars in a cold outdoor aviary? On paying a visit to Mr. J. C. Barnes (Derby), a few days since, I was surprised to see his hen Budgerigar feeding two young ones about twelve days old. I may say that the place where the husk is hanging in the aviary is very exposed, and the erection contains no heating apparatus.—W. H. BAMSEY.

Austin; vhc, Masters Lovell and Nicholas.

SWINDON AND DIS. C.B.A.

Monthly meeting, February 20th. A large number assembled, and a thoroughly enjoyable and instructive evening was spent. In the unavoidable absence of Mr. Sendell, through illness, Mr. Allsopp was voted to the chair. The first item was a table show of British Hardbills, Mr. Birchley judging. There were three classes, and the quality of the birds was most excellent, especially in the Goldfinch class, which contained birds of very high merit. The following were the awards:—GOLDFINCH OR BULLFINCH (8): 1, 3, 4, vhc, Hopkins and Allsopp, grand team, first a real gem, teeming with quality and finish, excellent blaze, nicely tanned, and very steady, third smaller than winner in head and body, still a very nice Finch; 2, Poole and Ottery, nice Finch, good blaze, bars, and buttons, a little soft in feather; vhc, Dodd. LINNET, ETC. (9): 1, Edmunds, well marked Twite, not one of the largest, but in nice feather, well shown; 2, Dodd, Linnet (a hen we thought), nicely laced on breast, good body colour, and well shown; 3, Leavers, Siskin, good colour and markings, but void of bib, which put him back, otherwise a nice bird; vhc, Pinnel; hc, Hopkins and Allsopp; c, Leavers. A.O.V. HARD. (8): 1, 2, 3, Leavers, Hawfinch leading, in nice form, good bib, nice colour and markings, second Greenie, fine yellow, in A1 form, should be heard of again, third Chaffinch, good size, colour, and markings, showing plenty of white in wings, good condition, and well staged; 4, Brewer; vhc, Poole and Ottery; hc, Hopkins and Allsopp; c, Edmonds. After judging the birds, Mr. Birchley read a paper entitled, "Some observations on Hardbilled British Birds," which was full of interest. A hearty vote of thanks was accorded Mr. Birchley for his services in judging the birds, and for his excellent paper. Mr. Birchley, in responding, said that he was pleased with the reception accorded him, and trusted that the members of the society would pull together, and make the Swindon C.B.A. one of the strongest associations in the West. Five new members were proposed, bringing up the membership to 51.—JAS. T. EDMUNDS.

BAILDON C.B.F.A.

Members' show, held at headquarters, Bull's Head Inn, on Saturday, Feb. 9th. This was the last of the series of members' shows for 1906-7. Over 70 birds were staged, quite a compliment to this young society, whose membership is rapidly increasing. Mr. James Wilson, Sandy-lane, judged. The special, 12/-, for most points was won by Mr. Wm. Fawcett; 8/-, second most points, Mr. Jesse Halliday; 6/-, third most points, Mr. James Tidgwell; 4/-, fourth most points, Mr. J. Greaves. Specials for best and second best bird in show was won by W. Fawcett, who also won special for best vhc bird. Messrs. Hudson and Dawson won special for best fourth bird. CL. YELL. YORKS.: 1, spl, vhc, Fawcett; 2, 3, Greaves; 4, Hudson and Dawson; hc, W. Tyler. BUFF: 1, spl, 3, Fawcett; 2, hc, Rhodes; 4, Tidgwell; vhc, Halliday; c, W. Tyler. TICK. YELL.: 1, spl, 3, Greaves; 2, Atkinson; 4, Fawcett; vhc, Tidgwell; hc, Halliday. TICK. BUFF: 1, spl, Tidgwell; 2, Jennings; 3, Halliday; 4, Fawcett. YELL. HEN: 1, spl, vhc, c, Rhodes; 2, Tidgwell; 3, Fawcett; 4, Holmes. BUFF HEN: 1, spl, Halliday; 2 vhc, Atkinson; 3, 4, Tidgwell; hc, W. Tyler; c, Rhodes. NOVICE CLASS: 1, spl, Atkinson; 2, 4, Hudson and Dawson; 3, Holmes; vhc, Taylor. A.O.V.: 1, spl, Tyler, Green Yorks; 2, W. Tyler, Norwich; 3, vhc, Fawcett, Norwich and Lancashire Plainhead. A.O.V. BRIT.: 1, spl, Rhodes; 2, 4, hc, Tyler; 3, Halliday; vhc, c, Fawcett. SELL. CLASS. 10/6: 1, spl, Laithwaite; 2, Tidgwell; 3, Fawcett; 4, vhc, Tyler. SELL. CLASS HEN, 10/6: 1, spl, Fawcett; 2, Halliday; 3, vhc, Tidgwell; 4, Laithwaite; hc, Jennings.—FRED TYLER, hon. sec.

GATESHEAD & DIS. C.B.S.

Everyone was in the best of spirits at our last meeting, as the result of balance sheet, showing a cash balance of nearly £16, and assets value £5 12s., etc. The committee extended the classification last year, and added ten more classes to the open, including four classes for Belgians, and the result was most gratifying. The entries came up far above our expectations, and a fresh record was established.—T. TAYLOR.

[Some of this report indecipherable, on account of being a defective carbon copy.—Ed. "C.B."]

QUEENSBURY C.B.S.

Members' show, Feb. 25th, at the Granby Hotel, when about 50 birds faced the judge, Mr. J. S. Clarkson (Halifax), whose awards afforded general satisfaction. CL. OR TKD. YELL.: 1, Jagger and Ackroyd; 2, Waterhouse; 3, Tomsett; 4, Myers. BUFF: 1, Myers; 2, Fowle; 3, Pratt; 4, Craven and Son. UNMARKED OR FOUL YELL.: 1, Bramfit; 2, Myers; 3, Craven and Son. BUFF: 1, 4, Craven and Son. YELL. HEN: 1, Smith; 2, Hartley; 3, Wilkinson. BUFF: 1, Bramfit; 2, Craven and Son; 3, Pratt; 4, Myers. UNMARKED OR FOUL: 1, H. Jagger; 2, Myers; 3, Craven and Son. A.O.V.: 1, 2, Smith.—S. JAGGER, Sec.

[Kindly note that unless your reports are sent us clearly and distinctly written out, we cannot undertake to print them in future.—Ed. "C.B."]

WARRINGTON C.B.S.

Members' Show, held at Blue Boar, February 14th, Mr. A. Hirst (Accrington) judged. YORKS. (10): 1, 2, 3, vhc, Knowles; hc, Dukes; c, Birchall. PAIRS (10): 1, 3, Knowles; 2, Badger; vhc, P. Cowell; hc, A. Stout; c, Cowell. NOR. (3): 1, Houghton; 2, Walters; 3, Emmett. PAIRS: 1, E. Smith; 2, Emmett; 3, Smith. A.O.V. CAN.: 1, Johnson; 2, Billington. A.O.V. PAIRS: 1, Knowles; 2, 3, Johnson; vhc, Hampson. PAIRS FOR MULE OR HYB. BREEDING: 1, Walters; 2, Birchall; 3, Hampson. LINNET, SISKIN, REDPOLL OR TWITE: 1, Billington; 2, Hampson; 3, Houghton. A.O.V. BRIT. SEEDEATER: 1, Billington; 2, 3, Hampson; vhc, Huggett; hc, c, Houghton. After judging, Mr. Hirst gave a washing exhibition before a large number of members. After this was finished, a hearty vote of thanks was passed to Mr. Hirst, and several members asked him questions concerning their birds. The following officers were also elected for the ensuing year:—Mr. Knowles, President; Messrs. Huggett and Walters, Vice-Presidents; Mr. Emmett, Secretary; Mr. J. D. Leigh, Treasurer.

QUEEN'S PARK AND DIS. C.B.A.

Annual Show of Pairs, matched for breeding, held headquarters, the Windsor Castle Hotel, Harrow-rd., W., Feb. 14th. Ninety cages staged speaks well for the society's future, especially as several of the prominent members do not send exhibits to pair shows. The Yorkshire sections were well patronised, especially the Novice Class, twenty-three cages facing the judge, the quality being excellent. Some well-matched pairs were there. The Norwich Plainheads also contained some fine specimens, and the Hybrid Classes were nothing lacking, and made a good muster. The birds were well staged by the stewards, Messrs. Daintry, Harris, Hodges, and the chairman, Mr. Lawrence, who were very painstaking, and attended well to the wants of the exhibits. A good attendance crowned a very successful show. Mr. John Robson judged. The successful exhibitors were Messrs. Battison, Lethbridge, Roberts, Buckman, Churchard, Laurence, Giles, Hawes, Rogers, Thornton, Lewis, Menhenett, Holmes, Batchelor, Birch, Maisey, Monger, Wynn, Bassett, Thorpe, Green, Harris, and Hawes.

THANET F.S.

At the Bull's Head Hotel, Margate, the members of this society held their first table show of cage birds, and the venture was a success in every way. There were over 70 entries, and the stock exhibited was certainly of a very high quality, some really splendid birds being shown. The arrangements were admirably carried out by a small committee, consisting of Messrs. S. C. Boncey, T. W. Brown, A. Hoghen, A. G. Moore, S. Marten, and W. J. Jones (hon. secretary). Mr. F. J. Gibbs (Canterbury) did the judging, and also gave a brief lecture on the general routine of breeding and feeding of Norwich Canaries, and also replied to several questions put to him by interested owners. In Class II. Mrs. A. W. Bayly showed a magnificent bird, judged to be the best in the show, but it had to be overlooked because wrongly classed, as it was what is technically known as "ticked." NOR. CL. YELL.: 1, 3, hc, Bayly; 2, Moore; hc, Jones. BUFF: 1, hc, Brown; 2, Moore; 3, hc, Jones; hc, Hills. TICK., ETC.: 1, 2, 3, Jones; 4, Bayly; vhc, Kew; c, Moore. PAIR: 1, Bayly; 2, Moore; 3, Hill; 4, hc, Boncey; vhc, Brown; c, W. J. Jones. BRIT. (not larger than a lark): 1, 4, Kew; 2, 3, Matthews; vhc, c, Bayly. SELL. CAN.: 1, Jones; 2, Moore; 3, 4, vhc, Boncey.

Hearty votes of thanks were accorded to the judge and the committee, and the hope was expressed that similar encouraging shows would be held.

STOKE NEWINGTON PAIR SHOW.

The Annual Pair Show of the Stoke Newington Fanciers' Association was held in the Devonshire-square Church Schoolroom, on February 19th. The entries only came up moderately well, and owing to the unpropitious state of the elements the attendance was far from good. Mr. Dowden and his committee, as usual, had everything very nicely arranged, and the venture passed off well. Mr. C. A. House judged.

YORKS. CHAMPIONS (3): 1, 2, 3, Preston, very nice trio, first cinnamon yellow marked cock and a clear buff hen, a useful looking pair of nice shape and style, second wing marked yellow cock, and variegated cinnamon hen, shapely and nice feather, not so stylish, third two good bodied clears, but fail in style. NOVICES (8): 1, 2, vhc, Penton, the leaders a quality pair of clears, yellow cock and buff hen, good in shape and style, second cinnamon marked yellow cock and a buff hen, very close run indeed; 3, c, Turner, yellow cock and cinnamon marked hen, capital shape and style, not so good in feather; vhc, hc, Wells. NORWICH AMATEUR (4): 1, 2, 3, vhc, Pike, first yellow cock and buff hen of most excellent shape, with nice quality of feather, second buff cock and yellow hen, shapely, but not so good in feather properties, third buff cock and yellow hen, not so well matched, both failing in type. NOVICE (3): 1, 3, Dowden, first green cock and buff hen, third two useful clears, very nice type; 2, Morris, larger, and drop their tails a bit. MULES (6): 1, Pike, very bright coloured well marked Goldfinch, and a grand yellow Norwich hen, a very likely looking pair; 2, 3, vhc, Mortlock, second very shapely, good coloured steady Greenfinch and a fine bold Norwich hen, third a Cheverel Goldfinch, and a good one too, and a long stylish Yorkshire hen; hc, c, Dowden.

SINGING CONTESTS.

OLD BIRD HOUSE, LEEDS.

The quality Linnet singing brigado were treated to some very good singing at the Old Bird House on Saturday. Sixteen selected birds competed for three good prizes given by the landlord, Mr. J. Booth. The birds were in splendid condition, and gave a good account of themselves. Judges, T. Crane and W. Naylor. On Sunday, at noon, the usual contest took place, 23 recent prize-winners competing for four good prizes given by the landlord. Result of Saturday's contest:—1st, H. Hayes; 2nd and 3rd, J. Clark. Sunday's contest:—1st, C. Whitaker; 2nd, Sam Hardcastle; 3rd, J. Clark; 4th, T. Stead. Judges, J. Melia and W. Naylor.—J. MELIA, Hon. Sec.

SKINNER'S ARMS, LEEDS.

A Linnet singing contest was held February 24th at the Skinners' Arms (better known as the "Old Treacle Pot"), Buslingthorpe Lane, Leeds. The landlord, A. Fishwick, gave three prizes for which 15 good birds competed. Awards: 1st, J. Grainger; 2nd, G. Reed; 3rd, H. Kibler. Judge, Tom Crane.—C. HUNT, Timekeeper (Sec.).

FORTHCOMING CONTEST AT LEIGH.

An all-England Linnet singing contest will be held at the Colliers' Rest, Westleigh Mill, Leigh, on March 9th, for time singing only. The landlord, Mr. Joseph Edwards, will give the following prizes:—1st prize, 12s. 6d.; 2nd, 10s.; 3rd, 7s. 6d.; 4th, 6s.; 5th, 4s. Entrance fee, 1s. per bird. Twopence will be charged to hear the birds sing, to be returned in refreshments. Singing to commence at 2 o'clock prompt.—J. EDWARDS.

BRADFORD.

Sixteen birds competed at the week-end contest held at the Exchange Inn, Wakefield Road, when C. Tarlton judged, and F. Burton was timekeeper. Results: 1st, A. Smith; 2nd, D. Lyles; 3rd, Corporal Simmonds. All Linnet fanciers are cordially invited to visit us.—F.

SKINNINGROVE AND LOFTUS LINNET S.S.

At the second Cup Contest of the season, on February 25th, some splendid singing was heard. Six good prizes and a cup were sung for. 1st and 2nd, C. Rawson; 3rd, M. Dobson; 4th, R. Burnett; 5th, J. C. Havelock; 6th, W. Womack. Judge, F. Deadon; Timekeeper, J. Hart. The usual week-end contest was held at Staithes, when some wonderful singing was heard. There were 21 competitors, the winning, second, third, and fourth birds belonging to M. Dobson. F. Canby judged. A table show was held for Brownies the same night, when eight birds were placed for judging, F. Canby and F. Deadon making the awards. First prize, C. Rawson; second and third, M. Dobson; fourth, J. C. Havelock.—M. DOBSON, Secretary.

ELLERBY, LANE BANK, LEEDS.

At the Fisherman's Hut, Ellerby, Lane Bank, Leeds, a Linnet contest was held, open to all Yorkshire, when Mr. C. Tobin gave three splendid prizes. The large company present were delighted with some real good singing. The judges, Messrs. Jackson and Towers, awarded the first, second, and third prizes to Mr. H. Allen. His birds were in splendid condition, and were acknowledged by all to be a credit to him.—J. DAVISON.

HULL.

Linnet singing contest, North Bridge Hotel, Feb. 16th; 22 picked birds competed for four good prizes; 1st, S. Saul; 2nd, R. Dearlove; 3rd, R. Dearlove; 4th, W. Davison. Judges, E. Mawer, R. Booker. The company heard some classical Linnet singing. Thirtieth Annual Linnet singing contest, Whit. Monday. Anyone wishing to join our society can do so by applying to E. MAWER, Secretary, 14, Eastcheap, or North Bridge Hotel.

PRINCE ALBERT INN, NEWTOWN, LEEDS.

We had, as usual, a week-end contest, held at the Prince Albert Inn, on Jan. 13th, when 21 birds sang for three special prizes, given by the landlord, Mr. J. R. Saynor. Judges, S. Green and B. Jackson. Result: H. Allen, 1st, 2nd and 3rd. Also a contest, Feb. 10th, when 17 picked birds sang for three good prizes, given by the above landlord. Judges, J. Binner and B. Jackson. Result: H. Allen, 1st and 2nd; F. Allen, 3rd. Contest, February 17th, when 12 birds competed for three good prizes, given by the above landlord. Judges, E. Wood and J. Binner. Result: H. Allen, 1st, 2nd and 3rd. —E. WOOD, Hon. Sec.

WARRINGTON L.S.A.

A grand contest was held at the Alexandra Inn, February 16th, when 18 of the best birds in town competed for four good prizes, which were given by the landlord, Mr. R. Thompson, the singing being a real treat, everybody present being well satisfied. The winner being a credit to the owner. The birds were in charge of Messrs. S. Leigh and J. Archer (judges); timekeeper, Mr. J. Ball. 1, T. Crawford; 2, W. Leah; 3, C. Turner; 4, T. Armitage.—G. TRYNER (Hon. Sec.).

Wake up, Dorset!

Why not a Cage Bird Society for this district?—a correspondent, "Durnovarian," writes to ask. We are all behind. There are plenty of fanciers in this town (Dorchester) alone. Cannot some more able pen than mine give them a waking up?

CANARY NOTES IN BRIEF.

BY CLAUDE ST. JOHN.

MATING UP MENTALLY.

This term might fittingly sum up the proper work of the Canary breeder at the present time. To mate the birds in actuality just now, strong though the temptation may be at times, is still to be discouraged. But to go over the stock and carefully weigh the points of each prospective pair mentally should form a very valuable and instructive exercise for the next week or two. In this way all the pros and cons concerning each bird can be very fully considered, and thrashed out, and if one has, in addition, a well-kept breeding register and pedigree-book, with notes referring to the breeding of the birds, and any particular feature they may appear to transmit strongly to their offspring, they should be able to match each pair so as to work the greatest improvement possible amongst the young that are bred. It is by such careful plodding work as this that the fancier with a lean purse may ultimately breed the highest-class stock from cheap and mediocre originals. Naturally, one should use only the best stock available for mating; but, after all, the very best stock is of little avail if injudiciously mated. Brains and a good judgment count most in these matters.

ITEMS OF DIET.

It will be time now to commence to feed up the cocks prior to mating. This does not imply that they should be crammed with heaps of rich and stimulating food. A small teaspoonful of egg food, once or twice a week —or when one wishes to experiment without the use of this highly dangerous (?) food, a piece of bread dipped in hot milk and sprinkled with maw seed will make a very good substitute—will suffice. A pinch of niga once or twice a week will form a valuable addition for the hens. Another very valuable item, though not exactly a food, which often gets thrown away as waste, are the shells of the eggs used in feeding the birds. These should always be preserved, dried in an oven, pounded or crushed fine, and given to the hen birds with the sand or grit all through the spring and breeding season. They are greatly relished, and provide excellent material for the shells of the eggs the Canaries are expected to produce themselves.

IS RAPE SEED LOWERING?

Writing of food brings this question in mind. Here is an extract which gives the general opinion about rape seed:—"Birds which are too fat can be brought again to their normal condition if you give them rape seed only, and a piece of apple. . . and green food." This gives the sum and substance of what practically all authorities on bird-feeding have said. And yet, beside this, we have chemical analyses of various authorities to show that rape contains very high feeding and fattening properties. Then there is the fact that rape is largely used as a food for fattening cattle. In my own experience I have seen birds which have been fed for a time solely, or nearly so, upon rape, which were literally blocked up with fat. Therefore it becomes an interesting question whether science, backed by the practical experience of stock breeders, or the unwritten traditions of the bird fancier are correct. Personally, whatever may be the experience of others, I have long been forced to the opinion that a rape seed diet, far from being a starvation diet, is an exceptionally nourishing one. But perhaps others would like to give their experience with a rape seed diet.

ILLUSTRATED IDEAS

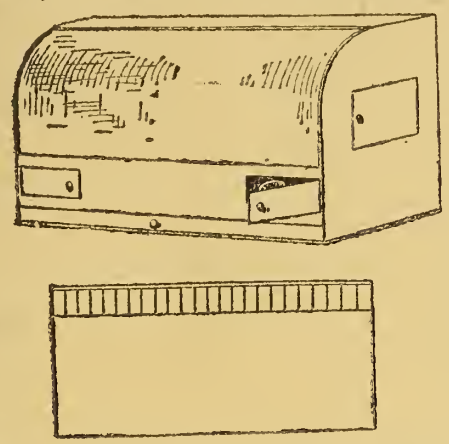
Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 79.

A "MEATING-OFF" CAGE.

Sent by W. C. H. Whythe, 23, Montefiore Street, Queen's Road, Battersea, S.W.

I herewith send you my idea of a "meating-off" cage for Softbills, which has this advantage, it can afterwards be used as a stock, or house cage for any of the smaller species. It is especially useful to the amateur. The length is 24 inches, width 14 inches, height 15 inches. It has three or four perches, all on a level, a tin-bottomed sand-tray, and two swing



in or out feeding vessels. The height of front-piece (which carries the feeders) is 8 inches over all. The door should be of good size; from 4 inches square, to 6 inches by 5 inches. The low front is covered with canvas (or other suitable material), fixed with drawing-pins, or tacks. The lower figure in my sketch shows the back of the cage, which is wired to 1½ inches from the top, so the fancier can always see how his birds are going on without at the same time disturbing them.—W. C. H. WHYTHE.

No. 80.

A NOVEL FLOWER POT NEST.

Sent by F. Pawson, West View, Garstang, Lancs.

I herewith enclose you a rough sketch of a novel, and, at the same time, most useful nesting receptacle for Foreign Birds,

such as Zebra Finches, Ribbon Finches, etc. I have used it with success for a number of years, both in cage and aviary. Procure some flower pots 6 inches deep; then chip the hole at the bottom with a small hammer until it is 1½ inches in diameter. They are then ready for use. Fig. 1 shows the wire for hanging up the pot. Fig. 2 shows the pot in position, either in cage or aviary. All that is required is to place a handful of hay or moss inside the pot before hanging it up.—F. PAWSON.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

Many tales are told concerning the marvellous intelligence and sagacity of birds, especially of those which are, to a certain extent at least, gifted with the faculty of human speech. One of these, a Magpie, whose owner kept a toll-gate, learned to shout out "gate ahoy," whenever his mistress, in preparing a meal, had placed any particularly appetising food upon the table. The woman, thinking a traveller called, would run out to open the gate, and while she was gone the clever bird made off with the dainty morsel.

Uncle Peter knows a green Parrot who will sing and dance in perfect imitation of the Swiss peasants with whom he lives, and whenever anyone goes to the house the Parrot always offers to shake hands with them. "Touche la patte, touche la patte à Jacquot," he says, "Shake hands with Jacko," holding out his right foot in the most enticing manner. But woe betide those who accept his invitation. His sharp beak is through their fingers in an instant, and it is by no means easy to make him let go. He is a South American bird, but Parrots are found also in Africa, Asia, and Australia. The Continent of Europe alone has no native Parrot.

** Clever Crows.

There is an amusing story told about some crows. An officer was lying ill in a house which stood near an immense banyan tree. In this a colony of tame crows had made their home. Whenever the nurse of the officer left him alone, his bird neighbours would leave their perch, and visit him by the dozen. Nothing escaped their notice; what they could not eat they destroyed, if they could. "They tore my towels," says the officer, "bored holes in my uniform, stole the buttons from my coat, and smashed my bottles. They stood in rows on the window sill, and they drank from the bath, all the time quarelling together and making a frightful din. When the nurse came in the air would be darkened with the wings of the impudent creatures, hastening beyond his reach." As the officer got back to health and strength the crows grew more respectful. At last their visits became a source of amusement to him, and the crows found in him a friend and teacher.—Sent by ROSE POON, aged 15, 81, Chalk Farm Road, N.W.

* The Siskin.

This little bird has been known in several instances to breed with us in its natural wild condition, but its nesting home is in Russia, Germay, and north-western Europe. It has been known to build in furze bushes, and also close to the trunk of a fir-tree, where a projecting bough afforded support for the structure. The nest is composed of similar materials to the Chaffinch's, and the eggs present a good deal of resemblance to those of the Goldfinch, with a little inferiority in size.—Sent by J. CURD, age 10½ years, Westeria Villa, Wateringbury, Kent.

* Jack.

We took a young Jackdaw from a nest when only a few weeks old; he was not at all pretty, as he was covered with little blue quills, and his beak seemed out of proportion to the rest of his body. He grew rapidly; in fact, one could almost see the difference from day to day. We fed him chiefly on soaked barley meal, and occasionally a little finely chopped meat or hard boiled egg mixed with biscuits. When he was old enough to look after himself he was allowed the run of the garden, but for safety's sake one wing was clipped. He never went outside the garden, keeping very close to the house. At first he had one or two very narrow escapes from the cat, but he soon learnt to avoid it by keeping to the trees and roof of the house. When any of the family were with him he was not at all afraid of the cat, and even used to stand on it and pull its fur and tail. When about ten months old, Jack began to talk, and soon said "Come on" and "Jack" quite plainly. Although he never concealed anything, like most Jackdaws, he would climb in at bed-room windows and drop things out; also he was somewhat mischievous in the garden, digging up bulbs and seeds and destroying labels. He was very particular as to his friends, and would only go to members of the family, being especially fond of his master. He was extremely tame and liked sitting on our shoulders and pecking our ears. After we had had him about 15 months we went away for a holiday; he disappeared just before we returned, and we never saw him again.—E. A. H. (No name or address given.)

ESTABLISHED 102 YEARS.

HINDHAUGH'S 'SPANISH' SEED.

Absolutely the finest the World produces—Boldest and Cleanest.

MONEY CAN NOT BUY FINER.

SPECIAL OFFER:—56lbs. for 13/- Carriage paid in U.K. Cloth bag included gross (excepting Ireland).

This very special offer is made to introduce this "GRANDEST OF ALL SPANISH CANARY SEED" to all bird fanciers and includes delivery to any station in England, Wales and Scotland having through communication with the North Eastern Railway from Newcastle, by passenger train.

DISTANCE NO OBJECT.

We quote as follows:—

"Sample A"	**Finest obtainable Re-cleaned Spanish Canary Seed..**	**10/- per 56 lbs.,**	**2/9 per 14 lbs.**
"Sample B"	**Very Fine Bold Re-cleaned Spanish Canary Seed ..**	**9/- " "**	**2/6 " "**
"Sample C"	**Really Good Bold Re-cleaned Spanish Seed .. ..**	**7/- " "**	**2/- " "**

Packed in paper parcels up to 28lbs., free. Over 28lbs. should have **3d.** extra remitted for cost of cloth bag to ensure safe delivery. *These prices are free on rail.*

Carriage by passenger train (payable by buyer) is only:—(in England, Wales and Scotland)

Above 50 miles and not exceeding 100 miles:—7d. for 14lbs.	11d. for 28lbs.	1/9 for 56lbs.
100 " " " 200 " 10d. "	1/2 "	2/4 "
Over 200 any distance .. " .. .. 11d. "	1/6 "	2/11 "

Newcastle-on-Tyne.

AN OUTSIDER'S IMPRESSIONS OF THE PALACE SHOW.

By F. Finn, B.A., F.Z.S.

The Palace Show may be taken as the great annual avicultural festival, and I hope that those who attended it, or who read of it in "C.-B.," will not be too hard on the reflections of one outside the exhibiting fraternity. For I must admit that the only experience of exhibiting I ever went through was to enter a Java Sparrow in a selling class at a small —very small—local show in the days of my youth. The drinking-hole of the cage was too large, and the show was out-of-doors in a tent; but time heals all wounds, and I have always solaced myself for the bitterness of the memory by hoping that Mr. Java enjoyed his freedom. This by the way.

The Canaries, especially at the show, I looked upon with awe, as matters for experts; I can tell the "bent-pin" shapes from the straight ones, and make shift to discriminate between a Norwich and a Yorkshire, but I don't aspire to criticise form.

WHY NOT BRITISH SONG CANARIES?

One thing, however, I would like to say. I strayed into the little room set apart for the Rollers and their admirers, and, as I listened to the dreamy, drooling, dithering productions of the minstrels of the Fatherland, and contrasted it with the bluff, if somewhat boisterous, melody of the British Canaries outside, a thought struck me. After all, the big public does like "more singers," and why should we not have our British style of song for British-bred birds, and not borrow everything from Germany? I don't say we should not eliminate some of the crudities from our birds' performances—such as that note which is so strikingly reminiscent of an infant chicken which has wandered round to the back of the coop and feels all too sure that it will never see home and mother again—and, I suppose, they ought not to be allowed to "schnitter," "schnatter," and "aufzug," whatever these weird expressions may mean. But what I mean is that an uncultivated British Canary sings like a bird, while the high-and-well-born Teutonic gentleman is—well, a musical box. Of all the German Canaries I have heard, the breed procurable in the East End at 4s. 6d. a time, commends itself to me as well as any, and I find my non-fancier friends are astonished at its excellence. I don't want to poke fun at the outcome of the praiseworthy patience of the breeders across the water, exercised for a hundred years, but I think we can do with a line of our own as well.

SOME POINTS OF COLOUR.

Musing on such heresies I wandered round among the Britishers. Here there was much to cheer and edify, especially in the fact that the Greenfinches were green, and not bronze Finches, as one sometimes sees them. Not that I mind colour-feeding when this only carries the colouration of the bird to its logical conclusion, so to speak; a colour-fed bird often reminds one of the remark that Turner made about one of his sunset pictures. "I don't remember ever seeing a sunset like that," said a friend. "No," said the artist, "but wouldn't you like to?" A world where all the wild birds were as bright as some of our friends can get them in a cage would be a gay place indeed. Talking of brightness, why are not Starlings judged for gloss? The point that takes all judges' eyes is evidently spangling. But the best spangled birds are hens, and though "ladies first" may be all right in our dealings with our own species, it is rather unusual in our treatment of birds. I could not help thinking this as a beautifully glossed, albeit scantily spotted, old cock pecked in a friendly way at my finger, and then started off in the "variety entertainment" style of song characteristic of his species, as gaily as if he were on his native chimney-pot. I suppose Parrots have driven out Starlings as pet birds and talkers; but some are even now trained occasionally. I heard of one in Derbyshire the other day which talked as plainly as a person.

Talking Jays turn up now and then, too, but a Jay has disadvantages as an indoor pet that a Starling does not share, being so much smaller.

THE HEDGE SPARROW FOR THE BENCH.

I never can understand why the Hedge Sparrow does not turn up on the show bench unless he happens to be "rare-feathered" like the Cinnamon one that appeared this time. Why not have a class for Hedge Sparrows? They are as good as Twites anyhow, and would have a difficulty in being as "ordinary" as Corn Buntings. They sing; they have the delicate shape and pleasing outlines of a Softbill, while easier to keep than a good many Finches, and some, at any rate, are phenomenally steady. They really deserve a chance, and I hope some day they will get it. Perhaps then people will realise that they are not really Sparrows, but poor relations of that born aristocrat, Cock Robin, and respect them accordingly. If ever a Softbill is to be crossed with a Finch, I think the Hedge Sparrow would be the most likely one to try, as he lives so much on seed.

I found the "Foreign Bird in British Class" difficulty still provoking much discussion. There seems to have been a mighty immigration of Meadow Buntings of late to allow five to appear. I don't know who put a small German travelling-cage on top of the abode of one of these birds, with a ticket inscribed "just come over," but the allusion was appreciated.

It is surely time some painstaking fanciers gathered together with a standard British bird book and settled what Britishers could be called "casuals"; then it could be ordained that such could have a class to themselves. It seemed to me that one aviculturist present put the limit very fairly when he said you could fairly call a bird British when you knew you could find it to a certainty somewhere at some season in any year.

A DEMOCRATIC VIEW OF FOREIGN BIRDS.

I never go to the Foreign section nowadays without feeling that the glory has departed therefrom. Not that there were not a lot of nice things on view at the Palace this time, as there always are, and one species at least, the Rufus-backed Mannikin, graced the show-bench for the first time. But it is not rarities that keep a show alive; what we want are classes for the cheap and hardy birds that everyone can buy and keep. The rare birds interest me most, I must admit, from a scientific point of view. But from that of personal taste give me the common ones, I would say, in many cases. Where will you find a Parrakeet to equal the Budgerigar among the rarities? What Finch is such a model of wax-like condition as the humble Java? And what Softbill is so hardy, bright, and musical as the Pekin? Give all these classes to themselves; the rarities will benefit by increased entry fees and gate-money. It is true that, as Mr. Seth Smith suggested to me, so many people keep their birds in aviaries nowadays, and, of course, don't care to catch them up for showing, for which, of course, such birds would be too unsteady. But the cheap birds I advocate are just the ones for people who haven't got aviaries, while if a man has a really rare thing he is likely to show it, aviary kept or not.

I have always had much sympathy with the Irish Socialist who said that "one man is as good as another—in fact, a great deal better!" Apply this to birds, and you see my point. Let Foreign bird keepers give the common birds a chance, as British bird men have done, and everyone will benefit.

SCRATCH BIRDS.

The Foreign bird people need to learn, however, that one cage isn't as good as another, whatever one may think of the inmates thereof. Why some people apparently send their birds to show in their living cages is a problem not easy of solution; but it only shows that Foreign bird showing is not taken seriously, so to speak, as is the exhibition of Britishers, with their various requirements so carefully thought out.

That the Foreign birds take the fancy of the general public is beyond question, especially when there is anything large and sensational, such as the Satanic-looking black Banksian Cockatoos on this occasion. Here again is a type of bird to be encouraged. I don't know whether black Cockatoos ever talk, but the Parrots and Cockatoos that do should be encouraged, and prizes should be given for talking. The Foreign bird Fancy might be the most popular of all after the invincible Canary, and I hope some day to see it so yet.

BRADFORD (EAST) O.S.

First show of the season at Headquarters, Park Chapel Schools, February 23rd. Three gold medals and £4 in money specials were competed for at five shows during the year, which caused entries to turn up well, and some real good Yorkshires were on view. Five new members were made at the last meeting, which brings the total up to 36, a grand achievement for four months' work on the part of members, each of whom seems to be desirous of doing his best for the welfare of the Society. Everything passed off well, keen competition being the order of the day both in champion and novice sections, providing Mr. R. Halliday, the judge, with a stiff afternoon's work. His awards were well received. There was a good sprinkling of visitors during the afternoon. Points were gained in the champion section by W. Cruise, 1st (most points); C. Cowgill, 2nd; J. Farrar and H. Hill, tie for 3rd. In the novice classes, 1st (most points), O. Priestley; 2nd, W. Stables; Messrs. Chapman and Bateman and G. White tie for 3rd (most points). The entries reached the respectable total of 166, every class but one being well filled.

CHAMPION CLASSES.—YELL. YORKS.: 1, Cruise; 2, hc, Cowgill; 3, Mann; vhc, Hill; c, Farrar. BUFF: 1, Cruise; 2, Mann; 3, vhc, Rushworth; hc, Cowgill; c, Gelder. YELL. HEN: 1, Cruise; 2, c, Farrar; 3, Cowgill; vhc, Cruise; hc, Hill. BUFF: 1, 3, Cruise; 2, Hill; vhc, c, Farrar; hc, Rushworth. NOVICE CLASSES.—YELL. YORKS: 1, hc, Wilkinson Bros.; 2, Chapman and Bateman; 3, c, Priestley; vhc, Northrop. BUFF: 1, White; 2, vhc, Stables; 3, Stewart; hc, Chapman and Bateman; c, Northrop. YELL. HEN: 1, White; 2, Chapman and Bateman; 3, c, Wilson; vhc, Stables; hc, Peacock. BUFF: 1, 2, Priestley; 3, Stables; vhc, Walker; hc, c, Laycock. SELL. A.V. YORKS, 12/6: 1, Rushworth; 2, Stewart; 3, Priestley; vhc, Gelder; hc, Cowgill HEN, 10/6: 1, Greenwood; 2, Gelder.

FOREIGN BIRDS AT THE PALACE.

By Wesley T. Page, F.Z.S.

The Foreign Bird Section, if not abnormal, was certainly ahead of recent years, and the management could not very well have been improved upon, the one drawback, if it could be counted such, being possibly the elaborate precautions against draught, which shut off the light from some of the exhibits, and while on the management topic it would certainly conduce to the comfort of visitors, if the birds were staged a foot higher in this section, as during the congested state of the aisles on Saturday afternoon, viewing this section was a most uncomfortable proceeding, for it was impossible in the crowd. Again, one could not light without stooping, and this was almost impossible to see the side which was against the avoid noting, that birds which only comparatively recently were in the money, found their places taken by more uncommon species, and themselves left out in the cold. Yet few of the new kinds surpass those now called common (it seems almost heresy to term the bejewelled gems that now come under this designation, common), either in beauty of form or resplendent plumage. It is rather difficult to separate the notables this year, very few standing prominently out from the rest; perhaps the Banksian Cockatoos should receive first notice. Our old friend (an adult female), which has emerged so successfully through many Show seasons, again came out with flying colours and carried off the premier prize; but the birds which claimed most attention were a reputed pair of the same species, which carried off second prize; possibly they are a true pair, and though some seem to think the almost self coloured bird was a different species, there is little doubt but that it is an adult male (*Calyptorhynchus banksi*), and a very fine and handsome specimen, and that the other bird is either an immature male or adult female, possibly the latter. In this the male, when adult, entirely lacks the whitish tawny spots of the female. Another year should decide the point, and if they turn out a true pair, it is to be hoped their fortunate owner, Sir C. Lawes Wittewronge, Bart., will make an attempt to breed these unique and striking, if sombre coloured, birds. In same class were found fine specimens of the uncommon Senegal Parrot, Red and Blue Macaws, Sulphur Crested Cockatoo, Blue-fronted Amazon Red-sided Eclectus, etc., all attracting much attention by their resplendent plumage and sleek condition, and some also by their loquacity. In the class for Parrakeets there was quite a galaxy of talent. A lovely pair of Bourke's (see plate) being rightly first, altogether one of the best pairs I remember to have seen, their soft and chastely-coloured plumage attracting general admiration; this rare species was bred last season by that successful fancier, Mr. Fascy. Another absolutely unique exhibit (which I believe to be a first appearance on the show bench), was the rare Blue-banded Parrakeet (*Neophema venusta*), and though a wee bit rough, it is hard to understand how such an exhibit could have been passed without a card. Its description is roughly as follows:—Prevailing colour, lightish olive-green; forehead crossed by a narrow band of rich blue, bordered above by lighter blue; lores, abdomen, and under tail coverts, yellow; tail, central feathers, blueish-green, outer apparently blue but have their inner webs black; total length, 9 inches. Other uncommon and beautiful exhibits were the Red-vented Blue-bonnet Parrakeets, in perfect condition, and lack of space alone prevents a description. In the class for Waxbills, etc., there was quite an array of the commoner species, all being very beautiful, and in finest condition, Mrs. Warren Vernon's first prize Zebra Waxbills making quite a pretty picture cuddling in their cocoanut nest. In the class for Grassfinches, etc., Mr. Hawkins' Violet-eared Waxbill secured premier honours, and one does not wonder at these lovely birds being described as a "perfect dream of beauty," it was certainly one of the most perfect specimens I have seen. Another exquisite exhibit by same owner was a pair of the uncommon Vinaceous Fire Finches, their chaste beauty being simply beyond description in space at our disposal. Mr. Townsend's rare Rufous-backed Mannikins were in faultless condition—a first appearance on the show bench—and were certainly very hardly treated in only getting a vhc. In the class for Grosbeaks there was an exquisite pair of Cuba Finches taking premier honours, and uncommon exhibits of Quail Finches, very rare African Rock Bunting, and a pair of Black-headed Siskins, the female of which I do not remember to have seen before. In the class for Tanagers there was the usual array of gorgeous plumage, Mr. Townsend's well-known and lovely Black-backed Tanager being to my mind the most beautiful, though the same owner's beautiful, but not full-plumaged Yellow-winged Sugar bird (see plate) was placed above it. Mr. Harrison's Magpie Tanager was certainly a treat to look at, its spotless condition, striking contrasts of silky white and black plumage fixing attention at once. The rare Cuban Tanager (in rather rough condition) was also exhibited in this class by Mr. Dewhurst. In the class for All Species, Mr. Harrison's lovely Silver-eared Mesias (see plate), in faultless condition, caused me to break the tenth commandment straight away, but space only permits me to most inadequately describe them as a sort of glorified Pekin Robin. The other beautiful and uncommon exhibits I can only mention in White-throated Ground Thrush, Japanese Tits (see plate), Tonracco, Toucan, Mouse bird or Coley (see plate), Glossy Starling, Gold-crowned Troupial (see plate), hardly treated, and others. The last class in this section being that for Any Species of Mule or Hybrid, did not call forth as many entries as one would expect, considering the Hybrids and rumours of Hybrids we have had during the past year. The first prize winner, the Red-mantled Parrakeet (or rather Rosella-Pennant), a wild-caught Hybrid, was certainly one of the most beautiful birds in the Show, the purity, richness, and transparent colouring of its plumage being quite beyond word-painting; perhaps it would be best described as a glorified Rosella. The American Song Sparrow Hybrids, were in fine condition, and handsome, if sombre plumaged birds, somewhat resembling a hen Brambling. The Long-tailed-Masked Grassfinch, and Bicheno-Zebra Finch Hybrids were both handsome birds, in which the parentage of both species was pretty equally brought out in the Hybrids. Mrs. Cooper exhibited a Hybrid said to be an Alario-German Canary, if so, it should have been wrong classed; but there appears to be some doubt as to its actual appearance. Messrs. Elwell and Booths' exhibit appeared to be simply a Combassou; it certainly was not produced from Zebra Finch-Indian Silverbill. The social, and not least pleasing feature of the National Show, was fully up to past years. Again we witnessed the usual and enthusiastic "gathering of the clans" from far and wide. On Saturday the greeting of old friends and birdy acquaintances, and the making of new ones, was quite a task. The National Show of 1907 appeared to be voted by one and all as a huge success. Mr. Camps judged classes 124, 125, and 126, and Mr. Swaysland the remainder of Foreign Bird classes.—W.T.P.

WILD BIRD LIFE.

Thrushes—Wild Hybrids.

The Thrushes and Blackbirds, in size, structure, and mode of feeding, closely resemble each other, but are not by any means equally distributed. In some districts there will be found an abundance of one species and hardly any of the other. I know an isolated farm in Kent where the Blackbirds are so plentiful that they are a perfect nuisance to the occupiers of the land. All kinds of garden produce is raided by them, and the smaller fruit, such as strawberries and currants, are eaten wholesale. Thrushes are scarce, especially song Thrushes, and the big storm cocks only gather in flocks during the autumn, and as the spring advances they pair off and move to quarters more to their liking. It is very difficult indeed to say why some of the Thrushes should not stay and nest in the neighbourhood, for nearly all our resident birds do so, and many of the migrants, including Wrynecks, Nightingales, Whitethroats, &c. Here in this district the Thrushes are very plentiful, and comparatively few Blackbirds are seen. Our birds are big, bold fellows with the most regular spotting imaginable, but very pale in colour, even in the spring months when most birds put on their gayest attire. Further south the birds are smaller, but they make up for this deficiency by being very richly coloured. There is evidently something in the locality (possibly the food supply) which governs this. We do not get many Bullfinches here, but those that we see are splendid specimens, whereas the Goldfinches are the most miserable, dirty, little birds imaginable, so it is evident that the Goldfinches do not thrive upon the same wild diet as the gorgeous Bullfinches. As a general rule the best coloured birds of any species are bred and reared in a country where the atmosphere is humid and moist.

A One Time Common Bird.

During the last half-century we have lost several birds from our list of British birds. The Bittern and the Great Bustard are no longer to be found, neither is the Ruff and the Reeve, but these birds were only common in the country places, on the wild downs and marshes. Another bird, the Kite, was, like our common Sparrow, a dweller in our towns and gardens, and was constantly seen in the streets feeding upon the refuse from the horses. We know this was so, as these birds are constantly mentioned in the writing of other times. Gradually the birds were driven out, until now there is only a pair or two left; the secret of the locality is guarded as closely as possible. Although they may manage to exist a few more years, it is very unlikely they will ever again become numerous —much less common—in this country.

Bird Tragedy.

One of the most curious bird tragedies known is that possibly of a large Cormorant. He had been eel fishing, and had swallowed the head and part of the body of the fish, but the remainder was tightly twisted round his neck, so that he eventually died of strangulation.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else. Sold in tins, 3d., 6d., and 1s each.

Advertisements continued from page 199.

FOREIGN BIRDS—continued.

PARROTS. PARROTS.

Those who are in want of a genuine Parrot should send for full particulars; all on one month's trial before paid for.—West Riding Aviaries, Castleford.

CALIFORNIAN MOUNTAIN QUAIL,

twice the size of ordinary Californians, excessively rare, hardy, prolific, usual number of eggs 50 in a season, £4 pair, cheque with order; Latin name, *Callipepla picta*.—William Jamrach, Stoke Newington, London.

BABY AFRICAN GREY PARROTS.

If you require an African Grey Parrot, with red tail, one that will make a talker, buy one of these lovely little pets. These have been specially brought up by hand, and are quite tame. They are whistling and chattering. The prices are 18/- and 20/- each. New indestructible Parrot Cage, 4/11. Approval with plea sure. Trade supplied.

R. J. ADAMS,
Park Place, LIVERPOOL.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together and counted as one Advertisement.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

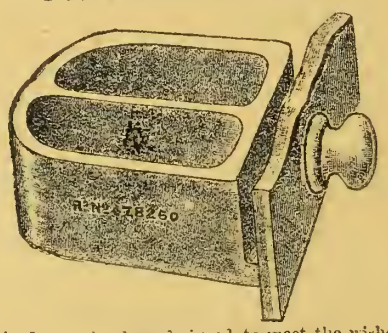
PARR'S POTTERY

NEST PANS, DRINKERS, FOUNTAINS, BATHS (Oval, Round and Square).

"Duplex"
Cut Partition Drawer.



This drawer has been designed to meet the wishes of Breeders so the foods can be separated instead of mixing together. Thus having one drawer instead of two. Made in two sizes.

Mr. C. A. House, Claude St. John and J. North all say it is a good idea.

Wire door falls into the groove and is not in contact with food.

Canary nest eggs, 5d. dozen, post paid.—Fraser, Specialist, 101, Cross-lane, Salford.

— 3/- DOZEN.
The original challenge Canary nest pan, which has been on the market for the past 16 years, and has also been a pattern for others to work from. Have sold more pans than any other man living. Used and recommended by Mr. John Robson, and the only pan to-day that is sent out properly lined, made of white ware, swansdown lined, with wire bracket and screw hooks, all complete, and carriage paid, 3/- dozen, 1/9 half dozen, large or small size. Trade supplied. Tom Thomas, Bird Dealer, Neath.

IMPROVED WIRE FRONTS.
Sizes stocked:—12 by 10 or 12, 3d. each; 14 by 12, 3½d.; 16 by 12, 4d.; 18 by 12, 4½d.; 20 by 12, 5d.; 24 by 14, 6d.; other sizes to order, same rate of price; large Fronts, about 3d. per square foot, according to strength; Yorkshire Show, 15s. dozen; Baths, Seed Boxes, etc. Please note.—These fronts are made by experienced workmen, sliding door and seed holes in ready for use.—E. Bunner and Sons, Cage Makers, Copperas Hill, Liverpool.

RINGS. Aluminium closed Canary Rings (adopted by B.R.C.C.), year, and numbered consecutively, 4-, 100, 6d. dozen. Improved Rings, to open, 2,6 half gross, 6d. dozen.—Hughes, Hampton Hill, Middlesex.

ARE YOUR BIRDS READY?
Have you got the correct Nesting Material?

DODGE'S FICTITIOUS COW HAIR

is the only material with which birds will build a natural nest. They build as soon as you give it to them, and being a non-conductor the eggs are kept warm when the hen is off.

Try it and you will see a nest.

2/6 per lb., sufficient for about 90 nests. ½ lb. sample, 1/-.

MORTEN DODGE, M.P.S.
Manufacturing Chemist,
STRANGEWAYS, MANCHESTER.

WRIGGLESWORTH & SONS

154, FLEET STREET, LONDON, E.C.

OPINIONS OF THE PRESS.

LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."

COUNTRY LIFE: ". . . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

BIRD NOTES

Grand talking Parrot, amusing pet, 30/-, worth £5; approval.—Baker, Herbert-st., Bedminster.

MATTHEWS, BIRDCATCHER.

Linnet singers.—Are you aware that where my Linnets are caught they are the best and keenest singers that it is possible to get, and Linnet singers bring their birds and put them under them to get their song? All my best singers have been caught from this place, and I have sent them all over England for contest birds. I have a grand lot of nice steady birds, sure to make the best for contest singing and muling, been well caged and getting nicely on song, 1/6 each. Also a few in full song, 2/6. I send all birds on seven days' approval at my risk; also a packet of my special, clean gathered wild seeds, 3d. extra, best that it is possible to get, to keep them in vigour, song, and health; all on approval.—44, George-st., Hyde, Cheshire.

EXHIBITORS AND MULE BREEDERS.

Real Siberian Goldfinches

READ OF SUCCESS.

Last arrival of these wonderful Siberians, with full scarlet-coloured blazes, like giants; full moulted, and perfect in every way, hundreds of winners sold every year; price 5s., 6s., and 7s. 6d. each; two, 9s.; hundreds to select from. Just a few Testimonials, scores like these:—Mr. McNunn Castle Douglas, Nov. 25, 1906. "Glad to let you know the Siberian I got in 1904 won 1st and Spl. Dalbeathe on Jan. 1, 1905. Since then 1st Kirkcudbright; again this year at same place another 1st and Spl., also 1st and Spl. at Carlisle, 1906. 1st and Spl. Ayr and Silver Medal. Send me another good one at once." Mr. Murdock, Girvan: "Siberian Goldfinch arrived safe, and won first prize. Thanks for same." Mr. Richardson, Thurso, Nov. 16, '05: "Send Siberian Goldfinch, Bullfinch, and Siskin for enclosed P.O. A friend of mine won first last year with Siberian purchased from you." Mr. Ewan, Kirn, writes: "Glad to say Goldfinch won first and special at our show." Mr. Mark, Selkirk, writes, 1905: "Russian Goldfinch to hand; he was singing two hours after arrival." Price, Russian cock Goldfinches, 4s. and 5s.; two, 7s. 6d.; Siberian cock Bullfinches, like Blackbirds, 5s. and 6s.

Show Cages for any of above Birds, 2/- each.

J. SANDIFORD, BIRD SPECIALIST, PRESTON, LANCS.

Established 1879.

SIBERIAN LINNETS,

2/6; Siberian Goldfinches, 5/6; Siberian Bullfinches, 5/6; all specially imported.—Varney, Stratford, London.

HARRY ALLEN.

Still again 1st and 2nd at Newtown, and 1st at Sheffield. There is no doubt about it, I am disposing of the finest lot of Linnets ever seen. Big fine cock Linnets, well pencilled, stand well, 2/- and 2/6; extra picked birds, sure mulers, 3/- and 3/6 each. Breeders, please give me a trial order. Cock Linnets, singing grand, in a polished singing contest cage, with a packet of special mixture, and instructions how to feed, 4/6 the lot, real bargains; young house moulted Linnets, taught by my champions, 7/6 and 8/6 each, including singing cage, I can recommend these birds to anyone as sure mulers and future contest winners. I have some hen Canaries, already paired with cock Linnets, one pair, with box cage, 7/6. To encourage Linnet singing, I am selling books containing my secret of making Linnets sing at one another with their wings down, how to moult, and how to train; send stamped envelope for particulars. All bird fanciers should have this.—"8, Handel-ter., Collingwood, Surrey. Dear Sir,—I got your book this morning. I am greatly pleased with it.—J. Wright to H. Allen."—"74, Prince Albert-st., Crosshill, Glasgow. Dear Sir,—Bird and cage arrived here quite safe on Tuesday. I am very well pleased with it, and also the cage. I will be very pleased to recommend you to my friends.—Yours truly, W. Montgomery, breeder and exhibitor, to H. Allen."—I am receiving testimonials every day. Four packets of my special mixture, 1/-; contest cages, same as I sung my birds in at Sheffield, half-a-dozen 7/6; all Linnet singers should have these cages; see singing results and last week's advert.—H. Allen, 42, Brown Hill-cres., Harehills-lane, Leeds.

Feb. 14 was the Birds' Wedding Day.

LATEST OPINION OF MACKLEY BROS.' BIRDS.

"High Street, Uppingham, Rutland. Jan. 12th, 1907. Dear Sirs,—The two Birds arrived safe, in the PICTURE OF HEALTH; they are the BEST TYPE of Norwich Plainhead I ever saw. I am HIGHLY DELIGHTED with them. I shall certainly recommend you to all I have the opportunity of so doing. I never had the favour done me from any one FIRM but yours by sending birds on approval without the Deposit System. Trusting the Firm of MACKLEY BROS. may live and reign for the sake of their customers.—Yours faithfully, J. Waddingham to Mackley Bros."

Postal and Telegraphic Address: **MACKLEY BROS., *(Jacob Mackley),* NORWICH.**

A FEW grand birds for sale, colour fed, cocks 10/6, hens 7/6; approval three days.—Willis, 34, Clapham-rd., London.

NORWICH Plainheads, grand trim, ready for immediate pairing, correctly matched, 8/6, 10/6 pair upwards. The 8/6 are sterling value. My half-guinea pairs are tip-top quality; no better in England for the money; model pairs at the price; approval freely.—J. Savage, Westfield Aviaries, Poole.

G. CHAPMAN, Haymarket, Leicester, has for disposal the finest selection of high-class Norwich Canaries in the Midlands; splendid natural colour cocks, bred from winners, 5/6, 6/6, 7/6, and 10/6 each; hens to match, 2/6, 3/-, 3/6, and 4/- each; properly matched pairs, 8/-, 9/-, 10/-, and 12/6 a pair.

JUST published, Mr. J. H. Payne's latest lecture on the Norwich Plainhead Canary. This has been issued in pamphlet form, and containing as it does some most valuable hints on this popular and profitable variety, should be read by every Norwich fancier. "All About the Norwich Plainhead Canary," price one penny, postage paid 1½d., from F. Carl, 154, Fleet-st., London.

SPECIAL! Special!! Really good selection of high-class Plainheads, healthy and typical, judiciously matched prize-bred pairs, 8/6, 10/-, 12/6, 15/-, 20/-, 30/- upwards; odd hens and cocks, on song, reasonable, all cold room bred, and willingly on approval anywhere; highest satisfaction guaranteed with birds that will tempt purchasers to give me further orders. H. Amiss, 69, Ashby-st., Norwich.

MUST clear, owing to emigrating, all my stock and breeding appliances, including five yellow Norwich cocks, two buff Norwich cocks, and seven Norwich hens, one champion yellow Yorkshire cock, and pair of stock Yorkshire, two Cinnamon Norwich cocks, one champion Yellowhammer, also 30-compartment breeding cage and show cages and other utensils; all on approval; stamp reply.—Juo. Smith, 60, Pont-st., Hirst, Morpeth.

WILLIAM JUDD, Midland Counties Aviaries, 120, Belgrave-gate, Leicester. The largest stock of Norwich Canaries in the Midlands; cocks, in full song, 4/6, 5/6; orange yellows, 7/6 and 10/- each; good healthy hens for this year's breeding, 2/6, 3/-; orange yellows, 4/- and 5/- each; pairs properly mated for this year's breeding, unrelated, 7/-, 8/6, 10/6, and 15/- pair; most of these birds have been bred in outdoor aviaries. This is no flattering advertisement, but genuine, with 20 years' references. With my business extending so much, I have had to take larger and more convenient premises. Please note change of address.

CHAMPION NORWICH.

A grand stock of Plainhead Norwich, fed to perfection, pairs from 10/-, cocks from 6/6, hens from 4/-, also a few cinnamons; approval; inspection invited.—W. Growdridge, Clarendon-rd., Hinckley.

OWING TO PRESSURE OF BUSINESS.

Sixty-Norwich, dirt cheap to clear; hens 2/6 to 10/-; cocks 5/- to 15/-. Mr. Lee, West-gate, Southwell, writes: "The birds give great satisfaction."—Pass, Cage Maker, Hucknall Torkard, Notts.

A. C. BURN,

14, Fablan-rd., Fulham, London, has a few Norwich Plainheads, clear and variegated, buff hens and cocks, at 10/- to 20/-, also few matched pairs, 20/-, 25/-, 30/-, all bred from winning strain; can be inspected, or sent on approval, cash or deposit.

WRIGHT AND SON,

84, Heath-rd., Norwich, winners of hundreds of money prizes, also medals, etc., in open competition at Crystal Palace and leading shows. Have some grand stock in Norwich Plainheads for sale; pairs, matched to breed show birds, 10/6, 12/6, 15/- and upwards; prize-bred cocks, 7/6, 10/6 to 20/-; hens, 3/6, 5/6 upwards; all in good breeding condition; approval.

F. EATON,

Breeder of Norwich and Yorkshire Canaries.—I have won this season at Parkgate, Bramley, Sheffield, Goole, Carr Vale, the following prizes:—Four firsts, nine seconds, seven thirds, six fourths, and other cards. I have now a few birds for disposal, same strain as my winners; prices reasonable; can be seen any Saturday or Sunday; stamp reply.—147, Freedom-rd., Walkley, Sheffield.

Fifteen Norwich Hens for 30s.

Last year's birds, outdoors all the summer, all good strong healthy birds.—48, Guildford-rd., South Lambeth, London.

JOHN C. BARNES.

Having selected my own breeding stock, can spare few choice birds, well up in substance, true type, and of grand depth of colour, winner of silver cups 1901, 1902, 1904, 1905, 1906., price reasonable; approval; inspection cordially invited; stamp reply; pairs properly matched.
149, Duncombe Street, Walkley, Sheffield.

A. W. CURTIS,

8, Fabian-rd., Fulham, breeder and exhibitor of high-class Norwich Plainheads; winner of 150 money and special prizes with birds I have bred. See reports City and Suburban, Westminster, West London, and Queen's Park annual shows. Having selected my breeding stock, can spare several matched pairs, unrelated, at 20/-, 25/-, 30/-; good opportunity for novices and others to procure reliable stock birds; can be seen by appointment or sent on approval; deposit with Editor.

EXTRAORDINARY OFFER!

Desiring to clear at once, before commencing breeding again. 50 Norwich and Yorkshires, at the following low prices:—Smart healthy ticked or variegated Norwich hens, 2/9, 3/3, 3/6, 4/-; clear yellows or buff hens, 3/9, 4/3, 5/-, 5/6; few splendid Yorkshire hens, 4/-, 4/6, 5/-, 5/6. Champion Norwich or Yorkshire cocks, splendid songsters, 6/6, 7/6, 8/6; properly matched pairs, 10/6, 12/6, 15/-. All on approval, cash or deposit. Not quarter value to clear: just try one and see what value they are.—R. Hanford, Osmaston-rd., Derby.

Absolute Prices—Not Catch Prices.

The quality for price is not unsurpassable, but cannot be elsewhere equalled. Plainheaded Norwich cocks, 5/-, 6/-, 6/6, 7/6, 10/6, 12/6, 15/- to 40/- upwards. Hens, clear yellow, 3/6, 4/-, 4/6, 5/-, 7/6, 10/6, 15/-, 20/-, 30/-; clear buff, 3/-, 4/-, 5/-, 7/6, 10/6, 15/-, 20/-; ticked or variegated, 2/9, 3/6, 4/-, 5/-, 7/6, 10/6, 15/-; pairs, correctly matched for breeding, 8/6, 10/6, 15/-, 20/- upwards. For extra specials, with good heads, necks and type, state requirements, as I have them, and at a fair price. Travelling cages, 3d. extra. Extended list free. See advertisement on p. 222 of this paper.—W. Rudd, The Bird Specialist, Norwich.

JAMES TAYTON.

Clear orange and buff Norwich Canaries; also exchange five pairs long-distance flying Homers, Fowls, etc.—13, Norfolk-st., Coventry.

SIZE AND QUALITY.

Large marked buff cock, winner of several cards, 14/6; or exchange yellow cock.—Sheppard, 20, New Cross-road.

NOTICE, CALL OR WRITE

and inspect my Norwich. I have a splendid collection in all colours, except greens, and every bird is in the primest condition and feathered like silk; cocks, in full song, 7s. 6d., 8s. 6d., 10s. 6d.; hens, 4s., 4s. 6d., 5s., 5s. 6d.; all on seven days' approval; P.O. or deposit; note, inspection invited any time.—William Shaw, 97, Essex Road, Islington, London, N.

CHAMPION PLAINHEAD CRESTS.

I earnestly ask you for trial order to prove satisfaction. Sent on week's approval at my own risk; cash or deposit. I claim to have best collection in West England, and sold most premier on show bench, which win challenge cups and gold medals. This strain has won 200 prizes. Norwich cocks, Bullfinch type, 6/6, 7/6, 8/6, 10/6, 12/-, 15/-, 20/-; hens, 3/6, 4/6, 5/6, 6/6, 7/6, 10/6, 12/-; Crest and Crestbreds, large big birds, broad-skulled, plenty of feather, reach end beak, cocks, 6/6, 7/6, 8/6, 10/6, 12/-, 15/-, 20/-; Crestbred hens, 3/6, 4/6, 5/6, 6/6, 7/6, 10/6, 12/6; Crest hens, 5/6, 6/6, 7/6, 8/6, 10/6, 12/6; pairs, matched to produce winners, 8/6, 10/6, 12/-, 15/-, 20/-.—C. Baker, Herbert-st., Bedminster.

Champion Norwich Plainheads.

Can spare the following high-class specimens:—1905-bred, clear yellow cock, rare size, type, full of quality, Baker's strain, price 25/-; 1906-bred yellow cock, real topper, can win, price 21/-; ticked yellow cock, stout and typical, price 17/6; monster clear buff cock, Vardy's strain, good chubby type, rare wings and tail carriage, bargain at 21/-; ticked, 1906-bred, buff cock, very large, stout, and typical, nice frosting, Mackley Bros.' champion strain, price 20/-, cost double; two extra large, stout, clear buff hens, Irons' and Vardy's strain, can win anywhere and breed winners, two of the best out, price 10/6 each, honestly worth 25/- each; typical clear yellow hen, good size, 1905-bred, champion breeder, a grand one, Baker's strain, price 12/6; also one 1906-bred, good chubby type, charming hen, only 10/6; massive ticked buff hen, Bullfinch type, a real good one, price 10/6. Buy the right type, ideal Norwich. Above are bargains at double the amount. Many exhibitors supplied recently. All cold-room bred and healthy. Cash with order or deposit. Send at once, before they all go.—Address, George Cubley, 3, Standard-ter., Long Sutton, Lincs.

CHAMPION NORWICH.

Having selected my breeding stock, have a few pairs to part with, from 20/-; no odd hens; same strain as my winners cups, medals, etc.—Boydon, Peckham House, Peckham, S.E.

CHAMPION NORWICH.

I have a few good birds for sale, large Bullfinch type, good heads and feather, best strain in England; many winners sold; approval.—T. Billington, 220, Colwick-rd., Nottingham.

CHAMPION NORWICH.

E. CODLEY, Rishton, nr. Blackburn,

All Birds on approval or Deposit,
Satisfaction Guaranteed.

73. KNOWSLEY ROAD.
NORWICH.

LOOK HERE!

I am anxious to remind you that I have the best stock of Norwich Canaries ever seen in one bird room, having over 500 pairs to select from (including the whole stocks of two noted exhibitors). I can offer you many this season's winners and pairs properly matched for breeding winners. I shall be pleased to send you any birds on seven days' approval, carriage paid. I yearly sell many thousands of birds, and give every customer satisfaction. I guarantee to please you if entrusted with your order. I am now offering exceptional good value in typical Norwich cocks, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, and 25/- each. Hens, 4/-, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6, 12/6 each. Matched pairs, 8/6, 9/6, 10/6, 12/6, 15/-, 17/6, 20/- upwards. I receive many thousands of unsolicited testimonials, of which the following are samples:—"77, Belmont-st., Oldham, March 2nd, 1907. Received bird quite safe. I am more than pleased. It is worth a lot more than I paid you for it. Your honest and straightforward way of dealing is a credit to you. I can confidently recommend you to all my friends.—W. Mitchell, to Miss Storey." "36, Howden-rd., North Shields, March 4th, 1907. Received birds all right. There is every credit due to you. They are a first-class pair—exactly what I wanted. I shall recommend you to all friends.—R. Miller, to Miss Storey." "81, King-st., Cwm. Received Norwich hen in splendid condition. Many thanks for same and your prompt attention.—A. Giles, to Miss Storey." "Clyde House, Durham, March 3rd, 1907. I have instructed Editor to forward you the money for the birds received, which are quite satisfactory, etc.—J. Gregor, to Miss Storey." "44, Hamelton-st., Gorvan. Received bird safe, with thanks. I have seen many birds from England, but never such value as those sent by you. Wishing you every success.—W. Hayes, to Miss Storey." "27, Lenlee-st., Penzance, March 2nd, 1907. Received birds safe. Exceedingly good type. Highly satisfied.—J. Bounder, to Miss Storey." "Castleford, March 2nd, 1907. Bird arrived safe. It is a grand one. I am highly pleased with it.—R. Fenn, to Miss Storey." "Lauriston, Falkirk, March 2nd, 1907. Bird arrived. I am highly pleased with it. Many thanks for your prompt attention to the order.—W. Cooper, to Miss Storey." "2, Windsor-ter., Kilbowie, March 3rd, 1907. Received bird in the pink of condition. I am well satisfied with the way you transact your business.—J. Garseadden, to Miss Storey." I have thousands similar to the above all open for inspection. New illustrated price list post free. Travelling cages, 2d. each. I send all Canaries, carriage paid, on seven days' approval, at my own risk.—Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

See Palace report with birds direct from my own blood, 1st Unflighted Yellow, Class 30, and other prizes, etc.

READ OF SUCCESS FROM BIRDS

I have supplied, also of our noted Wins at all leading Shows, including Derby, Leek, Hinckley, Carlisle, Gateshead, Sunderland, Crewe, Edinburgh, etc., etc. Won this Season—34 Firsts, 26 Seconds, Gold and Silver Medals, 50 Specials, etc. At Hartlepool, N.P.U. Cup Show against all the cup fighters, 8 birds—4 Firsts, 2 Seconds, 2 Thirds.

I am offering for two weeks only Grand Matched Pairs, to breed Winners, at **20/-** pair, must clear. Also other Pairs at **25/, 30/-.** Odd Yellow or Buff Cocks, **10/-, 15/-, 20/-, 25/- 30/-.** Odd Buff Hens, **10/-, 12/-, 15/-, 20/-.** All on approval two days. If you want the blood that wins order at once.

Mr. McIver, Port Glasgow, Jan. 8, 1906.—"Sir, The Norwich Cock you sent me won 1st and Special in class of 11, against all colours." Have scores like this.

Established 1879.

J. SANDIFORD, Canary Breeder, PRESTON, LANCS.

EXCEPTIONAL FINE *Norwich Plainheads.*

Matched pairs, true type and full of quality, **50/-** per pair upwards. Grand typical Norwich Plainhead hens, **30/-** each upwards, sent on approval. Prize bred pairs from **15/6.** Approval.

NOT WHAT WE SAY, BUT WHAT OUR CUSTOMERS WRITE.

Recommended by Mrs. Lewer and Mr. Robson.

Langdon Villa, West-st., Bromley, Kent. February 19th, 1907.—Please find enclosed postal orders. I want you to send me a pair of prize-bred Norwich Plainheads. This is my first transaction with you, but I understand from Mrs. Lewer and Mr. Robson that I can safely put myself in your hands as to selection and fair treatment. Let the bird be as typical as possible.—Yours faithfully, F. E. Wright to Mackley Bros.

AFTER ORDER EXECUTED.

Langdon Villa, West-st., Bromley, Kent. February 22nd, 1907.—The pair of birds arrived safely yesterday morning. I must congratulate you upon the exceptionally fine way in which you have turned them out, and thank you for your very kind and courteous letter, advice, and general treatment of the transaction. I like your method of business, and it is a pleasure to find someone in Norwich who is not too busy to attend to his customers in a kind and courteous spirit. It goes a very long way, at any rate with me, and I shall not overlook you when I am buying again.—Yours faithfully, F. E. Wright to Mackley Bros.

THE SUPERIOR QUALITY

Of my Rollers has again been confirmed at the last Crystal Palace Show. Birds supplied by me for this show have again taken in the open class to all England, first, third, fourth prizes, and vhc and c, in addition to first prize in selling class. I can supply properly matched pairs of the same beautiful strain from 30/- to £4, according to song, and a full guarantee will be given. I have just received a very large consignment of breeding cages and song boxes of newest designs, along with a great number of novelties particularly adapted for the Fancy, all of which are shown in my new and much enlarged catalogue, which will be forwarded on receipt of three stamps to cover postage. Sole agent for Queck's unrivalled tutor organs, price, with latest improvements, £3 7s. 6d., well packed, carriage forward.—C. Rochl, 400, Edgware-rd., W.

MISS STOREY.

Miss Storey has the finest and purest collection of genuine trained Rollers in England, every bird in full song by day and artificial light, singing their pure Roller song. Every bird is cold room bred and kept. These are the genuine Rollers (not cross-bred rubbish). My stock consists of high-class British bred Rollers, bred from and related to the best of contest singers and winners. Cocks, in full song, 15/6, 17/6, 20/-, 23/-, 30/-. A few extra special at 40/-, 50/-, and 60/-. Hens to match same, 4/6, 5/6, 6/6 each. Genuine trained St. Andreasberg Rollers, with full change of song by day and artificial light (no common German rubbish these), 8/6, 10/6, 12/6, 15/-. Pure Roller hens, 3/-, 3/6 each. Hartz Mountain Roller cocks, in full song by day and gaslight, very loud free songsters, 6/-, 6/6, 7/- each. Matched pairs for breeding songsters, 8/6, 9/6. The quality of my birds speaks for itself. I have many thousands of testimonials open for inspection, of which the following are a sample:—"11, Summerson-st., Hellon-le-Hole, March 2nd, 1007. Received Roller safe, in pink of condition. He commenced singing as soon as put into cage. He is really a beauty. I am more than satisfied with him.—R. Allen, to Miss Storey." "Front-row, South Shields, March 2nd, 1907. Received Roller in splendid condition. I am highly pleased with him. He is a beautiful singer.—J. Printers, to Miss Storey." "18, George-rd., Birmingham. Received Roller safely. I am more than pleased with it, being a very nice bird, and lovely singer.—T. Nuttall, to Miss Storey." Allow me to send you one or more birds on approval. You will then be convinced that I supply genuine birds at reasonable prices. New illustrated price list post free. Travelling cages, 2d. each. All Canaries sent carriage paid, on seven days' approval, at my risk.—Miss E. L. Storey, Crowle, Doncaster.

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll, vibrating hollow roll, and charming water bubble roll; one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London. Export a speciality. "The Schools, Overton, Ellesmere.—Hummel arrived, it at once commenced to sing—yes, a song worth listening to. It is the most exquisite songster I ever heard—decidedly a perfect Roller. I may say I never expected such perfection; they are worth all you charge for them. I must thank you for your courtesy, and shall be able to recommend your firm to those who require birds and not rubbish."—F. Robbins, to Varney, Stratford, London, Sole Proprietor and Wholesale Roller Canary Importer and Dealer.

Turnbull."—"January 2nd, 1907.—Birds arrived, are singing well.—R. M. Lee, 79, Mill Street, Crewe."—"Broom, Newton Mears, Glasgow.—The birds arrived in good condition; I am well pleased with such value.—J. Broom."—"January 2nd, 1907, 32, Easson Road, Darlington.—Bird to hand. I like the song wonderfully well, and thank you for your prompt delivery and attention to my instructions.—H. Hutchison."—Send all orders to Varney, Stratford, London.

HARTZ Mountain Roller Cocks,

ALL IN FULL SONG,

and Hens, both imported and Home-bred, in the finest breeding condition. I have the Largest Collection of **Choice Pedigree Roller Hens** ever got together in one lot. They comprise pure Seifert and Trute Hens, and I can honestly recommend these to all breeders wanting Reliable Breeding Stock to produce the best money can buy. You can give 10/6 or more, and cannot get better blood or stock. Can be seen.

IMPORTED—Trained Cocks, 8/6, 10/6, 12/6, 15/-, 20/- and upwards; Hens, same strain, 3/6 and 5/- each, pairs 10/6, 15/-, 20/- All on seven days' approval, cash or deposit.

HARTZ SINGING COCKS 6/6; Extra selected, with better notes, 7/6; Pairs, 9/6. Strong Hens, 2/3 each.

Home-bred (guaranteed), Trained Trute and Seifert Cocks, 10/6, 12/6, 15/-, and 20/- each; Hens, guaranteed same strains, strong, healthy, and in the best of breeding condition, 4/6, 5/- each. These have been purchased direct from the breeder and trainer, and can be recommended. Remember, it is no use breeding from good Cocks and common Hens if you want good results.

Untrained—Strains unknown, Cocks 5/6, 6/6, 7/6; Hens, 3/6.

Full printed Instructions, how to keep in health and song, sent with every bird as for the past 30 years. Beware of copyists and their "catch" methods.

37, Victoria-st., Upper Bangor. February 26th, 1907.—Bird arrived quite safe. I must say we are very pleased indeed with him. He started singing as soon as unpacked.—N. Smith to W. Rudd.

Skegby-rd., Annesley Woodhouse. February 25th, 1907.—I received the bird safe, and had not had him five minutes before he started singing beautifully. I am very much satisfied with it.—Mr. Hayes to W. Rudd.

If you want to know about these beautiful and interesting songsters, send for my book

'Profitable Canary Breeding as Practised in Germany'

By Albert Rettich, Esq., author, breeder, and judge of the leading singing contests. Price 9d., or in larger type and gilt cover, 1/3; to be obtained from the publisher and sole owner of copyright, W. Rudd, or from the office of "Cage Birds."

W. RUDD, The Bird Specialist, NORWICH

HAVING selected my breeding stock, have 20 pairs of grand long upstanding birds, smooth as glass, matched for breeding cinnamon marks; pairs 10/6, 12/6, 15/-; approval.—Dearden, Spring-st., Brighouse, Yorkshire.

GENUINE sale of high-class Yorkshires, all cold room kept, bred from the best winning strain in Yorkshire; hens from 3/6, cocks from 7/6; pairs 11/-; approval, cash or deposit.—John Thomson, 176, Waterloo-rd., Wolverhampton.

COLD-ROOM bred, long, typical Yorkshires, related winners Palace, Reigate, Walthamstow, etc., pairs, properly matched on points and pedigree, from 15/-; 7in. cocks from 10/-; approval.—Hall, 134, Branksome-rd., Brixton.

HIGH-CLASS Yorkshire hens, splendid length, type, and quality, grand buff hens from 4/-, few typical cocks from 6/-; approval anywhere; satisfaction guaranteed.—Greenwood, Colne-rd., Crosshills, Keighley. x269

JOHN C. BARNES.—Having selected my own breeding stock, can spare few grand birds, feathered like wax, very lengthy, perfect position and well on leg, price reasonable; approval; stamp reply.—149, Duncombe Street, Walkley, Sheffield.

SALE 20 pairs of exhibition and stock Yorkshires, in clears, green, and cinnamon marks, for feather, type, and quality unequalled; cocks, 10/- to 30/-; hens, 7/6 to 20/-; pairs, 15/- to 50/-; trios, 20/- to 100/-; week's approval, deposit.—Scott, 34, Tennysou-st., Keighley.

MR. H. HURRELL, 14, Burnwells, Thackley, Bradford, Yorkshire, has some typical hens, clear buffs, greens, variegated, and Cinnamon marks, 8/- and 10/- each, all from exhibition strains, cold-room bred and colour-fed; also few singing cocks, the progeny of same strains, 6/- each.

CHAMPION leggy, upstanding Yorkshires, all cold room kept, and bred from best winning blood in Yorkshire, cocks, 7/6, 8/6, 10/6, 12/6; hens 7/6, 8/6, 10/6; properly mated pairs, 15/-, 17/6, 20/-; approval cash or deposit; 21 years breeder.—Frank Stevens, Great Ayton, Yorkshire.

POWICK'S champion Yorkshires in all classes, the same strain as the winners at all leading shows, cocks, 7s. 6d., 10s. 6d.; hens 5s. 6d., 7s. 6d. each; pairs mated to breed winners, 12s. 6d., 15s. 6d., and 20s. per pair; no rubbish; ten days' approval.—Wm. Powick, Eastfield House, Dewsbury, Yorkshire.

HAVING selected our breeding stock, we find that we can spare a few splendid pink-eyed hens, four grand yellow hens, 5/- each; two buff-marked, extra, 7/6 each; one buff cock, 10/-; approval; deposit.—Bray and Charlesworth, Underbank, Old-rd., Holmfirth.

HIGH-CLASS Yorkshires, Wooler's strain, clears, cinnamons, marked or green marked, standard length, good position and feather, matched pairs to breed winners from 15/-; approval; satisfaction guaranteed; all letters answered.—Hardaker, Norwood-rd., Shipley.

FOR disposal, following long, slim, classical Yorkshires:—Yellow cock, 7 in., 12/6; two, 10/6 each; four buffs, 8/6 and 10/6 each; three buff hens, 7 in., 7/- each; two smaller, 5/- each; feather like wax, 1906 bred.—Mr. Dodgson, 40, Priestman-ter., Bradford, Yorkshire.

NOTICE.—Buy from the breeder. We still have a few pairs left at 8/-; selected matched pairs at 15/- and 20/-; some grand hens at 5/-, 6/-, 7/6; stock cocks, 10/6, 12/6; P.O. or deposit; approval. Fanciers, note new address; larger premises.—Y. Leach and Son, 41 and 42, Market-pl., Keighley, Yorkshire.

H. LINDSAY'S champion Yorkshires and Norwich Plainheads.—Having picked my own breeding stock, I have some grand birds for sale, same strain as my winners, cheap to clear, pairs, 15/-, 20/-; few grand buff cocks from 10/-; also good buff hens from 6/-; in breeding condition; inspection invited; stamp reply.—202, King James'-street, Sheffield.

THE old Yorkshire breeder's birds are best of quality, cold room bred, clears, ticked, yellows, or buffs, cocks, full song, 6/6, 8/6, 10/6; hens 3/6, 4/6, 5/6, 6/6; pairs, properly matched for breeding, 10/6, 12/6, 15/-; seven days' approval, cash or deposit.—Pickles, 5, Wardman-st., Keighley, Yorkshire. x268

CHAMPION Yorkshires.—Those requiring stock birds of the highest type and quality, I guarantee to please you. Four buff cocks, 12/-, 15/- each; also three yellow hens, two buff, 8/- each; all unflighted birds and related to my winners at all the leading shows. This is a chance that is seldom met with.—Willie Wadsworth, Skelmanthorpe, Huddersfield, Yorks.

MURGATROYD AND SON, breeders 21 years, runners up for Yorkshire Amalgamation 25 guineas challenge trophy, 1906, also winners Yorkshire Amalgamation challenge cup, 1905 and 1906. We have only a few pairs for disposal, cocks, long and stylish, hens, feathered to perfection. These are real bargains to clear; no rubbish; satisfaction guaranteed; four days' approval; stamp for particulars.—35, Lytton-rd., Girliugton, Bradford.

MESSRS. AMBLER'S Yorkshires are without doubt the purest strain in the Fancy. We offer for sale, buff cock, winner, and yellow hen, 63/-; three clinking pairs at 50/-; two pairs, 30/-; two, 20/-; three yellow cocks, 15/-, 20/-, and 30/-; four buff cocks, 15/-, 20/-, 30/, and 40/-; pairs cinnamon marks, 35/-; cinnamon marked cock, 20/-; 12 hens, yellow and buff, 10/-, 15/-, and 20/-; these are all perfect type, and feathered like wax, and the highest class Yorkshires; approval; stamp particulars.—17, Lytton-rd., Bradford.

IF you want Yorkshires to breed own winners, buy from the breeder who always gives satisfaction. Read the following, out of several last week:—"Percy-st., Rochdale. March 1st.—Bird arrived safely, and am well pleased with it.—Yours fraternally, S. M. Clayton."—"Weather-hill, Stanhope. February 27th.—Received bird all right, well satisfied, just what I wanted.—Yours truly, R. Hobbs."—Another customer writes: "Have sold eight birds for £8 from the 10/6 cock I had from you."—Long stylish cocks, full song, cold room bred and kept, 6/6, 7/6, 8/6, 10/6; hens, 3/6, 4/6, 5/6, 7/6; pairs, properly mated, 10/6, 12/6, 15/-; seven days' approval; stamp for reply.—W. H. Berry, Ingrow, Keighley.

TEN typical hens, yellow and buff, grand stock birds, bred by an exhibitor, 5/6; each a rare chance for the coming season.—Chris. Wren, China Stores, Merton High-st., South Wimbledon.

TWO buff Cinnamon Yorkshire cocks, length, quality, and style, 7/6 and 10/- each; approval; also clears, winners.—James Thomas, Bugle, Cornwall.

J. BURKE has some grand Yorkshires for disposal, winners at most local shows; inspection invited; approval, deposit.—72, Greenway-st., Small Heath, Birmingham.

EXQUISITE coloured plate of Cinnamon marked Yorkshires, pronounced by Mr. Battye to be ideal, sent, carefully packed, on receipt of a 6d. postal order.—F. Carl, 154, Fleet Street, London.

SOME grand Yorkshires for disposal, 7 in. stock cocks, fine hens, no reasonable offer refused; inspection invited.—Silverthorn, 85, Coldharbour-la., Camberwell. x268

YORKSHIRES for sale, bred from winning strain, about three pairs left; must sell to make room; price, stamp reply.—W. Andrews, 45, Rosebery-rd., Edmonton.

TWO clear yellow Yorkshire cock Canaries, tall and slim, and well bred young birds, 10/- each.—Robson, 3, Beech-grove, Blackhall Mill, Ebchester, Durham.

I HAVE still a few grand buff cocks, seven inches long, full of style and quality, best blood in the Fancy, and in the pink of health and condition, 10/-, 15/-, 20/-; approval.—Relieving Officer, Driffield.

LARGE clear buff Yorkshire cock, 12/6; ditto, 10/6; few grand buff hens, clear and marked, from 4/6; approval first.—Wallbank, 35, Withers-st., Blackburn.

FIFTY pairs of long typical Yorkshires, 7/6, 8/6 10/6, 15/6 pair; single birds, cocks, from 5/-; hens from 2/6; can be seen any time.—Marsh, Freemasons Arms, Mercer-on-st., Brady-st., Whitechapel-rd.

ABOUT 20 typical Yorkshires for sale; no reasonable offer refused; giving up; also cages, etc.; write for particulars, stating wants; satisfaction guaranteed.—W. Mullins, Balby-rd., Doncaster.

YORKSHIRES FOR STOCK,

from 8/- each; pairs, 15/-; bred from winners, Bailey and Swanger's blood.—Rev. C. Sales, Peterborough.

CHAMPION YORKSHIRES.

Have for sale some grand birds at reasonable prices, cocks from 6/6 to 15/-; hens from 5/- to 10/- each; only a few left, all healthy, cold room bred; approval, cash, deposit.—H. Buttke, Rawdon, Leeds.

SPENCE'S YORKSHIRE AND NORWICH.

Special value, cocks, from 5/6; hens from 3/6; pairs, 8/6, 10/6, 12/6, 15/-, 20/-, all colours; satisfaction guaranteed; seven days' approval, cash or deposit.—Spence, Breeder, Mount Pleasant, Norristhorpe, Liversedge, Yorks.

MUNDELL AND SON

Have for disposal some typical Yorkshire cocks from 15/-; hens from 7/6; feathered like wax.—6, Carlisle-pl., Bradford.

Satisfaction

If you require Yorkshire Canaries of the correct type, at reasonable prices, allow me to send you the birds you require, carriage paid, on seven days' approval. I have over one thousand birds to select from, including many winners and matched pairs for breeding winners. Light-feathered upstanding Yorkshire cocks, in full song, 6/6, 7/6, 8/6, 10/6, 12/6, 15/- each. Racy Yorkshire hens, 3/6, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6 each. Properly matched pairs, 8/6, 10/6, 12/6, 15/-, 17/6, 20/- per pair. A few winners at reasonable prices. Send me an order; it will convince you and your friends that I give the best value money can buy. All my customers receive satisfaction. "206, New Town, Stockport. Feb. 23rd, 1907. Bird arrived, carriage paid, with which I am very pleased. It is exactly the bird I required, for which accept my best thanks.—I. Clark to Miss Storey." "18, Lindsay-st., Bishop Auckland. Feb. 23rd, 1907. Bird to hand in the pink of condition; more than I expected at the low price. Thanking you for prompt attention, etc.—C. Stainshy to Miss Storey." "Les Caches, Guernsey. Feb. 22nd, 1907. I am perfectly satisfied with the bird you sent me. He is a splendid singer. This is the first time I have been so honestly treated. Again thanking you.—J. Collenette to Miss Storey." "2, Campton-st., Plaistow. Feb. 23rd, 1907. Received birds quite safe. I must say I am delighted with them; they arrived in splendid condition. I think it impossible to get such quality of birds elsewhere at the price. For all my future orders I shall certainly send to you.—E. Archer to Miss Storey." "18, Sengenydd-st., Treorchy. Feb. 23rd, 1907. Received Canaries safe, and must thank you for fair, honest, honourable dealing. Your mode of packing is indeed a treat. I think you are the most honest person to deal with.—J. Byard to Miss Storey." "Reigham Cottage, Alnwick. Feb. 22nd, 1907. Bird arrived safe, and gives every satisfaction. Your way of sending them does you great credit. I shall certainly speak of your straightforward and honest dealing.—R. Arele to Miss Storey." "14, Tees-st., Middlesbrough. Feb. 23rd, 1907. I am highly pleased with the Yorkshires you sent me, being extra good value for the money. The cock bird commenced singing on arrival. He is a beauty.—M. Manyham to Miss Story." "Nepsbury Cottage, St. Albans. Feb. 23rd, 1907. Received birds. They are quite satisfactory and very lively. Thanking you very much for such prompt attention and careful packing, etc.—J. Hill to Miss Storey." "101, Wellington-st., Milton. Received bird in grand condition. It is a perfect treat; exactly what I wanted. Thanks for your prompt attention.—R. Walker to Miss Storey." "131, Fair View, Haydock. Feb. 23rd, 1907. Bird arrived in best of health and good condition, for which I am very much obliged to you, for prompt businesslike treatment. It is good value for my money.—W. Youd to Miss Storey." I have hunderds of thousands of similar letters open for inspection. Remember I send birds, carriage paid, on seven days' approval, at my risk. New illustrated list free.—Miss E. L. Storey, Crowle, Doncaster.

POSTAL ORDERS PLEASE.

Owing to the new Post Office Regulations respecting the use of stamps upon Postal Orders, we are reluctantly compelled to state that in future our rule re **sending Postal Orders as far as possible instead of stamps** *must be strictly enforced. Advertisers unable to obtain Postal Orders must remit an extra halfpenny with every four penny stamps.*

OUR WELL-BELOVED COMPANIONS.

E. TAYLOR, BIRD SPECIALIST,

3 & 7, Thornton Road, BRADFORD.

It is a well-known fact that the name of **E. TAYLOR,** of Bradford, in connection with everything associated with either Bird Life or Cage Appliances, is at all times an admitted guarantee for excellence. The men who are not lovers of Birds are very similar to those who are not lovers of music; and, regarding the latter, Shakespeare has asserted "let no such man be trusted!"

Both the public, and the great active trading body of Dealers, are well and fully aware that, in connection with all Bird matters, they can trust **E. TAYLOR** implicitly and to the letter. They have **proved it,** for many a long year now, and having found their trust thoroughly well grounded, bestow their confidence on **E. TAYLOR** as ardently as ever. If this falls under the notice of one who may be a stranger to the benefits conferred by **E. TAYLOR** in his system of doing business, he is respectfully requested to carefully peruse my New Illustrated Catalogue, which will be sent post-free on application. The following are what I have in stock and for sale:—

Yorkshire Cocks.
Clear Yellow, 6/-, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, 25/-. Clear Buff, 6/-, 7/6, 10/-, 12/6, 15/-, 17/6, 20/-. Ticked or Variegated, 5/6, 7/6, 10/-, 12/6, 15/-, 20/-. Cinnamon Ticked, 6/6, 7/6, 10/-, 12/6, 15/-, 20/-

Yorkshire Hens.

TRAVELLING CAGES, with Food and Nourishment for the journey, 3d. EXTRA.

Please Note Recent Dates.

3, Douglas-st., Bloemfontein. Received March 2nd, 1907.—Just a line to let you know that the Canaries arrived safely, and seem none the worse for their long journey. Two of them are nesting. Thanking you for matching, as I am more than satisfied.—D. P. King to E. Taylor.

Carnac Bunder, Bombay, India. Received March 2nd, 1907. The last lot of birds arrived here in the best of condition; in fact, I could not have wished to see them better, and we were all pleased, and the others all wish me to convey their thanks for the birds sent out.—P. Hunter to E. Taylor.

82, Clayton-rd., Peckham, S.E. March 1st, 1907.—I am pleased to say birds arrived safe and sound on Saturday. My wife and myself are both very pleased with them, and think them lovely birds. The cock started to sing a little as soon as he arrived, and to-day he has been singing lovely. I shall send you another order for birds very shortly, as I am very pleased with what you have sent me.—J. H. Hazell to E. Taylor.

57, Front-st., Mossend, West Calder. March 1st, 1907.—Bird arrived on Wednesday morning in good condition, and started singing as soon as he was changed from travelling cage. I am quite pleased with him, thanking you for prompt attention and courteous treatment.—J. Whiteman to E. Taylor.

Millknowe, Campbeltown, Argyllshire. March 1st, 1907.—Received Hartz Mountain Rollers safe and in good condition. The cock sung while unpacking. I am very pleased with them. Many thanks for quick despatch and straightforward dealing.—D. Hall to E. Taylor.

The Duke of Portland's Poultry Yard, Welbeck, Worksop. March 2nd, 1907.—The Canaries arrived safe this morning, none the worse for their journey. They are four very nice pairs.—W. Bush to E. Taylor.

139, Prendergast, Haverfordwest. March 1st, 1907.—I received the cage and chain safely, and am highly pleased with both. I think it is a handsome cage for the very low price. Thanking you for quick despatch. Shall always recommend you in this district.—William Bevan to E. Taylor.

22, Reddish-vale, Stockport. March 1st, 1907.—Just a line to say I got the bird last Saturday, and it has done very well. Thanking you very much for your kindness in sending me a good one. I will assure you I will recommend you to anyone that wants a bird, as he has been praised very much.—M. Crofts to E. Taylor.

72, Belle Green-lane, Ince. March 2nd, 1907.—Now that the week's approval is up, I think it my duty to let you know that I am very well satisfied and pleased with them. The Norwich and Yorkshire are two splendid birds, and the German is a real treat. He is singing all the day over, and seems to go better. In fact, he is singing as I am writing.—G. Brindle to E. Taylor.

23, Park-rd., Leek, Staffs. March 3rd, 1907.—The birds arrived safe and well yesterday. I must say that I am well pleased with it. I thank you for your prompt dispatch, and advice on how to treat birds on arrival.—J. Brierley to E. Taylor.

6, Heaton-st., West End. March 2nd, 1907.—I received the bird I sent for in safety, and I write to thank you for the way in which you sent it off, and I am very well satisfied with it, and shall recommend you to my friends. Hoping you will have every success.—F. Needham to E. Taylor.

5, Hastings-pl., Darvel, Ayrshire, N.B. March 3rd, 1907.—Buff Norwich cock arrived all safe on Wednesday morning. I may say he is giving every satisfaction so far. He is a very nice bird.—J. Robertson to E. Taylor.

Golborne, Newton-le-Willows. March 2nd, 1907.—Bird arrived safe and well. I am highly delighted with it. It is a little champion for the money. Please send catalogue as soon as you can, as I may have further orders for you.—B. Hope to E. Taylor.

Clydebank. March 3rd, 1907.—Allow me to thank you for the pair of Canarics you sent me. They arrived all safe two hours after I received your post card to say you had sent them off the night before. I am very much pleased with them. I shall do my best to further your name as a straightforward man.—Robert Loy to E. Taylor.

139, Prendergast, Haverfordwest. March 2nd, 1907.—Received Yorkshire Canary safe, and am very pleased with it. Thanking you for quick despatch.—Wm. Bevan to E. Taylor.

45, Canterbury-grove, W. Norwood, London, S.E. March 2nd, 1907.—Pleased to say I received Seifert hen quite safe, and it gives every satisfaction.—A. B. Starek to E. Taylor.

16, Ridgefield-st., Castleford. February 28th, 1907.—Aviary received safe, and gives every satisfaction. Sorry you did not receive the full amount, I enclose you the other 5d. in stamps. I got a pair of Yorkshires from your Leeds branch on Saturday, and they are just like a picture. Shall strongly recommend you.—F. Welburn to E. Taylor.

Eynesbury, St. Neots, Hunts. February 28th, 1907.—The bird and drinkers safe to hand. I am very well satisfied with them. The hen is a beauty. Thanking you for the fair way you have dealt with me.—F. Sharman to E. Taylor.

Penley Hall, Ellesmere, Salop. February 28th, 1907.—The six birds arrived safely on Friday, the 14th. I am very much pleased with them all. The Crested cock is a very fine one, and the Hartz Rollers both sing well. They began soon after I put them into fresh cages. If I hear of anyone wanting good birds I will tell them of you, as I cousider them all good birds for their prices.—H. Cotton to E. Taylor.

Highfield House, Bowness-on-Solway. March 2nd, 1907.—I received the breeding cage all right, on Friday, March 1st, and am exceedingly pleased with it. The Canaries I got from you last year have turned out very successful, having had twelve birds from the first two and four from the green hen. I am sure one of the young Yorkshire cocks would get a prize, it is such a beauty. I consider you have treated me very well, and if I do get the Crested birds this year, it will most certainly be from you.—Mrs. John Holmes to E. Taylor.

11, Ashburnham-rd., Kensal Rise, Willesden, London, N.W. February 28th, 1907.—Received pair of birds No. 21620 in perfect and satisfactory condition. I am decidedly pleased with them, and hope to do some good this summer with same. Wishing you the best of success with your cage birds.—A. T. Bunker to E. Taylor.

14, Ram-sq., High-st., Wandsworth, London. February 28th, 1907.—Just a line to say that the bird you sent arrived safe, and that I am quite satisfied with it. You could not have served me better. It is worth double the money.—E. Randell to E. Taylor.

Brampton. February 28th, 1907.—I write to thank you for the straighttorwardness in which you have dealt with us with the club. All the members are well satisfied with the birds, all but one, and it has turned out to be a hen. I stated at first that a lot of the members lived a long way from me, and this is one of them. I did not get to know about it until last week, so I thought I would let you know about it, for all the others are clippers, and some have got eggs already.—W. Newman to E. Taylor.

New Buildings, Rise Carr, Darlington. February 28th, 1907.—I am very pleased I received the bird this morning. I am highly satisfied with it. I will be giving you another order later o... I will recommend you to all my friends as being a straightforward dealer.—R. Reese to E. Taylor.

116, Hall-st., Rhos, near Ruabon. February 28th, 1907.—I have heard many a one praising your birds . . . . . he would not wish to have any better ones. He has had a couple off you, and if you will send me as good a Mule as you sent him a Canary, I will be satisfied.—Thomas Smith to E. Taylor.

Higham Hall, Nuneaton. February 28th, 1907.—Goldfinch arrived safe, and am very pleased with it. He is a smart bird, and seems none the worse for his journey.—E. Horspool to E. Taylor.

21, Oxford-st., Rugby, Warwickshire. February 27th, 1907.—The dark Mule you sent me a few weeks ago is giving great satisfaction; he whistles a treat.—W. H. Dickens to E. Taylor.

29, Mount-rd., Montrose. March 2nd, 1907.—I am more than pleased with the fine birds you have sent me, and also for your promptness in executing my wishes. The birds, so far, are nice and lively, and have stood the cold journey well. I followed your instructions as to warmth and feeding, so I think they will be all right. I shall certainly inform my friends who are interested in birds, etc., and I hope that you may get some orders.—Captain F. E. Cranhe, R.N., to E. Taylor.

Shankbridge, Ballymena. February 27th, 1907. Birds arrived here on Wednesday in good order. I am well pleased with both colour and appearance. Cock started singing the following morning. Thanking you for prompt attention.—Robert Hill to E. Taylor.

Hillside-ter., Thornliebank. February 27th, 1907.—Allow me to thank you for Goldie you sent me. I am perfectly satisfied with the bird, and very pleased with the same.—H. Mathieson to E. Taylor.

42, Arthur-rd, Fleetville, St. Albans, Herts. March 2nd, 1907.—Re the Canaries. I am perfectly satisfied with them; they are splendid birds. Thanking you for your prompt attention.—W. Badham to E. Taylor.

Longreach, Keynsham, Somerset. March 2nd, 1907.—I am writing to thank you for birds, all of which arrived safely yesterday morning. The cages came this morning. I am very pleased with everything.—A. M. Tollemache to E. Taylor.

40, Pultency-rd., South Woodford. March 22nd, 1907.—I am very satisfied with the birds you sent on approval. They seem quite at home, and are singing very nicely. If I require any more I shall most certainly send to you.—E. G. Brent to E. Taylor.

St. Dunstan's-alley, Great Tower-st., London, E.C. March 22nd, 1907.—The pair of Crests you sent me have now settled down in their new surroundings, and I have very much pleasure in stating they give me entire satisfaction. They are a pair of very fine birds, and sterling value. They are honestly worth the £4.—J. W. Cook to E. Taylor.

36, Newton-rd., Hoylake. March 2nd, 1907.—I received the Yorkshire cock safe to hand week today, in good condition. Thanks for your promptness, and also good packing. Well, the bird is unsurpassable in quality and value. Also in singing. He sings all day long. Many of my friends have been quite taken up with his sweet voice, and want to buy it, but I would not part with it for treble what I paid for it. You can expect more orders very soon, also you can make use of this in any way you like.—H. G. Jones to E. Taylor.

In addition to the above testimonials I have sent the Editor of "CAGE BIRDS" several hundred recently received.

3 GOOD REMEDIES.

Songsterdyne.
An absolute cure for **Colds, Wheezing,** and **Asthma** in all Cage Birds. It supersedes all other known remedies in being at once safe, simple, efficacious, and inexpensive.
7d., 1s., and 3s. per Bottle, post free.

Canary Tonic Drops.
Are specially useful for **Weakness, Sweating on the Nest,** and **Drooping in the Moulting Season.** If given in the drinking cup once or twice a week for breeding birds, it will keep them in a high order of health. It will be found particularly useful during the show season in keeping exhibition birds in condition.
7d., 1s., and 3s. per Bottle, post free.

Soft Moult Cure.
The only remedy before the Fancy for this disease alone. A few drops in their drinking water will cure the most severe case.
7d., 1s., and 3s. per Bottle, post free.

Full detailed Price List sent post free on application, but if you want my large Descriptive 104-page Catalogue of Cages, Aviaries and all Bird-room Requisites, send Two Stamps to cover postage.

Arthur Thompson,
197, Bradford Rd., Frizinghall, BRADFORD.

SAMUEL DEAN, 24, Crossley Street, Gt. Horton, Bradford, Breeder and Exhibitor of high-class Yorkshire Canaries, including Greens x259

WORKING MEN!
Breed your own winners; last opportunity; no fancy price; three champion matched pairs, 15/- pair to clear; approval.—Samuel Russell, Steeton, Keighley.

LAST OPPORTUNITY IN YORKSHIRES.
Have four hens and three cocks, any price you like just to clear out of the way.—R. Philpot, The Garth, South Hill, Guildford.

H. E. TRINGHAM
Has for disposal a few stock pairs, quality right, and prices reasonable; write or call evenings, Saturdays or Sundays.—Old Barge House Wharf, Commercial-rd., Blackfriars.

E. F. Gowing's Crystal Palace Prize Strain.
Well-matched pairs, 25s., 35s., 45s.; some grand hens, 7s. 6d., 10s., 15s.; all related to my winners of firsts, specials, and other awards at Palace Shows, in open classes. Not showing this season. No reserve; approval with pleasure.—28, Castle-rd., Colchester.

LAWRENCE LANE
has some long slim stylish Yorkshires to part with, feathered like wax, related to my winners at Burnley, Rochdale, Wigan, Great Harwood, Ormskirk, etc.; pairs, matched to breed winners, 15/-; single cocks, 10/6 each, cold room; approval; satisfaction guaranteed or money returned in full.—16, Fountain-st., Barnoldswick, Yorkshire. x268

COWGILL'S YORKSHIRES.
Birds that I have sold have won over 40 1st prizes this season in the keenest of competition, which is proof of their quality. I have still some good ones for sale, for show, or stock; matched pairs from 15s. to 50s., cocks from 8s., hens from 7s.; approval; cash or deposit; stamp reply.—115, Washington Street, Girlington, Bradford.

THE CHAMPION WINNING STRAIN.
Winner of the Championship Diploma, Crystal Palace, 1906. Having about 60 pairs, we have decided to clear them out for a speedy clearance at 15s. to 20s. per pair, cocks standard length, hens feathered like box, sure to give satisfaction; seven days' approval, P.O. or deposit; stamp reply.—Gill and Pickup, 1, Cragg Street, Great Horton, Bradford. x268

KNIGHT'S YORKSHIRE AVIARIES.
Desiring to clear by end of month all my high-class Yorkshires (except our selected breeders), I offer 70 pairs properly matched, unrelated, at 12/6, 15/-, 20/-, 25/-, to 30/-; single cocks and hens proportionate; all cold-room bred, reared, and kept; all approval, cash or deposit. Few exhibition specimens from 20/-, 30/-, and 40/- each. Before purchasing elsewhere send 2d. in stamps for my newly published booklet, "The Whole Art of Colour Feeding and Training Yorkshire Canaries." Remember old address, Jonas Knight (author of "The Yorkshire Canary: Its Breeding and Management," published by "Feathered World," 1897), Allerton, Bradford, Yorkshire.

BENNETT'S
Champion Yorkshires, highest awards, ten guinea challenge and other cups, Palace, etc.; finest strain in the world; few properly-matched pairs cheap, same blood as those supplied by me to England's most successful exhibitors of Yorkshire Canaries; price list free.—59, Waverley Road, Great Horton, Bradford.

WILCOCK'S YORKSHIRES, NORWICH.
I can supply you with either Yorkshires or Norwich Plainheads, for either stock or the show bench, all bred from my winners at all the leading shows, no better blood in the Fancy, pairs from 12s. 6d., 15s., 20s., 30s.; cocks or hens, from 7s. 6d., 10s. 6d., 15s., 20s. each; 3 days' approval.—14, Chapel Street, Eccleshill, Bradford, Yorkshire.

WINNERS CHAMPIONSHIP.
I earnestly ask you for trial order to prove I give satisfaction; sent on week's approval at my own risk, cash or deposit. I claim to have best collection in West England, and sold some most prominent on show bench, which wins challenge cup and medals; this strain winners 200 prizes; Yorkshire cocks, standard length, feather like wax, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-; hens 3/6, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6, 12/6; clears or ticked pairs 8/6, 10/6, 12/6, 15/-, 20/-; Sib bred cocks or hens, for light muling, same price.—C. Baker, Herbert-st., Bedminster.

CHAMPION YORKSHIRES.
Fine typical birds, ticked and clears, all clean moulted and colour fed; buff Yorkshire cocks at 6/- and upwards; yellow cocks 7/6 upwards, all on song; hens, 4/6, 5/6, pairs 10/6 upwards.—A. Smith, East Morton, nr. Bingley, Yorks. x263

Yorkshires

W. RUDD, The Bird Specialist,
NORWICH.

Hudson's Champion Yorkshires
are what you want to breed your own winners. Bred from or related to winners. Few green marked, Cinnamon marked, and clears, in matched pairs, at 10/6, 12/6, 15/-, 17/6 per pair; single cocks, for stock or song, at 7/6, 8/6, 10/6; hens, yellow and buff, 5/6, 6/6, 7/6; all cold-room bred and kept, ready for breeding. Remember my terms, four days' approval; stamp reply.—Hudson, Confectioner, Thackley, Bradford.

Bailey and Swanger's Yorkshires
have once more taken the very highest honours at the Crystal Palace, winning championship best bird, also champion diploma best bird, also medal best bird; in addition, we have won the Y.C.C. £21 cup, against all comers two years running; what better proof of our stock, and every bird our own strain. Our motto is quality, not quantity. Send stamp for prices and particulars.—24, Sandy-la., Allerton, Bradford.

AMBLER'S CHAMPION YORKSHIRES.
The finest strain in the world. A few winners for sale, also choice stock birds, cocks and hens, perfect type, and feathered like box, and the highest possible breed, same as our winners, 5 1sts, 4 specials, 3 2nds, 3rd, and 4th, Leeds and Manchester. Birds we sold this last season won over 300 money prizes; satisfaction guaranteed; stamp particulars.—17, Lytton-rd., Bradford.

CHAMPION YORKSHIRES.
SPECIAL Notice.—Write or call at any time and see my splendid lot of long, slim, straight, upstanding Yorkshires; every bird in the primest condition, with plumage like silk; every cock warranted singing; all cold room bred and kept. I have them in all colours except Greens, and all on seven days' approval; cash or deposit; Yellow cocks, orange-yellow, 8s. 6d., 9s. 6d., 10s. 6d.; Buffs, cocks, 7s. 6d., 8s. 6d., 10s. 6d.; Orange-Yellow hens, 4s. 6d., 5s., 5s. 6d.; Buff hens, 3s. 6d., 4s., 4s. 6d.; inspection invited.—Shaw, 97, Essex Road, Islington, London,

AMALGAMATED YORKSHIRE SOCIETIES.

Address—**Heaton View, Cragg Road, Windhill**
SHIPLEY.

Extraordinary Value.

GRAND TYPICAL YORKSHIRES,
From 15/6 per pair upwards.
Single Birds supplied, all on approval.

EVIDENCE OF QUALITY.

"17, Ford-lane, Crewe. February 15th, 1907. I am pleased to say that I received Third Prize and V.H.C. in keen competition against such birds catalogued at £25 and £30 each with the two Yorkshire Hens you supplied me a few days ago. I am highly delighted with them, and I cannot say too much in your praise for the straightforward dealings and the quality of your birds.—Yours truly, J. Southam to Mackley Bros."

All Fanciers should write for our Catalogue, sent post free.

Postal and Telegraphic address—
MACKLEY BROS., NORWICH

IMPORTANT
TO ALL
FOREIGN
AND OTHER
BUYERS
OF
HIGH-CLASS BIRDS.

NOTE.—Out of Two Shipments of Canaries, consisting of Norwich Plainheads, Crests, Cinnamons, Yorkshires, Lancashires, and Hartz Mountain Rollers, only one bird arrived dead.

Distance from Norwich to destination, Thirteen thousand eight hundred and fifty six miles.

Read following testimonials:

Glenforsa, Nelson, **NEW ZEALAND,** January 21st. 1907.—Just a few lines to let you know the **two shipments** of Canaries arrived in Nelson in **very good condition and feather** and with only **one** death. My friends are very pleased with the shipment and the quality of the Canaries, and consider that they have received **a very useful lot of birds, and good value for their outlay.**—G. A. Macquarrie to W. Rudd.

Another Irish appreciation.
Sunnyside, Rochestown, Co. Cork. February 28th, 1907.—The birds arrived safe and sound yesterday. I am delighted with them. I shall do my best about here to souud your name.—A. E. Doyle to W. Rudd.

Cannot get better served anywhere else.
Corinium, Clarence-sq., Cheltenham. March 4th.—The pair of Rollers arrived safe. I am very pleased with them. I may say I bought my first birds from you, and feel I cannot get better served anywhere else.—E. S. Parker to W. Rudd.

14, Darwin-st., Old Kent-rd., London, S.E. February 25th, 1907.—I received birds safe. I am highly pleased, and the birds give every satisfaction. I have given the birds a good trial, so I do not speak hastily.—E. M. Hoffler to W. Rudd.

20, Church-st., Huntley. February 28th, 1907.—The birds arrived safe and well after their long journey. I am very pleased with them, and consider them rare value for money.—W. D. Lamb to W. Rudd.

Battersea, London. February 27th, 1907.—Yorkshire songster arrived safely. Delighted with bim. He is a beauty.—J. H. Hole to W. Rudd.

Best in the Market.
53, Second-av., Mortlake. February 26th, 1907.—Please send a bottle of Asthmarine. I have a hen wheezing, and I find it the best remedy in the market.—W. Clarke to W. Rudd.

Good Value for Money.
59, Browning-rd., Enfield, London, N. February 26th, 1907.—I received the buff Yorkshire cock quite safe. I am very well pleased. It is good value for the money. I will do my best to recommend you.—W. J. Pike to W. Rudd.

Never, etc.
82 and 84, Stansted-rd., Southsea. February 25th, 1907.—I must thauk you very much for sending me such a nice bird for the money. He is a champion. I have bought birds elsewhere, but never had one to come up to this at the price.—T. J. Bach to W. Rudd.

Always know where to write if wanting good birds.
30, Holdenby-rd., Crofton Park, London, S.E. March 1st, 1907.—Birds arrived, and none the worse for journey. I am pleased with them, and shall always know where to write if I want good birds.—P. H. Snelling to W. Rudd.

Bucknall. March 1st, 1907.—I received birds, and they are in perfect condition. The cock was singing three-quarters of an hour after I received them. I am satisfied with them.—Geo. Pickerill to W. Rudd.

Mace Farm, Cudham, Kent. February 25th, 1907.—I have received the two pairs of birds quite safe. I am pleased with them. Had I have chosen them myself I could not have picked better. I am pleased with your straightforward business methods, and I wish you every success.—T. Loveday to W. Rudd.

39, Prestwick-rd., Ayr. February 28th, 1907.—The birds arrived safely, in good condition. I am highly pleased with them, and will recommend you to my friends.—J. Brown to W. Rudd.

Still another recommendation.
Milend, Gendros, near Swansea. February 27th, 1907.—I received the birds safe, and in grand condition. I shall be sending for some more shortly. Shall still recommend you to my friends.—T. Elliott to W. Rudd.

The very kind wanted.
21, Medway-st., Hirst, Ashington, Morpeth. March 1st, 1907.—Bird arrived safe, and I am fully satisfied with it. It is the very kind I wanted.—L. Hall to W. Rudd.

Highly satisfied.
90, Hasting-st., Sunderland. March 2nd, 1907.—Received the birds this morning in the pink of condition. I am very highly satisfied with them. They are two lovely birds for the money. I am also pleased with quick and prompt delivery. I was surprised to get them so soon.—J. A. Forbes to W. Rudd.

Poplar, London. February 28th, 1907.—The Goldfinch came safe to band. I am well satisfied.—D. West to W. Rudd.

NOTE.—All Amateurs should try my Special Matched Pairs of Prize-bred Norwich Plainheads at 10/6, 12/6, 15/-, and 20/-. Crested ditto, 15/-, 20/-, 25/- and 30/-. Yorkshires, 12/6, 15/-, 20/-. These are the *Best Value* ever offered.

Travelling Cages, 3d. extra.

CLUB REPORTS.

GLASGOW AND WEST OF SCOTLAND N.M.B. AND F.B.C.

We held our Pairs Show on February 26th, and had a splendid entry, 99 pairs being staged in six classes. Judges: Canaries, Mr. John Ferguson; A.O.V., Mr. Sam Ward. The judging was good throughout, and gave great satisfaction. Over 100 visitors inspected the birds. Next meeting, Tuesday, March 12th. Business: Proposed open show.—R.A. Brown, Hon. Sec.

BARNSLEY AND DIS. C.B.S.

Meeting held March 2nd. Half a dozen new members were enrolled, and officers elected:—Sec., T. Coward, 22, Blenheim Road, Barnsley; Assist. Sec., J. J. Whittaker, Church-hill, Royston; Treas., Mr. Green, Lower Borough. The Secretary was instructed to arrange with some gentleman to give a lecture on "Breeding," at the Maltsters' Rest, on March 16th, at 6.30 prompt. All fanciers in the district, members or not, are invited to be present. —T. Coward.

METROPOLITAN ASSOCIATION OF C.M.H.B.F.

Meeting on Thursday last. After the medals awarded for the judging competition had been distributed, it was announced that Mr. C. A. House would give a lecture at the next meeting on the Rearing of Young Birds. Messrs. Cooper Bros., F. Rides, R. Brownlie, G. Hartley, E. Blum, H. Gray, W. Sawyer, F. S. Matthes, E. Wilcox, Mrs. Tindall, Mrs. Gill, and Mrs. Peck were elected members; and Messrs. W. E. Halls, W. E. Burgess, Mrs. Coles, and Mrs. McGregor were nominated. Mr. F. J. Martin gave an exhibition of washing and staging birds for exhibition, after he had washed two, Mr. G. Kearney put two through for us. The meeting was honoured by the presence of our President, J. Tindall, Esq., who also put one through the laundry process in a very creditable manner. Several of the novice members also tried their hand.—A. J. Head, Hon. Sec.

CAMBRIDGE C.B.S. ANNUAL DINNER.

The annual dinner of the Cambridge and Cambridgeshire C.B.S. was held on February 27th, at headquarters, the Black Swan, Guildhall-street, when between 40 and 50 members and friends sat down to an exeellent repast, provided by Host A. Bellatti. Mr. A. E. Brooks occupied the chair, and Mr. R. C. Bateman the vice-chair. The evening was spent in conviviality, interspersed with a few short speeches.—In proposing the toast of "The Cage Bird Society," Mr. F. Doggett referred to the recent open show of the society, and complimented the committee on its success. He hoped that next year there would be a more extensive classification for British birds, and said that in this connection he would be pleased to guarantee one class at the forthcoming show, an offer which was received with applause.—Mr. A. E. Brooks and Mr. T. S. Moore replied. Mr. Moore spoke of the success of the society, both from show and financial points of view. At the Corn Exchange last November there were over 500 cage birds on view, 200 more than any previous entry, and it was hoped to still further improve on this and make the Cambridge show one of the largest in England. He appealed to local fanciers to assist the committee to accomplish this desirable end, which was quite within their power. —Mr. R. C. Bateman proposed "The Visitors," thanking them for their presence that evening.—Mr. Havelock Clarke and Mr. Marlleet briefly replied.—The musical programme was contributed to by Messrs. Fell, Moore, Saggers, Green, R. Witt, Havelock Clarke, Bannister, Garnham, and Dooner, and Mr. Whale ably presided at the piano.

POTTERIES C.B.A.

Meeting held at headquarters March 2nd. Young stock show fixed for June 29th, and the annual show November 7th. Two new members elected.—J. Simcock, Sec.

DALKEITH CANARY CLUB.

Meeting held on March 2nd, W. B. Smart, Esq., President, in the chair. The revised rules were gone into, and ordered to be printed for next meeting. It was decided to give medals for Scotch Fancies, Borders, and Norwich, at the annual club show.—Thos. Briggs, Sec.

CITY OF NORWICH C.B.S.

Judging competition at the Railway Stores, February 27th, for pairs of Plainheads matched for breeding. The members judged these first, then Messrs. J. Calver and J. Howard gave their final decision. No less than ten members were correct with the judges' decision. Mr. Bake's pair, 1st; Mr. Staff, 2nd; Mr. Lawrence, 3rd. On Monday next the competition will be for Norwich yellow hen, buff hen, and pairs of Crests matched for breeding.—W. Curl, Sec.

WELSH CAGE BIRD CLUB.

It has been decided to hold our annual meeting at Merthyr on Easter Tuesday, that day being considered the best to ensure a good gathering. Merthyr is also about the most central town, and has every convenience as far as train service is concerned. It is intended to present the medals, also the cash specials, to those fortunate enough to win them. It is the desire of the committee that those with propositions or other business to bring on will communicate with me at once. Unless such is done, it cannot be entertained upon the day of holding the meeting. The latest date I can receive such correspondence will be March 22nd. With the Editor's permission the agenda will appear in this paper on the 29th. This will prove the best year of the club, financially and otherwise. The subscription for 1907 is now due. Look out for announcement of meeting. It will be held at our Treasurer's, Mr. J. H. Jones, Ship and Bell, Plymouth-st.—D. H. Tedstone, Sec.

LEEDS C.B.S.

Monthly meeting, March 2nd, at Lockhart's, Briggate, Mr. Cobb in the chair. Five new members enrolled. Show of pairs, Yorkshire, Norwich, A.O.V., and Hybrid or muling pairs. Mr. Cobb placed the cards to general satisfaction. Yorkshire: 1, 2, Hall; 3, Ramsden. Norwich: 1, Stead; 2, Stephenson. A.O.V.: 1, 3, Yelland; 2, Stead. Hybrid or muling: 1 and 2, Love; 3, Stephenson. During the evening President, Vice-President, and Secretary of the Leeds Roller Club looked in, and arrangements were made to hold a joint committee meeting on Saturday, March 16th, at our headquarters, 7.30 (committee, please not), to consider the question of amalgamating the two societies' shows. An interesting syllabus for the year has been drawn up, and will be in the hands of all members in the course of a day or two. We also hope to hold a social evening on Friday, April 19th. Tickets will be about 1/6. All members who intend being present (non-members also welcome), please send in their names in good time to the Secretaries, Stephenson and Hornby.

AMALGAMATED YORKSHIRE O.S.

The adjourned Annual Meeting held at the Market Tavern, Bradford, on Monday evening, March 4th. Mr. Townend, president, occupied the chair. In the case of two partners having won one 1st prize in the novice classes under Yorkshire Union rules, since which time the partnership has been dissolved and one of the partners is no longer a member of any society in the amalgamation, it was decided that the remaining partner's claim for medal could not be entertained. The Secretary was instructed to purchase medals for other registered winners of one of two 1sts in the novice classes under the Yorkshire Union system, who have made application for them, and forward same when completed. It was agreed that the name of the "H. W. Naylor Challenge Cup" should be engraved thereon, and other necessary alterations made. A resolution that the Amalgamation challenge trophy, the H. W. Naylor challenge cup, case of water tins and 5,000 cage labels be handed over to the new Yorkshire Union of Cage Bird Societies was carried unanimously. The books and correspondence of the Amalgamation were left in the custody of the present secretary, to be destroyed after the lapse of a reasonable time. Any balance of funds remaining after paying all liabilities will be turned over to the "Secretary's Testimonial Fund," which is to remain open until the end of March, and the presentation will be made at a smoking concert to be held at the Market Tavern, on Saturday, April 6th. A hearty vote of thanks to and an expression of implicit confidence in the retiring officers brought the meeting, and the existence of the Amalgamated O.S., to a close. Success to the new Yorkshire Union of Cage Bird Societies.—Fred Hammond.

GREEN CANARY ASSOCIATION.

Now that the Palace Show is over, the competition for specials for season 1906-7 is concluded. The £15 15/- cup has caused a ding-dong fight, resulting in a final verdict for Mr. Ryno by one point, so that he, by winning the cup two years in succession, retains possession for all time. The results are as follows:—Cup and Medals:—T. Ryno, 116; W. Thompson, 115; Clayton, 72; Walker, 56; Hughes, 43; Gill and Pickup, 43; R. Davies, 43; Metcalfe, 25; Wardale, 24; Doughty, 20; Hellewell, 19; W. Jenkins, 15; Hadwin, 11; Jennings, 11; Rowlands, 7; Naylor, 6; Dixon, 6; G. Bell, 5; Mrs. Sunderland, 3. Yorks. Champ.:—W. Thompson, 161; Clayton, 121; Hughes, 82; Ryno, 62; Walker, 45; Gill and Pickup (divided), 69; Wardale, 39; Doughty, 32; Hellewell, 32; Jennings, 23; Hadwin, 19; Rowlands, 13; Dixon, 10; G. Bell, 7; D. Bell, 2; Rimmer, 1. Yorks. Novice:—Martin, 70; Deacon, 64; Benson, 34; Handley, 20; Drinkwater, 11; Carswell, 7; Stewart, 6; Haworth, 2; Davie, 1; Harrison, 1. Novice Medals:—Martin, 37; Deacon, 32; Benson, 18; Handley, 12; Stewart, 11; Drinkwater, 5; Carswell, 5; Harrison, 5; H. Abbott, 1. Norwich Champ.:—Ryno, 268; W. Thompson, 244; R. Davies, 78; Walker, 64; Metcalfe, 57; Jenkins, 30; Naylor, 11; Hadwin, 8; Mrs. Sunderland, 6; Wardale, 5; Hellewell, 3. Norwich Novice:—Stewart, 10; Harrison, 9; Daniels, 4; H. Abbott, 3; Andrews, 2.—Will members please check above figures, and write Secretary in case of dispute before March 18th. The prizes will be presented to successful competitors at the Liverpool Fanciers' Dinner, on March 21st. Tickets, 2/6 each, including ladies. —S. Hadwin, Sec., 28, Pembroke-place, Liverpool.

SINGING CONTESTS.

SKININGROVE AND LOFTUS.

Usual week-end contest, when fourteen birds sang at the Club Room, Timms Coffee House, Skiningrove. Some splendid singing was heard. 1st, W. Womack; 2nd, M. Dobson; 3rd, Calvert. F. Deadon, judge.—M. Dobson, Sec.

NEWTOWN, LEEDS.

Week-end contest at the Prince Albert Inn, Feb 24th. There were three good prizes. Eighteen picked birds competed. Judges: S. Green and B. Jackson. 1st, 2nd, and 3rd, H. Allen. Also contest March 3rd, when 12 birds competed. Judges: J. Binner and S. Green. 1st, H. Allen; 2nd, F. Allen; 3rd; W. Dean.—E. Wood, Hon. Sec.

HINDERWELL.

An open Linnet Singing Contest was held at Commercial Hotel, Hinderwell, on March the 2nd, when 20 birds were put up to sing time singing. F. Canby judged. 1st and 2nd, M. Dobson; 3rd, C. Rawson; 4th and 5th, M. Dobson. A show was held in connection with the above, when Mr. Hutchinson, of Whitby, judged. 1st M. Dobson, Linnet; 2nd, C. Rawson, Linnet; 3rd, Cuthbert, Linnet; 4th, Nodd, Goldfinch. Dobson and Hutchinson, time-keepers.

BARNSLEY.

Barnsley and District Skylark Singing Society held their first contest on March 2nd. There was some fair singing, and many were present to hear it. A fair number of birds turned up for the first time this year; there was a prize for every three birds entered. Winners and times in five minutes hanging:—George Allott, 4.40; Herrod, 4.35; Scamp, 4.7; Coles, 2.20; Coles, 2.2. The contest was held at Lonear Inn, Race-common-road. The headquarters of the society are at Cherry Tree Inn, Copper-street, Barnsley.—W. French, Sec.

LINNETS AT THE "OLD BIRD HOUSE" LEEDS.

A special quality Linnet singing contest took place on March 2nd, and will be continued every Saturday until further notice. Eleven picked birds competed for three good prizes. The birds were in good condition and gave a good account of themselves, to the satisfaction of all present. Result:—1st prize, C. Whitaker; 2nd, J. Clark; 3rd, Sam Hardcastle. There was also the usual week-end contest on Sunday, 16 birds competing for three good prizes. Result:—1st prize, C. Whitaker; 2nd, T. Stead; 3rd, shared by T. Stead and A. Pearson. Judges in both contests, J. Melia and W. Naylor. The winner is a marvellous Linnet, and cannot be spoken of too highly.—J. Melia and T. Stead, Secs.

LINNETS AT SHEFFIELD.

A great Linnet singing contest took place at the Don Inn, Dunlop Street, Sheffield, when the large company present were delighted with some real good singing, and loudly applauded the winners. The judges were J. Bollington and J. Blackadder. Twenty-eight birds competed, only two minutes being allowed owing to the large entry. Mr. Watson, whose bird had won nine firsts in succession, was looked upon as a sure winner again; but, to the delight of all present, Mr. H. Allen, who had journeyed from Leeds, entered his bird, and met Mr. Watson in the sixth heat, and after a great battle was victorious by nine points. Mr. H. Allen won the first prize, scoring 57 in two minutes, Mr. Watson being second, scoring 48, and third, scoring 32. Mr. Watson congratulated Mr. Allen on his success, and Mr. Allen thanked Mr. Watson, the landlord, Mr. Kay, and all present for the friendly way in which he had been received after travelling thirty-nine miles from Leeds, it being his first visit, but he hoped it would not be his last.—W. Reynolds.

The most serviceable, striking, yet tasteful and economical

LIVE BIRD LABELS

are those obtainable from "Cage Birds."

For the convenience of readers we have had printed a quantity of address labels suitable for use when despatching live birds on journeys by rail, etc. These are printed in red ink, on paper gummed at back, and

If more than 1-inch in an issue is required the charge will be **6s.** per inch and *pro rata* except to "Guaranteed" Shows appearing in our Dates Fixed column, which are charged at **5s.** per inch and *pro rata*.

SHOW ADVERTISEMENTS across two or more columns 7/6 per inch, column width, except to "Guaranteed" Shows, for which the charge is 6/- per inch, column width.

Secretaries desirous of "guaranteeing" a Show should apply for proper guarantee form to our Manager.

A reduction will be made for a Series of not less than Nine Weeks.

"CAGE BIRDS,"

154, FLEET STREET, LONDON, E.C.

Advertisements of shows entirely confined to members or limited to a radius not exceeding 20 miles will in future be inserted at 4s. per inch, *prepaid*, but it must be clearly stated at time of ordering if the show is a confined one, and, if limited in radius, what the limitation is.

DON'T FORGET!!!

LLANDUDNO FIRST ANNUAL EASTER SHOW of Pigeons, Cage Birds, etc., (under C.B.U. Rules). **Good Classification. Prize Money Guaranteed, Numerous Specials.**

Full particulars and Schedules, from W. YATES GREGORY, Queen's Road, Llandudno.

CLEATOR MOOR Fanciers' Society. Grand Show of Bantams Pigeons, and Cage Birds, will be held on **Sat., Nov. 2nd, 1907.** Popular judges all round—Cage Birds (British) O. Houlton, (Canaries) A. Hirst. Secretaries please note and do not clash with above Society.—J. E. Byrne, hon. sec.

I think the "Bird World Magazine" for March, just received, the best number yet.—SYDNEY L. COCKS (Peterborough).

The "Bird World Magazines" are instructive as well as good picture books, and are well worth binding.—H. MANSIRE (Thame).

Glossop Fanciers should note that a meeting of Cage Bird men is called for March 12, next (vide, "Club Notice" column).

I should like to mention I have sold some hundreds of birds through the medium CAGE BIRDS.—W. J. BANKS, Brockley.

Your ANNUAL has come to hand, and I think it is well worth a "bob."—J. M. NICHOLSON, Hon. Sec., Seaham Harbour and District C.B.A.

I had quite a number of replies about the terrier, and could not answer all. I wish CAGE BIRDS every success.—M.H. (Loughborough).

The judges engaged for Blaydon-on-Tyne Annual Show on Nov. 1st and 2nd next, are Messrs. J. Robson and J. Trengove.—D. A. OGILVIE, Sec.

The Crystal Palace No. was tip top, and the coloured plate is simply lovely. I wish you all the success you desire for CAGE BIRDS.—J. H. HICKS (Holsworthy).

In our report of the British Roller Club's meeting at the Palace Show, the name of Mr. C. TOWES (Hon. Sec., Leeds R.C.C.) was inadvertently given as Lowes.

Fanciers in the Cardiff district should make a note of the Cardiff C.B.S. Concert, to be given in the Lesser Cory Hall on Thursday, March 28th, commence at 8 p.m.

Mr A. E. Bailey (Bristol) informs us that he is shortly leaving England for Canada, where however, he hopes still to keep in the Fancy with whatever birds are popular over there.

It may interest readers to know that breeding operations are in full swing here. I have a nest of four young and three nests with eggs.—C. HALLETT (Lyme Regis, Dorset).

Stoke Newington F.A. has arranged a lantern lecture for Wednesday, March 13th, in the schoolroom of the Devonshire-square Church, Stoke Newington-road, to commence at 8 p.m.

We hear that the National British Bird and Mule Club is to hold its annual dinner on Thursday evening, March 21st, at the Holborn Restaurant, when it is hoped there will be a big muster of bird-lovers.

Mr. W. Hodson, Sec. Dulwich and Peckham C.B.S., writes: CAGE BIRDS ANNUAL received yesterday. It is indeed a wonderful sixpenny worth. Brimful of information from cover to cover. No fancier should be without it.

The Oldham and District Temperance C.B.S. has been broken up, a local correspondent informs us, and the cup returned to the donor, Mr. Brown (of steeplejack fame). The effects have been handed over to the Oldham and District Society.

Mr. J. E. Brown, secretary of Tamworth C.B.S., writes:—I consider the coloured plate of 23rd Feb. superb, worthy of the strongest comments of praise. It is a grand study for novices on type and points for show purposes of the Norwich Canary."

The replies to my advert. are so numerous that I cannot possibly attend to them all. This shows the value of an advert. in your splendid paper. Those who have not received a reply will know the reason.—Y. GOODACRE, 82, Liquorpond-street, Boston.

Through illness Mr. H. Twine has resigned the secretaryship of the Hucknall Torkard C.B.S., and Mr. A. A. Asbury has been appointed to the post with Mr. J. Pepper, assistant secretary. All letters should be addressed to 7a, Carlingford-road, Hucknall Torkard, Notts.

We were glad to hear of the support the Northern Crest Club decided to give our next show, writes Mr. F. Gordon, hon sec., Sunderland C.B.S. We are sorry Mr. George Sutherland has left our ranks through ill health, and one and all wish him a speedy recovery and the best of good heath.

The annual dinner of the Liverpool fanciers (under the auspices of the G.C.A. and L.B.B.A.) takes place on March 21st, at the Star and Garter Hotel, St. John's Lane. The tickets are 2s. 6d. each, and local bird-lovers desirous of attending should write the secretaries, Messrs. Hadwin and Barratt, 28, Pembroke-place, Liverpool.

The Swansea and District C.B.A., writes Mr. A. Hitchings, sec., have engaged the following amongst their specialist judges for the annual open show, Nov. 6th and 7th next:—Yorkshire, T. H. Melhuish (Cardiff); Norwich, etc., J. Richard (Mountain Ash); Border Fancy, D. H. Tedstone (Brecon); Scotch, A. O. V., and Foreign, J. H. Jones (Merthyr Tydfil); British, A. Howe (Wellingborough).

The balance-sheet of the Inverness O.A. to hand, duly audited by Messrs. J. R. Craik and George Macdonald. The income was £81 14s. 6½d., expenditure £80 11s. 1d. Leaving a balance to be carried forward of £1 3s. 5½d. The number of Cage Bird Fanciers at present on the roll is 35. An effort is to be made to bring it up to 60 before the close of this year.—ALEX URQUHART, Sec.

Great Yarmouth Show has been fixed for November 6th and 7th. The judge elect is Mr. C. A. House.

At Weybridge Show, on December 4th, an extended classification will be given. Mr. J. Robson will judge.

Mr. J. H. Verrall, writes: I am happy to say that my present address is 70 Landsdown Street, Hove, Sussex.

The advertisement under British Hardbills last week, addressed D. Young, of Cardiff, should have been "Dymond," Aire-rd., Cardiff.

I have removed to 18, Ryedale, East Dulwich, writes Mr. A. E. Rogers. Your coloured plate of Norwich and the Crystal Palace issue were perfect.

Lovers of British Birds should not overlook Mr. Allen Silver's lecture on "Bird Life and How to Observe It," before the City and Suburban A.C.B. on Monday evening next.

The Palace Show Number of CAGE BIRDS, with plate entitled "A Blaze of Colour," is, I think, an exquisite production. Allow me to congratulate you on same.—JOHN MACPHERSON (Erith).

Have had CAGE BIRDS ANNUAL a week now, and have had some fine lessons out of it. I think it a very good book for the money and very useful for bird fanciers.—T. DAVIDSON (Hawick).

Owing to the report in your valuable paper, CAGE BIRDS, on the Linnet contest at the "Skinners Arms" Leeds, writes Mr. C. Hunt, the sec., a surprising number of people and birds turned up to the contest on March 3rd.

Finding that Mansfield, C.B.S., had decided to hold their show on November 1st and 2nd, our members generally had no desire to clash with same, so decided to return back to their old date, November 8th and 9th.—A. A. ASBURY, Sec. Hucknall Torkard C.B.S.

Thanks for Part 1 of CAGE BIRDS ANNUAL. The publication is indeed a splendid one, and no bird-room could possibly be complete without a copy. It is, in fact the "Whitaker" of the Fancy. I trust the enterprise you have shown in producing such a fine work will be fittingly rewarded.—J. B. WATERMAN (East Dulwich).

There were a large gathering of sympathisers at the funeral of the late Mr. John Woodhouse, of High-street, Portsmouth, who for a period of about twenty years was the Secretary of the Portsmouth Fanciers' Association, in which he took a very great interest. There were a very large number of floral tributes, including a wreath from the members of the Portsmouth F.A.

A remarkable box-full of testimonials has been sent for our inspection by Mr. E. Taylor, the well-known bird specialist, of Thornton-road, Bradford. There are hundreds and hundreds of them, all of recent dates, and all expressing the satisfaction of delighted clients. They evidence the extensive nature of the business transacted by Mr. Taylor, and show the care he employs in selecting just the right birds his customers want.

CAGE BIRDS Crystal Palace Show Number was simply splendid, and has been much, and more than favourably, commented upon here for its supremo excellence all through. It is "the" paper, and is bound to take even firmer hold, and have a much larger circulation than any other paper treating on cage birds at the present day. Good luck to it, say I.—R. JOLLIFFE (Glasgow).

What am I to do with all the letters, post cards, telegrams, postal orders, money orders, telegraphic money orders, etc., received in reply to my advertisement under the heading of Mules and Hybrids? Your printers have made a slight mistake, and priced the bird at 10/-, instead of 70/-. I should have thought fanciers would have guessed it was a mistake. Fancy a Goldie-Bullie at 10/-. I wonder some did not come here and fetch it! Please apologise in next week's paper, as I cannot reply to all.—W. ANDREWS (Weston, Olney).

Cedar Wood Oil for Red-mite.

Kindly recommend my English cousins across the seas writes Mr. H. S. Ross, St Louis, U.S.A., to try Oil of Cedar for red-mite and note results. Do not put it on the birds, but sprinkle it on the cage. It is a sure cure; try it, and see.

Southern Norwich Plainhead Club.

Will those members, writes Mr. F. S. Matthes, the Hon. Treas., that have not paid their subscriptions for 1906, kindly forward them on to me? I want to make accounts up for the year 1906. I shall also be pleased to receive donations to our Prize Fund.

Intending Competitors

should note that the Judging Competition in connection with the Coloured Plate issued with our recent Crystal Palace Show Number

CLOSES FIRST POST TUESDAY, MARCH 12th next.

Mark all envelopes "JUDGING COMPETITION" in top left-hand corner.

A CASE IN POINT!!!

Show Secretaries and Committees Note!

"Please withhold our Show Date until further notice," writes Mr. J. M. Nicholson, Hon. Sec., Seaham Harbour and District C.B.A. "I find we are clashing with Gateshead, which is very undesirable, seeing we are so close together. We had thought all Shows round our way were already fixed up."

The above letter should bring home to every Show Official the desirability of at once placing his own particular fixture in our

SHOW DATES FIXED COLUMN.

It is practically the only safeguard against clashing, that frequent cause of numbers of disastrous shows. For a list of the many other weighty benefits which also accrue

Peruse the announcement made on this page last week.

Wild Birds in Leicestershire.

The "London Gazette" recently contained an order by the Home Secretary, dated Whitehall, February 20, cited as "The Wild Birds' Protection (County of Leicester) Order of 1907," which states the W.B.P.A. shall apply within the county of Leicester to the following species of wild birds in the same manner as if those species were included in the schedule to the Act:—Tree-creeper, Pied Flycatcher, Spotted Flycatcher, Hedge Accentor (Hedge Sparrow), House Martin, Sand Martin, Swallow, Swift, and Wagtail (all species). The order further protects the Goldfinch and Kingfisher during the whole of the year, while certain birds are protected on Sundays.

Mr. G. H. Barnwell, Hon. Sec. of the Harrogate C.B.S., informs us that he has opened a bird fancier's establishment at 26, College Road, Harrogate.

Four shirts, four waistcoats, and two coats were regularly worn by Samuel Wingfield, an eccentric octogenarian who has died at Swadlincote, Leicestershire. Though evidently a chilly mortal, it seems that he had a warm regard for the birds, since we learn that the Sparrows in the neighbourhood were in the habit of feeding from his hands.

The balance-sheet for 1906 reaches us from the Secretary of the Crested Canary Club, Mr. J. Tyson. The document shows a cash balance in hand of £15 1s. 9d., in addition to other substantial assets in the form of challenge cups and bowls. Against these have to be set a liability of £21 for two challenge bowls. Subscriptions for the past year total £32 10s., from 130 members, whilst special donations amount to £9 19s.; £7 15s. was awarded during the year as special prizes, in addition to medals, cups, etc.

The Chellow Dean Canary Show, recently held for the benefit of the Cinderella Fund, resulted in the executive handing over £15 to the Fund, leaving a small balance in hand as a reserve towards the next show. The committee appeal to all fanciers who have the interests of the "poor bairns" at heart, to assist in making the next exhibition even more successful. It is proposed to hold this as near the centre of the City of Bradford as possible, and the name of the exhibition is to be altered to "The Bradford and District Cinderella Fund Canary Show."—J. GREAVES.

THE
BIRD WORLD
MAGAZINE
For MARCH
IS
Now on Sale everywhere
It is the most fascinating number yet issued, and should be read by every bird lover.
Exquisite frontispiece in color of Green Canaries, and many other beautiful illustrations. In point of interest, its contents have never been surpassed.

F. CARL,
154, FLEET STREET, LONDON.

Mr. J. C. Barnes (Walkley, Sheffield) is to judge at the following shows:—Grimsby, October 16th; Newcastle, October 18th; and Hull, November 22nd.

Mr. W. H. Cook (Stockport) writes:—I think CAGE BIRDS and the "Bird World" magazine just splendid. I am doing my best to get you new readers.

CAGE BIRDS is the paper to advertise in. I have sold over 100 birds in two months through CAGE BIRDS. With all best wishes for future success.—C. BEAR, Warley, Essex.

Mr. J. Firth (Sheffield) writes:—Please thank all who replied to my last advert. CAGE BIRDS is a wonder for advertising in, there is no question about it, CAGE BIRDS must have a wide circulation.

Mr. Roland Eastman, the president of the Glasgow and West of Scotland Club, writes that he intends seeing that everything is fair and above-board in his club so long as he is connected with it. They hope to have a big open show this year, and he is offering a cup for members' competition.

A very excellent sample of Canary Marking Rings reaches us from Mr. A. C. Hughes, Hampton Hill, Middlesex. They are made of aluminium, and are non-corrosive; those made not to take off are seamless, while those to open have a very neat joint, and are easily put on and closed. They may be had either numbered consecutively, or with initials; of course, with the year. A hint given by Mr. Hughes regarding their use may be of interest to readers. He says:—The best time for putting on the rings is the seventh or eighth day. Do not put the rings on too early, or the hen, when clearing the nest (which is their custom up to the seventh or eighth day) may notice the ring, and trying to remove it throw the young birds out of the nest. A good plan is to give the birds plenty of white nesting material, as by that means the rings do not show up so plainly.

ILLUSTRATED IDEAS

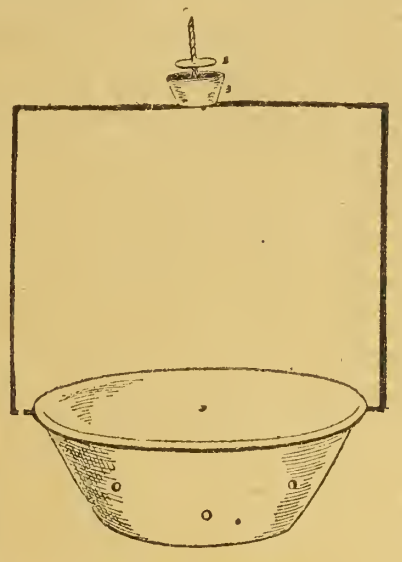
Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 81.

A MITE-PROOF NEST BRACKET.

Sent by W. Hood, New Road, Guisborough, Yorks.

Visiting an invalid friend (in the Fancy) the other day, writes Mr. G. Atkinson, Guisborough, I was delighted to see his original mite proof nest bracket, so asked if I might send a sketch to our paper, CAGE BIRDS. He was delighted to see I had taken such an interest in it.



Mite-proof Nest-bracket.

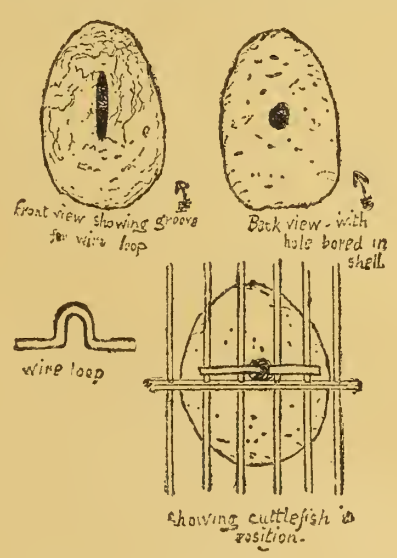
1. Screw to go in cage-top.
2. Washer, to prevent shaking, which fits close up to the wood-work.
3. Oil cup.
4. One piece wire, bent to shape, to form the hanger.
5. One piece wire, bent to shape, to fit nest-pan, and showing nest-pan hung in position.

No. 82.

A SIMPLE WAY TO FIX CUTTLE-FISH.

Sent by D. E. JONES, 6, Brickiln Lane, Lower Gornal, near Dudley, Staffs.

Although several methods of fixing cuttle-fish to cages have been recommended, they all require more or less complicated appliances, and as none of them are so simple and secure as the one shown here, this idea may not be out of place. The sketch will explain itself. All that is required are some



To Fix Cuttlefish.

short pieces of wire. Bend half the number into loops as shown. Scrape out a groove in the soft limy part down to the hard shell at the back, bore a hole in shell just large enough for the wire loop to project through at the back. Then the cuttlefish may be fixed in the manner shown to any part of the cage front, and it will be held perfectly secure until all is consumed. —DAVID E. JONES.

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else. Sold in tins, 3d., 6d., and 1s each.

For the small sum of Sixpence 6d.
You can obtain on order from your newsagent the one and indispensable book of reference for cage bird keepers,
"CAGE BIRDS" ANNUAL
for 1907.
PART I.
This Complete Guide to the fascinating and profitable hobby of bird-keeping now appears before the public for the fifth year. Anything and everything that the bird fancier requires to know will be found in its pages. Just read this list of contents:—

Wolverhampton C.B.S.—March 12th, at Vine Hotel, Princes' Square, 8 p.m. Programme for the year.—F. Howes, hon. sec.

York C.B.S.—March 11th, at All Saints' School Room, North Street, 7 p.m. Show of British birds; hoping all members will do their best to make a record show.—T. Boyle, sec.

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Norwich Plainheads.—**J. H. Payne.** Yorkshires.—**H. W. Battye.** Crests & Crestbreds—**W. E. Greeves.** Cinnamons & Miscellaneous Canary Queries—**J. North.** Border Fancies—**J. Wild Bird Life—**H. Norman.**

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Hen With Chill (Grocer).—Am pleased to hear your Norwich hen is so much better; I have no doubt she will be quite well again as regards the chill when you have completed the treatment recommended. The dropping of a few feathers may be caused by the chill she caught, or it may be through change of rooms. When you have given the full treatment advised, then follow up with that you will have noticed in last week's issue.

Norwich Cock With Bad Thigh (Young Novice).—Bathe your bird's leg with warm water daily. Put the water on with a piece of soft sponge, and when you have finished soak up the moisture with a piece of an old silk handkerchief or a bit of cotton wool. Then slightly warm a little hazeline cream and apply a little with the tip of your finger; do not rub it in, only gently dab it on.

Stuffy, and Sits All Day (A. R. W.).—Give your bird in its drinking water a piece of sulphate of soda about the size of a small horse bean, twice in a week. Then give ten drops of tincture of quinine in two tablespoonfuls of water, and let him have this to drink on alternate days for a fortnight. Twice a week let him have a little egg food, to which add five drops of Parrish's chemical food. Give a few sprigs of watereress two or three times a week.

Hen Not Laying, etc. (Canary).—Give both your birds ten drops of ipecacuanha wine, and ten drops of glycerine in their drinking water for a fortnight. Then give instead, for a week, a little honey which has been dissolved with a small quantity of warm water. Also give a piece of boiled carrot twice a week. The hen will no doubt lay in the nest-box this year if she gets all right again. I should advise you to keep them separate for a few weeks.

Outside Breeding House (J. B.).—I should advise you to build a structure at least 8 ft. long and 6 ft. wide, for you will want cage room or a flight to put your youngsters in. You do not say but I take it that you intend putting up your six or eight pairs in cages. Let your lean-to house be 8 ft. at the back, and slope to about 6 ft. or 6 ft. 6 in. I should advise you to case it in with match boarding, say, 3 or 4 ins. from the outer boards, and fill in with pine sawdust. This will make it much warmer in winter. Have the floor 6 or 8 ins. off the ground; this will not only keep it dry, but will leave plenty of room for a cat to run under and thus keep away the mice. See that the eaves of the roof come well over so that the rain will not run down the sides of the shed. See that your door and window fit well, to avoid any draughts. In the summer I should advise you to whitewash the outside of the roof. This will make several degrees difference to the inside temperature. During the hot weather have a door half wire so that your birds may have as much fresh air as possible; this will help to keep the place cooler. I should get estimates for building, if you do not intend to do the work yourself.

YORKSHIRES.

We regret to learn that Mr. Battye is indisposed, and unable to give attention to queries this week. He hopes to answer all to date in our next number.—Ed.

GREENS.

Answered by S. HADWIN.

Swelling Round Eye.—Your bird has evidently had a knock on the eye, and from your description I should take the swelling to be a sort of water blister. If this is so, prick with a fine needle, and then bathe with warm water, to which a few drops of disinfectant has been added, using a small soft sponge for the purpose. Then anoint the place with a little boracic ointment. Continue every other day till better. I do not like the ravenous manner in which your bird eats; I should say it is not finding sufficient nourishment. Give best Spanish canary seed in hoppers, and a good mixture of all kinds of seeds used for birds, mixed in equal parts. Give also 12 drops of Parrish's chemical food in water every other day until the bird is thoroughly well.

ROLLERS.

Answered by F. A. LESTER.

Roller Hoarse and Singing Hens (Noel).—The treatment you are using will be about right. I should only advise glycerine and honey myself. I do not see any reason why singing hens should not be as good as any others. Ladies that talk a lot are often as good mothers as those that say very little, and I do not see why this should not apply to Canaries. It is a matter of fancy, I believe, and I should not hesitate to take a hen that sings.

Roller Cock that Pants, etc. (German Cock).—Try this mixture, giving the bird one teaspoonful in his drinking water—viz., 1d. simple syrup, 1d. glycerine, 1d. ipecacuanha, and one tablespoonful of whiskey. Shake this well before using, and give it a fortnight's trial. Also give him a piece of raw onion between the wires of his cage. If these do not succeed, I must give him up as hopeless.

Rollers Paired that Quarrel (May).—You have commenced wrong. You should have put them in separate cages, and hung or stood them side by side till you saw the cock thoroughly agreeing with the hen, and then put them together. The cock may not be ready yet or the hen may not. Try them as I suggest, and I think you will find things go along more smoothly.

A Variety (Ignoramus).—Glad you found our advice beneficial. We are always pleased to help our readers. Yes, Osborne biscuit will do in place of the Zweiback egg food. I make it myself as follows:—Four biscuits, crushed to a powder; the egg finely grated and thoroughly mixed by rubbing between your hands; half teaspoonful to each bird, unless they have young ones. They want a lot when the youngsters are growing. The sample of rape seed sent is English or Dutch black winter rape seed, and is not liked by Canaries. You want German summer rape seed and small violet-brown seed. Two parts rape, one part canary, is my advice, but if the packet seed mentioned seems to agree with them, by all means continue it. Discontinue the egg food during the time of sitting, and do not keep the cock with the hen during this time. Put him back when the youngsters are about 16 days' old. The Roller that has not sung since his moult, and fidgets so, will be better for closing down in a song-box. He may be better if you breed with him. Try him. It is no trouble to answer your questions.

MISCELLANEOUS CANARY QUERIES.

Answered by J. NORTH.

Pant and Rattle.—My two Canaries are ailing; they pant, and when held to the ear they give a rattle. I have them in an attic, and feed on plain canary seed and occasionally a little maw seed, and give Parrish's chemical food twice a week.—T. CLARK.

I take it your birds have got a "chill" or inflammation of lungs and liver, through being kept in a cold room and, perhaps, being fed too sparingly after; very likely they were kept in a warm room and over-fed before you purchased them. Birds thus affected are not at all likely to recover unless immediately removed to a warm room, and fed on nourishing and easily digested food, such as bread and milk sop, sprinkled with seed. Add to two tablespoonfuls of drinking water 10 drops of the homœpathic tincture of aconite and the same of antimonial wine, both obtainable at any chemists. I do not think it is "Canary Asthma," but time will prove. With prompt treatment I think they will get well.

Irregular Moulting.—Canary is always pecking at its feathers, and looks rough, especially on its back. It has been dropping feathers. Last summer she laid several eggs, and reared one young one.—F. FIELD.

I think your bird is troubled by red mite. Search for same by candle-light, and if found let the cage be thoroughly scoured, and the bird's plumage peppered with freshly-ground pyrethrum insect powder. Its irregular moulting also suggests liver trouble, and this to a great extent may be remedied by diet. Give plenty of sweet apple, boiled carrot, watercress, chickweed, or groundsell. She should not have hemp or linseed, but plenty of canary seed and a fair supply of German rape.

Moulting for Two Years.—Canary has been moulting for the last two years. Its feathers come, and it then keeps pecking at them. The bird seems to be quite healthy otherwise.—R.S.

I could have given you a more helpful answer had I known whether your bird is a cock or hen. If the latter it is certainly useless. You do not say whether it sings or not. It seems to have contracted the vicious habit of feather plucking, which is almost impossible to cure. Sometimes it may be done by giving the bird pieces of tape to play with, tied to the wires. It should have some crushed eggshells scattered with its sand, and a piece of cuttlefish bone to pick at, also the hard stems of watercress or groundsell. Search for red mite, and if found exterminate them as advised to another querist.

White in Pupil of the Eye.—I applied the lotion recommended, but it seems to give pain. Shall I discontinue altogether? Do you think the other eye will be affected; should he be kept in the light?—L. DICKIE.

I do not remember answering this query previously, and cannot, just at present, hunt up the reply. I cannot, however, think that I advised such treatment, because from every point of view it is a case of cataract of the eye, for which there is no remedy. The application of pain-giving lotion is worse than useless. My experience of such troubles is that both eyes generally get affected. If you decide to retain the bird, it would be well to let it be placed in a good light, and where there is plenty of fresh air.

Elementary Queries.—(1) What food can I give paired Canary birds? (2) When young ones are hatched, what food can I give them? (3) How long shall I keep hen with young ones? (4) How many days does it take to hatch? (5) How long has cock to be with hen before eggs should be fertile?—JOS. LEAN.

(1) Your birds seem to have been paired some few weeks too early, unless you have special warming and lighting facilities of which I know nothing. The usual time is end of March. (2) Hard-boiled egg and bread crumbs, or crushed biscuit; also salad, such as watercress, lettuce, chickweed, or young dandelion leaves. These things also to stock birds when paired. (3) If hen is rearing her brood without the assistance of the cock, she should be allowed four weeks for the task; but if her mate is helping, she might do to nest again when the young are three weeks old; the cock will finish them off. (4) Thirteen days. (5) Two clear days. You would do well to obtain a book on the management and rearing of Canaries from CAGE BIRDS office. You would find all these elementary matters dealt with and explained at greater length than it is possible to do here in these columns. Try House's "Canary Manual," post free 1/2, postal order.

Young Birds Dying.—Last season I lost a number of young, and all seemed to die of stoppage of the bowels. Fed on chopped egg, home-made bread, and fresh-gathered watercress; they had good parents.—ISAAC OLDCORN.

It is extremely difficult to account for such ill-luck. Probably the reason is this, that the constitution of Canaries as a class is not well adapted for our English climate. I have a very strong impression that the mischief is caused very early in the morning, when the hen has gone off duty to get her breakfast; the youngsters "catch cold," as it is called, but which is congestion of the liver; thence follow constipation and inflammation of the bowels. Try the plan of giving lettuce instead of watercress, and tea biscuit in place of bread crumbs.

Concerning Nest Pans.—(1) Is it necessary to paste in the felt lining in earthenware nest pans? Until this season I have used the old-fashioned platform with hat felt nests. (2) Suppose a hen does not build a nest, would it do to put the eggs down on the felt without putting anything under them. I fancy my pans are too deep.—J.A.

(1) It is not absolutely necessary, because some hens work pieces of nesting material into the ventilating holes, and the nest gets shaped and fixed on these, but it would be better to paste the linings into the pans. (2) You should press some hay and moss into the lined nest pan, and do your best to shape it like a nest with a warm hard boiled egg, going round and round. Add some "doe hair," not cow hair, and then put the eggs in the centre. (3) They will not be too deep when the nesting material is worked into them by the hen. The young ones do not eject their droppings over the side of the nest until they are about a week old.

Heavy Breathing.—Cock Canary to be paired up end of this month. Have noticed that he breathes a little heavily. He is a grand singer, and a young bird.—R.L.

I cannot see that there is anything seriously amiss with your bird. Quite likely you have been giving some egg-food, or salad, of which he has taken as much as he possibly could, and this may have made him puff a bit. See that he is not allowed to overfeed himself. It is not a matter of dosing with medicine, but one purely of management and dieting. Perhaps the hen is not so fat as the cock. They will probably be all right when they are paired up.

Hen's Prospects.—Hen Canary had ten young last year when paired to a Brown Linnet, but she would not feed more than a week, and then she went to nest again.—A.K.

I should strongly advise you to pair your Canary hen this year to a Canary cock; in fact, I assume you contemplate doing so, or you would have addressed your query to Mr. Weston. In this way you might get the chicks reared, because the Canary father would be there to assist, not only by actually feeding the youngsters, but by feeding the hen as well, and so keep her brooding the young instead of her leaving them in search of food. I regret I cannot for certain tell you whether she will feed her young this year. I can only say I hope she will under the different circumstances. It would be the better fanciership to try her yet another year.

Loss of Voice and Feather.—Bird has lost its voice and is losing a few feathers. I feed on canary seed three parts and rape seed one part; piece of apple once or twice a week.—H.P.

Your bird seems to be in low condition, but at this time of year it should easily improve under the following treatment:—First of all search for red-mite by candle-light, and if found proceed to exterminate in the way often suggested in these columns. Let the bird be kept in a box cage, and in a warm room, or where the sunshine comes. In addition to usual seed, give a teaspoonful of egg and biscuit food every day, on which you have let fall three drops of Parrish's chemical food. Give also salad or sweet apple or boiled carrot.

Soiled Plumage.—Buff Canaries are very dirty. They bathe in cold water, but do not get clean. Can I put anything in the water to get them clean? Would you advise washing them so near breeding time?—W.E.B.

As a rule, it may be taken as a sign of low condition, if a bird does not keep its plumage in a tidy and clean condition, assuming it has the opportunities for bathing. There are exceptions, of course, for it is not to be expected that birds in smoky towns and cities can possibly keep so clean as those in the country. The nearness of the breeding season is no reason why the birds should not be washed with warm water and soap, being dried before a fire in the usual way. If the water in your house is very hard you could soften it with a little washing soda, or collect some rain-water, which is the best of all for washing.

Loss of Feather.—Last year I kept several Canaries in a very warm room. After some time they lost their feathers round their beaks and on top of their heads. This year I have a hen on which no feathers have grown. Do you see why I should not breed from her?—CANARIENSIS.

I do not think that the warm room of itself could have caused the loss of plumage, unless the heat upset the liver; in such cases, the feathers sometimes come out. Canarics rather like high temperatures, but it is not wise to keep them in a hot place unless it is efficiently ventilated. A little dry sulphur sprinkled on these bare places will often cause the plumage to grow again, partly because the sulphur kills the microscopic insect that causes the trouble, and partly because the remains of the sulphur enter into the growth of the young feather. I see no reason why this hen should not be paired in the usual way, and at the usual time.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

Sex of Skylarks (C. B.).—There is no certain way by which inexperienced fanciers may sex Skylarks. When picking a bird from amongst a number, the largest should be chosen, one with very long wings, and it is certain to be a cock—providing, of course, all the cocks have not been removed and hens only left. Dealers experience no difficulty in sexing Skylarks. The difference in the length of the wings of cock and hen is most marked, and shows plainly even when they are folded at rest. You should keep your bird until the genial spring weather arrives, when, if it does not open in song, you can write it down a hen.

Food and Rape Seed (G. Woodbridge).—The packet Softbill food you send is excellent, and quite suitable for a Thrush and a Pekin Robin, providing it is mixed (prepared for use) in the way I so frequently recommended in this column—note reply to an inquirer re Nightingales last week. The "rape seed" you send is not the rape seed wanted for birds. In fact, it is not that kind of rape at all, but most probably turnip or cabbage seed. German summer rape is a very small seed (half the size of yours), and dark red or bluish-red in colour, whereas yours is black. Summer rape has a sweet, nutty taste when chewed. Any which tastes acrid, or very hot, is either adulterated or not genuine.

A Substitute for Egg Food (G. H. N.).—Most fanciers, and especially breeders of exhibition Canaries, are staunch believers in egg food (either with bread crumb or biscuit), freshly made each morning, or twice a day, as tho very best thing on which high-class birds can be reared. I am certainly not going to argue the subject here, however; you must decide for yourself the course you will pursue. I, personally, see no reason why good youngsters should not be reared on a suitable substitute for the freshly-boiled eggs. Your "egg cake," which you say contains flour, new-laid eggs, butter, milk, and a little baking powder and sugar, looks and tastes very nice. Give it a trial by all means, if you feel inclined. You should use the merest pinch of baking powder, though; in fact, personally, I should leave it out altogether.

What Bird? (Dai).—The bird you describe is a cock Reed Bunting in winter plumage. If a big, rich-coloured, and well-marked specimen, it stands an excellent chance of success on the show bench. It should be exhibited in an ordinary Finch show cage—Norwich Club pattern, enamelled inside and wires very dark green; some prefer very light blue, so you had better make a final decision for yourself. Feed and treat it on exactly the same lines as recommended inquirers on Corn and Yellow Buntings in last week's issue.

Breeding in Indoor Room (S. P.).—You will not have so much success, I feel confident, with pairs flying loose in your 12ft. square room as you will with pairs kept in suitable cages therein. Many people write to me to know "how many and what couples of British birds they can let fly together to breed Hybrids." I never know how to reply to them, for I don't want to discourage them from trying to breed birds, yet at the same time I know it is next to impossible they can succeed on any such lines. Most British birds do not even relish the near proximity of others when breeding in a wild state; how then can they be expected to tolerate a mixed crowd in a confined room or aviary? Yet a many people seem to entertain the notion that one only needs to throw so many cocks and so many hens into such places to produce Hybrids galore. Would it were, indeed, so delightfully easy! The best thing I can recommend you to do, is to put in hen Canaries with suitable Finch cocks (Goldie, Linnet, Siskin, Greenfinch, Redpoll, etc.), for then you would be likely to have some young to look at when the season comes to an end. Certainly you might try three or four Bullfinch hens as well, with, say, a dozen hen Canaries. If not house moulted (the Britishers), they should be fairly steady and used to captivity. The nesting sites need not necessarily be sheltered, though it is well to put nest boxes in all the secluded corners, and also to make a few secluded spots for their reception. You could use nest boxes, nest pans, wicker travelling cages, old nests from the fields, etc., as has been frequently mentioned of late.

Indoor Breeding (Migration).—It would be better if the birds in the two places could not see each other; they may indulge in fighting and squabbling through the partition wires. The part 6ft. long by 27in. wide would not well accomodate above half-a-dozen hen Canaries and three cocks. Even then the cock-birds may quite likely fight viciously. You could turn the birds into tho shed about the end of this month (March).

Bullfinch Hen Vicious (Hybrid).—Many Bullfinch hens have spells when they seem to behave viciously to their partners; some are alternately loving and vicious in a most exasperating manner, one moment chasing and mauling their partners about, and the next loading them with caresses, so to speak. Many fanciers, when they get a Bullie hen of a disposition like this, find her a cock Greenfinch for a mate. This stout and testy gentleman soon takes her by the hair of her head and bangs her about if she tries any such capers on him. Your best plan would be to keep a wired partition between the Bullie hen and Canary cock during greater part of the day. Withdraw it first thing in the morning, when it is ten to one that the hen will at once "call" to him. And that is all you want. The feeding of Bullfinches was dealt with fully in a reply last week. Canary-Bullies, if really tip-top specimens, are just a shade more valuable than Greenfinch-Bullies; but "champion" examples of the latter cross are scarce, and worth a high figure.

Linnet and Bullfinch in Garden Aviary (Avis).—A cock Linnet and hen Bullfinch might do well in your garden aviary, 8ft. by 3ft. by 2ft. The depth from front to back (2ft.) is really insufficient, however, so you will need to keep a sharp look-out for cats, also to protect it against violent storms. You will no doubt have seen many hints I have given lately on the nesting arrangements for Hybrid couples. The Linnet might mate better with the hen Greenfinch, and certainly the latter would be far the more likely of the two hens to bring up her young by herself. Still, the Linnet-Bullie cross is far the more desirable one to try. See that the nesting site you offer her is sheltered from prying eyes; further, don't interfere with her unless it is absolutely necessary.

Greenfinch Bare (New Reader).—The proper seeds for a Greenfinch were mentioned in a reply last week. I can only suggest that your bird is suffering from the attacks of red-mite, and, if so, you should treat it as explained in detail in the pages of CAGE BIRDS ANNUAL. You give me absolutely no information as to where you keep the bird, whether it has moulted, or whether you are now finding feathers in its cage, how you feed it, etc. Without such information it is impossible for anyone to advise you.

Pairs for Aviary (G. Higgins).—Four hen Canaries will be quite sufficient to turn in along with your cock Goldie and cock Linnet. Your aviary, however, would easily accommodate another three birds. The Goldfinch would very likely not touch the eggs at all; they rarely do so except when kept in small cages. I should put the birds together at the beginning of April (or end of this month) if the weather is sunny and genial.

Bullfinches in Living Room (E. G. W.).—A cage 5ft. by 1ft by 1ft. is a curious size; it certainly would be greatly improved by being 2ft. in height. I see no reason why your pair of Bullfinches should not nest therein, especially as they are in such fine condition, and so tame. It is very early as yet, however. Whether they would rear any progeny is very uncertain; still, you have more than a sporting chance, as they say, of getting young. It will be very interesting. I am sure.

THE CANARY BREEDING SEASON

Will soon be with us and all who contemplate cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries :—

HOUSE'S CANARY MANUAL

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL." The following Summary of Chapters, etc., will show you how completely the ground is covered:

Aviaries and Cages.
Show Cages.
Perches.
Breeding Canaries.
The Young Birds.
Food for Nestlings.
Hens Refusing to Feed.
Sweating Hens.
Young Birds Dead in Shell.
Red Mite.
Clear Eggs.
Moulting.
Exhibiting.
Diseases (treated very fully).
Every variety of Canary is treated upon at length and illustrated.

Mr. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

FIFTY COPIES of the Third Edition slightly soiled—9d. each to clear.

Skylark and Its Management.—I have a Lark. Can you tell me if it can be made to take a bath, and would you tell me the distinguishing features between a cock and a hen, also what is the best food for it?—J.S.

You most certainly should not force a Skylark to take a bath, for those birds do not bathe in the sense that Canaries and similar small birds do. I am continually telling correspondents how to manage Larks, and if you had looked over a few old numbers of CAGE BIRDS, you would have easily found the "recipe." Here you are again, however. A simple stock food for Larks, which will keep for ever and a day (almost) when sealed in tins, and which any good corn-dealer or seller of birds' foods will mix for you, is:—Game (or partridge or pheasant) meal, four parts; meat meal, good ants' eggs and dried flies, one part each, by measure. Get the game meal without grit. If you have any difficulty in doing so, finely crushed puppy cakes make an excellent substitute. Damp quantity required for daily use with a little grated raw carrot or cold boiled potato, or finely chopped lettuce, chickweed, watercress, or other green food in season, and add a teaspoonful of preserved egg-flake or half a hard-boiled egg twice or so a week. Give three or four mealworms daily, and any other insects you can lay hands on, especially spiders. Give seed in a separate vessel (not along with the soft food), about a teaspoonful of canary seed daily, with, for a change, crushed hemp, groats, maw, or rape. Let the bird have a fresh clover turf as often as possible. Cover the floor of cage with (or give in a deep pan) a mixture of fine road dust and sand, in which a teaspoonful of insect powder, or powdered sulphur, has been mixed. The bird will dust itself in this, which is a natural action, and necessary. It is a very excellent plan, too, to have a second drawer bottom to the cage, made of tin or zinc, which is run in occasionally filled with water, in which the bird will paddle, and so keep its feet in order. Or, and even better, it may be filled with very wet chickweed, over which the Lark will run. Sexual distinctions are dealt with in another reply this week.

Mealworm Breeding.—Please tell me how to breed mealworms. I have put some in a tin with some meal and flannel, and they have turned black and seem dead. I have just started taking your hook in.—W.P.

What a "hardy annual" this question is! The method of starting a mealworm box I have often given in this column. Still, as you are a new reader, I will repeat it for you again. Get a large biscuit tin from a confectioner (about 2lb. size). Bore with a bradawl two rows of holes right round the sides at the top, within an inch of the lid. Cut four pieces of coarse sacking so that they will, when folded once over, drop flat into the tin, leaving about three-quarters of an inch space between each edge and the sides of the tin. Dry these thoroughly before the fire. Get a supply (pennyworth or so) of bran. Put a layer on the bottom of the tin, about an inch and a half thick. Put a folded piece of sacking on this. Then put another layer of bran; then another piece of sacking —and so on, arranging to fill the tin not more than three-parts full, and to have a piece of sacking at the top. Then turn a pint of mealworms (or as many as you feel disposed to invest in) into the tin. Put in a handful of fresh bran occasionally, under the top layer of sacking. It takes about 12 months to get into full breeding swing, i.e., for the mealworms to turn into beetles, beetles to lay eggs in the folds of the sacking, eggs to hatch, and young mealworms to mature. In the summer time it is often possible to buy a quantity of beetles from advertisers along with the worms, and one would save time by so doing. Many put beer-soaked rags (bung rags), dead birds, dog biscuits, bones, etc., in their mealworm boxes; but I never do so myself. Disturb the breeding box as little as possible, and always keep it in a fairly warm, dry place, such as a cupboard at the side of the fireplace. About every second year, and in January, turn out the contents and sift through a coarse sieve, especially the bottom part of the box. I cannot explain your mealworms going wrong (apparently), but they will do all right treated as above. They seem lifeless when about to change into beetles of course (it is early for that yet), and the beetles themselves are black.

Disheartening Luck with Fresh-caught Goldfinches.—I have awful luck with all the Goldfinches I buy, unless they are moulted. Am afraid something is wrong in my treatment. Can you give me a hint or two?—A.W.B.

It is difficult to know how to help you, seeing you give no particulars of the treatment at present adopted. I can say, however, that fresh-caught Goldfinches should always be kept in cages with inside seed-trough, so that their food is directly under their noses, so to speak. It is well to have the water inside, too; if this cannot be managed, then be certain they get at it. In last year's ANNUAL a most useful type of stock cage for Finches is illustrated and described, and you should adopt this form. Are you quite sure your Goldics are perfectly sound when you buy them? The great mistake fanciers make when buying fresh-caught Finches is to condemn them at once to a diet of dry, hard seed. In the wild state from which they have just been taken, their food is, broadly put, of a more or less soft nature, and the sudden and complete change on to dry seed is unquestionably responsible for much, if not all, of the "indigestion" or "stomach trouble" which carries so many fresh-caught Finches to that land whence none return. And, of course, if the birds have been any length of time in a shop awaiting sale, the "upsetting" may have commenced before you yourself lay hands on them. I think mixed seed very wasteful for these birds; most of them show a preference for one kind, perhaps two, and the others get knocked about the cage floor as the result of their searching for the favoured seed or seeds. For fresh-caught Goldfinches, I should put in a pot each of cracked hemp (not crushed), teazle, and niga seeds, and a pot of mixed maw, linseed, and canary; some advocate coarse oatmeal as well. In addition, of course, I would offer ample sunflower and summer rape, which had been soaked in cold water until it burst, or had just commenced to sprout, dabbing it as dry as possible with a cloth before offering it. Then there are the wild seeding weeds and grasses, thistles, hardheads, plantains, and the like, not forgetting flowering groundsel tops (not the coarse leaves). With the help of these latter foods (of which the Goldfinch fancier should always have a little store), the change on to the ordinary dry seeds can be made gradually, and without harm accruing. Should they seem to go a little "soft," the drinking water should at once have some sulphate of soda dissolved in it (as much as covers a sixpence to every two tablespoonfuls. A gentle dose of saline, if given in time, is, in my experience, the best medicine; in fact, I never found anything else of much use.

Management of Blackcap.—I have just bought a Blackcap. Presume it is a cock, top of head being glossy black. Should I observe any special rules in its treatment?—AJAX.

Your bird is a cock right enough, if its cap is glossy jet-black. Keep him cosy, and in a warmed room, subject to an equable temperature. By all means cover over the cage warmly on very cold nights; extremes of temperature are most dangerous to the welfare of migratory birds such as these. The general feeding of a Blackcap should proceed on exactly the same lines as laid down in the lengthy reply given "A.F." last week, to which I must refer you. When fresh caught they require an extra allowance of best ants' eggs, and a free supply of mealworms. Blackcaps are great fruit eaters, you must remember, and should always have some fruit on the menu, entirely mixed amongst the soft food, or hung up in the cage or wires if you like; banana, very ripe pear and apple, grated raw carrot, and even boiled potato, are very good to moisten the daily soft-food supply; some of my birds, too, were very fond of finely minced green stuff. For other fruit to use the choice is very wide; strawberries, garden currants, raspberries, grapes, elderberries, blackberries, and the like, are all more or less greedily devoured, while there is but little fruit one can buy at a shop that they do not appreciate. A slice of a ripe peach is esteemed a great delicacy. Do not forget insect food; do not, too, overlook the bath, in which they take a great delight, but don't give them icy-cold water in the winter.

Another Lark Bather.—My Lark, bought five weeks ago, has never used his bath, I think. Is it too cold weather?—A. JUTSON.

The solicitude you display in endeavouring to get your Skylark to take his matutinal tub very nearly makes me smile. Larks do not bathe quite in the sense that Thrushes and most other birds do. You need wonder no longer, therefore, at your bird's lack of appreciation of the rain-water you gather for him. A dust bath is what they need for regular use. Fill a dish or box of suitable depth with a mixture of dry road dust and very fine sharp sand. In this put a teaspoonful or so of any harmless insect powder. These birds delight to "ruffle it" amongst such a mixture. During suitable weather my birds were very fond of paddling about in a tray of water placed in their cages. (I had tin false bottoms made on purpose.) They also ever took delight in a fresh-cut clover turf which had had the garden sprinkling pan passed over it. Another fancier I know covers the water tray which he runs in his cages with ripe chickweed, and the birds paddle on and poke about amongst that—rather a nice idea! To give a bird an "extra special" cleansing at any time (say the day before you are sending him to a show), spray him lightly with clean soft (or rain) water, and while he is damp sprinkle his plumage well with sharp, gritty sand (not mud, mind you). After he has shaken and plumed himself he will look a picture. If soft water is not available, add one or two spots of Scruhh's cloudy ammonia.

Heads of Canary Seed (E. Marshall).—The heads of canary seed you send (presumably home-grown) are badly ripened, and contain but very small grain. It might be all right to give birds to pick over, partly for amusement, but for use as a staple article of diet I could not commend it—I should not use it as such myself.

Solely Hemp; and a "Chivey Linnet" (Amateur).—You say your two Goldfinches have had nothing but hemp seed since they could eat after being reared from the nest last year, and ask if it will upset them. No, my friend; hemp seed is the Goldfinch keeper's best friend. Surely, seeing your birds have done so well on it, and are in such good form now, you ought not to require any further proof of this. Let well alone, and don't listen to the empty yarns some people will persist in spinning. You can try the birds with some teazle, linseed, maw, and niger; they are sure to tackle the two latter, but only need have them as an occasional treat. Also gather them a few young, tender dandelion leaves, and the flowering and seeding heads when ready. The bird you term a "chivey Linnet" is in reality the Lesser Redpoll. They are most difficult to sex when house-moulted, the only safe guide being the song, or absence of it.

Concerning a Blackbird (Rolyat).—Now the swelling of the foot has gone down, discontinue painting with the tincture of iodine, and massage the toe gently every day instead with iodine ointment. Pleased to know the bird has come into song again. The reason I always specially mention game meal without grit is because it seems to me far from correct to force a bird (for that is what it amounts to) to take grit continually whether it wants it or not. My large Softhilis (the small ones, too, occasionally) almost always had a supply, such as a tin or dish, of grit to go at, and I frequently saw them rummaging about amongst it. But to pack grit away amongst the daily food of such birds is a different matter. At the same time, I may say I know one old fancier who uses chicken meal (which contains a proportion of calcined oyster shell and grit) for his Softhills, and he has told me several times he has never, to his knowledge, known any harm come of it.

Concerning Larks (New Reader).—There are no helpful sexual distinctions in the plumage of Skylarks; the only real guides to distinguishing their sex lie in the relative size and length of wing. The cock bird is the largest, and has a much wider sweep of wing, and the wings come appreciably farther down the tail when folded at rest. Keep your birds until Spring is well advanced, and the sunny skies are with us, when, if the Larks still keep mute, you can write them down as hens. If such proves to be the case, open their cage doors and give them their liberty—I am assuming, of course, their wings are in fit condition for flight. The Woodlark sings an entirely different kind of song to the Skylark—more round, mellow, and "hubbly," to put it crudely, lacking the power and gusto of the better-known songster. Which is the better of the twain must ever remain a matter of personal opinion only. I myself prefer the Woodlark as an indoor songster. You want to get the largest sized bow-fronted Lark cage the makers stock. The cloth top, though unnecessary with a steady bird, is yet always a useful fitment to have.

A Cage of Britishers (J.J.C.).—Your cage, 3 ft. 6 in. by 12 in. by 20 in. high, is really only large enough to accommodate four birds with comfort, so that your two Goldies, the Linnet, and the Siskin just about fill the bill. You might add a Lesser Redpoll; they are bright, cheery little creatures, and the cock has a merry little ditty. A good stock mixture would be:—Canary and teazle four parts each, hemp and summer rape two parts each linseed one part. Other seeds occasionally, in separate dish, as tit-bits. If any bird turns out invetcrately quarrelsome, remove it, and try another member of the species; it is surprising how dispositions differ. Thanks for kindly remarks.

Greenfinch a "Little Down" (W. D. Holt).—You must not put your ailing Greenfinch into a cage with another Greenie until he has quite recovered his usual health. I should take the hen Canaries away from him. For one day dissolve, in two tablespoonfuls of drinking water, as much sulphate of soda as just covers a shilling. The next day, and for one week after, mix a small teaspoonful of taraxacum (dandelion juice) in the same quantity of water daily. Any chemist will supply you with these things. Go out and gather whatever young dandelion leaves you can, and let him have four or five every day. Let him have a pot of maw seed in his cage.

What is the Difference? (B.T.).—Russian and Siberian Goldfinches are much larger than either German or British Goldies, and have much more white in their plumage; the Siberians are the largest and finest of all. Most Germans are the same size as British Goldies, and many cannot be told from them, though they are usually of an appreciably whiter cast of plumage. Russian and Siberian Bullfinches are very much bigger and finer than British Bullies, taken as a whole. The German Bullies which come into this country are mostly "broken pipers"—that is, hand-reared birds which have failed to learn their lessons. They are, of course, usually very tame, also usually very difficult for most people to tell from English Bullfinches. Either of the Goldfinches is quite likely to breed, though fanciers seem inclined to the opinion that Britishers are rather more free than the others. The Siberians breed the biggest Mules. Any of the hen Bullfinches are also likely to breed. Some fancy one, some another—the hand-reared German hens especially. The Siberians, here again, would throw the largest young.

From Far St. Louis (H. S. Ross).—Your Canary queries will be found answered by our Mr. North. Please do not mix them. Here is a correct stock mixture for a Goldfinch:—Hemp and teazle four parts each, canary two parts, linseed one part. For a Siskin:—Canary and teazle three parts each, hemp, linseed, and summer rape one part each. Give the other oft recommended seeds occasionally, as tit-bits. I am of the opinion that your Goldies and Siskins are moulting purely and simply, probably owing to climatic differences 'twixt the States and here. I don't think you will experience any repetition of the trouble next season, when they have become acclimatised. Canaries ought not to need "conditioning"; if in health they should come into breeding form in due season without having to be forced with stimulating foods. English breeders simply give a small teaspoonful of egg-bread per bird twice a week about the latter end of January, increasing it to three times early in March. They also give a little mixed seed now and again in addition. The hens get a little niger occasionally, and more frequently as the time for going to nest draws nigh. Goldfinches and Siskins are usually ready to breed (over here) about the middle of April. Old, tried mulers are sometimes fit before that date. I do not know what you mean by "Java Canaries," so cannot say whether or not they would breed in captivity. I do not think you will succeed in crossing a House Sparrow with a hen Canary. Thanks very much for "tip" re cedar wood oil.

Bad Luck (W. J. Dodd).—I don't believe in hanging birds out of doors during cold weather, and taking them indoors into a warm (more or less) room at night. Do you do this? If you mean that you put the Finches into a 4 ft. flight with hen Canaries at night, and catch them out in the morning on purpose to hang them out of doors, you are certainly making a great mistake. The constant handling and fright at being caught would be quite sufficient to make any bird "turn queer" and die. Keep your Linnets and Goldies caged off separately, and don't hang them out of doors until they have steadied down well; then you may have better fortune.

Singing Mules (New Beginner).—A Norwich hen will breed you just as good singing Mules as a Roller hen; what is more, she will, if a good specimen herself, breed bigger and more shapely youngsters. Let her be a yellow; then you may expect a few rich-coloured Mules to be thrown amongst the males.

Ivy for Aviary (Chick).—You need not be afraid of having ivy as a "background" for your aviary. It is excellent in every way. I was once fortunate enough to have a very strong growth over a wall I enclosed when making an aviary, and I found it a great acquisition. I should arrange the place right away. It will never do to disturb the birds when on the verge of the breeding season.

Linnet with White Head (Puzzled Browney).—A Linnet with head and shoulders pure white is worth a shilling or two more than an ordinary plumaged bird, if only as a freak. What should cause a bird to moult out like this no one could tell you—beyond, that is, generalising so far as to say that some change or loss of colour pigment was responsible for it. I don't think you will find

the bird one scrap more likely to breed a light Linnet Mule than any ordinary Linnet. I never found Albino and white-plumaged birds any help at all. Try him with a clear or ticked pink-eyed Yorkshire hen. You could get one at a reasonable price (note advertisement columns).

Game Meal, Dried Flies, etc. (J.C.W.M.).—The "Melox" answers admirably as a basis for the stock food of the large or more coarse-feeding Softbills; so does any good brand of dog or puppy biscuits, crushed to powder. The sample of dried flies is a good one, though I have seen better. Most "seem dusty," as you put it; but they should not be sifted before use by any means. Finches do not require egg-flake in a soft-food mixture designed for their needs. At the same time, you can put in an occasional teaspoonful if you choose, deciding the exact quantity by the number of birds to feed from it.

From Ireland (P. Bolgey).—I understand specimen copies, giving the feeding of Bullfinches and Linnets have been sent you. There is always a market for Chaffinches, Greenfinches, and Redpolls. Use our advertisement columns, or write any of the large dealers advertising therein.

Linnet Ailing (Sphinks).—Your letter is rather vague, but I should imagine your bird is somewhat constipated. Dissolve in its drinking water for one day as much sulphate of soda as covers a sixpence. Repeat two days afterwards if it seems necessary. Give maw seed liberally.

Bullfinch Recovering (E.M.L.B.).—I should not leave off the bronchial mixture too soon. Give it on alternate days with the chemical food. Continue this for seven or eight days; then give the chemical food only—plain water one day, medicine the next—for another fortnight. Distilled water is absolutely the best to use; unfortunately many are unable to do so.

Skylark with Insects (W. Ivatt).—It certainly is not proper for a Lark to swarm with insects. Dust the bird well with Keating's insect powder, especially under wings, round neck, and at root of tail. See other replies this week, and adopt dust bath advised therein; also the method of feeding.

Norwich or Yorkshire Hens (A.L.D.).—Both Norwich and Yorkshire hens will throw good coloured—if they are yellow hens—well-feathered Mules. Those from the latter are usually much slimmer in build than those from the former. The difference in song is nil. If you like stylish, not over stout Mules, with plenty of "swagger" about them, try Yorkshire hens, getting those on the heavy (stout) side. The Norwich type of hen, if possessing plenty of size, will be the more likely to throw exhibition Mules, as bulk (substance) is what most judges like to see in a show cage. You should now be able to make your own choice.

Cock Canary to Hen Linnet (W. Shaw).—It is not usual to mate a cock Canary with a hen Linnet, the reverse pairing being far the more likely to bring success. At the same time, it certainly has been often tried, and young have been produced. The hen Linnet is more uncertain, both as a breeder and as a mother, than the hen Canary when in captivity, as is only to be expected. It would be an interesting experiment, anyway. Give them a double breeding cage, with wired slide down centre, as recommended frequently of late, and hang it in a quiet spot. I gave hints on feeding Linnet-Canary couples only last week; see reply to "H. Owen."

Some Buntings (J.A.).—Corn and Meadow Buntings could not possibly be confused. The former is twice the size of the latter, and very stoutly built, broadly speaking bearing no distant resemblance to a tiny Tbrush, it being of a uniform sandy-brown colour, and streaked with black on the breast. The Meadow Bunting is decidedly more rufus in body colour, and has the head and neck very delicate bluish grey, with striking jet-black moustachial and cheek marks. In size and shape it is like a medium-sized Yellowhammer. I think you must be mistaken in saying both Corn and Meadow Buntings "breed plentifully near Cork." The former may quite likely do so; but the latter is so uncommon a visitor to these isles that it is a matter of hot dispute whether it should even be exhibited as a British bird at all. You may quite likely succeed in rearing Buntings under Canaries; but they will be worth very little more than specimens obtained in the ordinary way—unless, that is, they turn out exceedingly fine birds, fit for exhibition at the best shows. The Wheatear is a summer migrant.

Linnet with Overgrown Beak (A.W.).—It often happens once one commences cutting a bird's beak (and it is sometimes absolutely necessary so to do) that it grows faster than ever afterwards, and so the cutting operation has to be frequently performed. Keep a lump or two of hard mortar (from a very old wall) always between the cage wires.

Hen Goldfinch Mule (A. Randall).—The seeds, etc., for a Goldie Mule were given in the reply to "W. James" last week. Packet Finch mixture, if put up by a good maker, would answer admirably. Hen Mules are at a discount; nobody wants them, unless they are clears or very lightly marked. Yours is not sufficiently light in plumage to have any special value; I should say the 5s. given about fairly represents the latter. Being only a youngster, it should certainly improve in various ways with the next moult.

Mates for Linnet and Greenfinch (H.C.).—Many replies on this head have appeared during the last few weeks. Your Greenie ought to do quite well with the heavily marked Norwich hen; a similar mate would suit the Linnet. For feeding, see replies to "A. Oliver" and "H. Owen" last week.

In Outdoor Aviary (Beginner).—You will find your outdoor place, 6 ft. by 6 ft. by 3 ft., facing south, and with glass roof, intolerably hot in the height of summer, I am afraid. The heat is sure to adversely affect the birds therein unless you take steps to effectually shade it. If you take out the cock Bullfinch and one of the Redpolls, you could put in to the Bramblefinch, Linnet, Chaffinch, Goldfinch, and Redpoll (cocks), which remain, three or four hen Bullfinches, and three or four hen Canaries. Your feeding is correct enough. Only the Linnet and Goldie are persistent singers, though probably the Chaffinch has commenced to sing now. The cock Redpoll has a sort of song, though—not unpleasing.

"Coughing and Sneezing" (S.G.).—I don't quite know what to make of your letter. If my own Finches were regularly "coughing and sneezing," I certainly should imagine something was wrong with them. Is your bird-place either damp, or badly ventilated, or draughty? Do you take care your seed is not musty, i.e., is stored in a dry spot? If, as you say, it is natural for Starlings and young Thrushes and Blackbirds to "cough and sneeze" and "develop a cough," then I can only say that the specimens I have myself had were most unnatural birds. You say, too, that your Canary, which you have had "for six years, has almost always seemed asthmatical, but sings now as well almost as at first." Frankly, I am puzzled. And I give it up.

Stocking Two Aviaries (H.S.W.).—In the outdoor (partly open) aviary, I should put the Snow Buntings, Yellowhammers, Budgerigars, Bramblefinches, and Chaffinches (pairs), and the odd birds, Hawfinch and Greenfinch (cocks). The odd cock Chaffinch must be given his liberty, or he will cause you trouble. In the other aviary leave the Goldfinches, Greenfinches, Redpolls, and Siskins (pairs), also the three pairs of Cauaries. If any of the bachelor male birds cause trouble, remove them. I suppose you know you run grave risk in keeping Budgerigars with other smaller birds? They are apt to mutilate their companions, by biting off legs and other useful items of bodily apparel. Give all the seeds you see mentioned in my replies, with millet in addition.

British and Foreign (Siberian).—You would never have the slightest difficulty in distinguishing a real Siberian from a British Goldfinch. The former is much larger, and very much whiter looking in plumage. The habit you mention—running to and fro on the bottom of the cage and trying to hide away—is not a matter of nationality at all, but is a habit possessed by many newly-caught birds, Linnets, Siskins, Bullfinches, etc., in addition to Goldfinches. It is a habit which time, bringing in its train familiarity with caged existence, usually serves to eradicate, unless, that is, the bird is of a very "unkind" disposition. Candidly speaking, I don't like birds guilty of this behaviour.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Indian Parrakeet with Cold.—I have had the bird two years; it has done well so far, but now is breathing heavily, and has lost its voice.—J.L.

Get from your chemist a mixture of ipecacuanha wine, oxymel of squills, and glycerine, in equal parts, and put half a teaspoonful of this into the bird's drinking water daily until relief is given. Spray or dab the bird's nostrils with diluted glyco-thymoline, this will do no harm if a little is swallowed. Also give 6 drops of castor oil, either on such absorbent food as it will eat or direct to its mouth; this must be repeated as necessary to keep its bowels moving freely, *but not loose*. Keep the bird warm and quiet, but not in too dry a heat. Diet the bird as advised regularly in this column, and do not give slops or animal food of any kind.

Grey Parrot Ill.—Have had bird three months; it now appears very weak, gapes, and has gone off its food somewhat.—E.S.R.

If your bird is a young one, you had better give a little boiled maize (this only keeps fresh one day) for a time; give the dry mixture as well. This should consist of two parts each canary and oats, and one part each hemp, dari, wheat, and sunflower seeds; it should be well mixed, and a continuous supply kept in the cage. Give in addition, not altogether, but so as to vary the diet, ripe fruit, nuts, plain biscuit, boiled potato, green food (tender lettuce), grit, cuttlefish, and let it satisfy its thirst three times a day. For one day only put half-a-teaspoonful of Dinneford's magnesia in its drinking water; repeat this as necessary to keep its bowels moving freely, *but not loose*. You must not use a metal drinking vessel while giving drugs. For the next month put 6 drops of Parrish's chemical food daily on any absorbent food that the bird will eat. Keep it warm, quiet, and do not give tea, coffee, or milk slops, table scraps, or any kind of animal food whatever.

What Parrakeet?—Young Parrakeet, from Australia, with slaty-grey back and tail, yellow crest, white face, throat, shoulders, and part wings, with dark ochre-yellow cheeks. What kind is it? What is the correct food?—TAYSIDE.

As yours is a young bird, it is rather difficult to give a definite reply, especially as you give no idea as to size. It appears to be simply a male Cockatiel; if it has brick-red ear coverts, this is all it is. In this case, its diet is very simple, viz., canary and millet seed, with a few oats once a week as a change, with green food, grit, cuttlefish, and water ad lib. It is a hardy species, and in a suitable aviary will live out of doors all the year round. In a cage the temperature of any room will be ample if it is protected from draught.

Java Sparrows.—One of my birds is very much puffed and mopy, the other is quite well. How shall I treat?—D. BOWERS.

I do not think you need catch the bird up if it is an outdoor aviary, but you must see that it gets a drink of water that has been made saline with Epsom salts; this should be sufficient to meet the case as you describe it. Diet: Canary, white and spray millet, rice in the husk, and a few oats occasionally, green food, grit, cuttlefish, and water ad lib. for drinking and bathing. If it does not improve, catch it up and keep it separate from the others. If it is panting or breathing heavily, you had better write again giving full details. Half a teaspoonful of a mixture of glycerine, oxymel of squills, and ipecacuanha wine, in equal parts, to two tablespoonsful of water, should help you over any difficulty with it.

Grey Parrot (A. B.).—To your present diet add ripe fruit (grapes, orange, banana, etc.), plain biscuit, nuts, green food, grit, cuttlefish, and water. Make its drinking water for one day only quite saline with Epsom salts; follow this by making it the colour of pale port with Parrish's chemical food, and continue this for a time. The bird's bowels should move freely; if excreta should become hard, you had better repeat the Epsom salts, as necessary; but its bowels must not be loose. Give supply of seed mixture each morning, and then, unless hopper is empty, do not replenish till next day. Do not give tea, coffee, or milk slops, table scraps, or any kind of animal food whatever. Keep it warm and quiet. If it has been accustomed to have food with you, give it a dry crust of household bread, or a crust of dry toast will do no harm; but you must not give buttered food, etc.

Cutting Parrot's Tongue (Earlsfield).—It is a most barbarous practice, and does not help the case at all, and more often than not kills the bird. Some individuals articulate more clearly than others, but yours will improve with time. Also train it by constant repetition of such words as you want it to learn; also indulge in conversation in its vicinity, and you will find it will pick up many words or short sentences. On the other hand, it must be admitted that some individuals of free talking species do little more than repeat an odd word or two, but cutting the poor creatures' tongues would not improve matters.

Java Sparrows with British Birds (E. N.).—If not crowded all the birds you name should be safe together, the one risky individual being the Chaffinch. If the small aviary you are starting is a Crystal Palace aviary cage, then I should advise you to keep the Javas separate; the others should do fairly well together. But I should advise caging the Chaffinch up separately. Most birds kept for singing purposes are best caged separately, but you had better repeat this portion of your query to our Mr. G. E. Weston.

Rose Cockatoo Sick, Etc. (F. J. H.).—The bird has somebow got hold of something which has disagreed with it. The lettuce leaf, if it was fresh and clean, would not be responsible for its condition. Keep it warm, quiet, and give it 10 to 12 drops of tasteless castor oil on a piece of bread, sponge cake, or something similar. If you cannot so give it, you must give it direct to the mouth by means of a quill. If it is weak give it two or three drops of brandy in a little water, at such times as it appears weakest. For the next month keep its drinking water just coloured with Parrish's chemical food, using a crock or glass drinking vessel while so doing. Your particulars tell me but little, but your bird has either got a very severe chill, or something very unwholesome with its diet, and I fear you will lose it. If you can add any further details, will try and give further help.

What Bird? (M.V.C.).—If you will give me a fairly full description of the bird, I shall have pleasure in naming it for you. No bird is known at the London Zoo under the name you quote.

Outdoor Aviary.—In an aviary, 12 ft. by 7 ft., could I with safety enclose some flowering currant bushes? Pair of Cockatiels in small cage; the hen plucks the male. Will she continue to do so if I put them in the aviary?—SUTTON MILL.

I am rather doubtful about the flowering currant bushes; very many ornamental flowering shrubs, lilac, laburnum, syringa, etc., are poisonous. As the season is suitable for transplanting, I should advise you to remove them, and substitute for them box, privet, wild clematis (traveller's joy), red or black currants, and sow the ground with grass, oats, canary, etc. It frequently happens that birds kept in a confined space pluck one another for want of occupation. In the aviary this should soon cease; but I am afraid they will keep your bushes well pruned. If you are contemplating putting Finches, etc., in your aviary, do not have any Budgerigars or Lovebirds; the Cockatiels are harmless, but Budgerigars work havoc sooner or later. Note other replies.

Golden-breasted Waxbills.—(1) What is the average price for newly-imported birds? (2) Are they hard to acclimatise? (3) What is their diet? (4) What kind of cage and temperature must they be kept in? (5) What are the principal points to look for in buying?—WELLWISHER OF "C.B."

(1) 2/6 to 3/6 per pair, according as they are plentiful or otherwise. (2) No; the chief difficulty being with tainted specimens. These nearly always die off; otherwise they soon pick up, and are hardy and enduring mites of beauty. (3) Canary, white and spray millet, green food, grit, cuttlefish, and water for drinking and bathing. In the summer, when plant lice (green fly, etc.) are abundant, these charming creatures should certainly get a good supply of them. In the winter a few ants' eggs, and a little slightly damped sponge cake are appreciated. (4) A box cage 18 by 12 by 16 inches high, with a shell nest, and furnished with branches for perches. New purchases should be put in your warmest room; when they have been over a few weeks the temperature of any ordinary living room will be ample for them. They live in my garden aviary out of doors all the year round. (5) Get a good look at them before they are stirred up, and choose birds rich in colour, sleek in plumage, and also alert and lively.

Budgerigars Evicting One Another from Husks (Burton Pidsea).—Sometimes such mishaps occur, but they are not by any means common. Put up another three or four husks, keeping them as far apart as possible, and there should be no recurrence of the trouble. As soon as your self-assertive female settles down to incubation, she will be too much occupied to bother about her neighbours' affairs, and the others will settle down to breeding, and all should go merrily on.

Outdoor Aviary.—Aviary (S.E.), well sheltered, 12 by 3 by 7 ft. high. Should the extension piece be roofed in? What inexpensive and possible breeding varieties could I procure for same?—W.H.R.

The wire extension piece I should advise you to have with the roof covered with ½ in. mesh wire netting; turf part of it, and sow the remainder with oats, wheat, canary, rape, etc. Zebra (3/6), Ribbon (3/6), Ruficauda (10/-), Pectoral (10/-), Chestnut (10/-), and Yellow-rumped Finches (14/-), Silverbills (3/6), Java Sparrows (2/6), Spice Birds (2/6), Zebra Waxbills (2/6 to 3/6), Bengalese, pied (3/6 to 4/6), white (7/6 to 10/-), Grey and Green Singing Finches (7/6 to 10/-), Diamond Doves (10/- to 15/-) are very handsome, and should do well with you, as should also any of the following:—Bronze Mannikins, Black-headed and Tricolour ditto, Common and Green Avadavats, Grey, St. Helena, and Orange-cheek Waxbills, all 2/6 to 4/6 a pair. The first group contains the more probable breeders. Diet: Canary, white and spray millet, rice in the husk, oats, green food, and a little of some soft food mixture; grit, cuttlefish, and water for drinking and bathing. Note other replies.

Birds for Outdoor Aviary.—What Foreign and British birds (possible breeders) would thrive in an outdoor aviary 8 by 4 by 7 ft. high, roof partly glass? What nesting material, diet, and treatment would they require.—NOVICE.

Try the following pairs; they will make a nice selection, and are all very handsome and easily kept birds:—Goldfinches, Siskins, Bullfinches, Zebra, Ribbon, Saffron, and Ruficauda Finches, Silverbills, Spice Birds, Java Sparrows, and Bengalese. I would advise you not to have more than eight pairs to commence with. Diet: Canary, white and spray millet, summer rape, in separate hoppers, and a mixture of hemp, teazle, linseed, and blue maw seed, a little of which should be scattered on the ground two or three times a week. You must also supply green food, grit, cuttlefish, and water for drinking and bathing. Hay, long grass, and a canary nest bag for nesting material, husk and box nest boxes hung about covered portion, double the number of these to the pairs of birds. The main things to avoid squabbles are plenty of branches for perching accommodation, and a number of food hoppers in various parts of the aviary.

Bishops, Weavers, and Cockatiel.—What is their food and treatment? Will they breed in confinement? What nests do they require, and what food when they have young?—J.H.

Bishops and Weavers require the same treatment, viz., canary, millet (white and spray), oats, green food, a few mealworms or other insects, grit, cuttlefish, and water ad lib. If you were so fortunate as to get young hatched, they would require an unlimited supply of live insects and some good soft food mixture. These birds seldom make any attempt to breed, though they weave numbers of their interesting and curious nests if kept supplied with long grass, hay, etc. They require no nesting receptacle, only branches to weave their nests on. Cockatiels are bardy and free breeding birds, but they mostly do not settle down to breeding till the second year. You must supply a nest box with concave bottom, 10 by 8 in. Diet: Canary, millet, oats, green food, grit, cuttlefish, crushed egg shells, and water ad lib. Cockatiels are amiable, and quite safe with Finches, etc., but do not add Budgerigars to your collection (unless you keep them in another enclosure).

Spratt's
MEDICINES
FOR
Cage Birds.

CANARADYNE, for Asthma and Wheezing, per bottle 6d., 1/-, and 2/6; post paid 7d., 1/1 and 2/8.

RED MITE KILLER, per bottle 6d., 1/- and 2/6; post paid 8d., 1/3 and 3/-.

QUINELLA (Registered), for Inflammation of Stomach, per box 3d., 6d. and 1/-; post paid, 4d., 7d. and 1/1.

CHEMICAL FOOD, per bottle 6d., 1/- and 2/-; post paid 9d., 1/4 and 2/5.

PARROT TONIC, per bottle 6d.; post paid 7½d.

"PENNAKURA," for destroying external parasites and preventing feather-eating in Cage Birds, per bottle 3d.; post paid 4d.

Pamphlet on "Cage Bird Rearing" post free of

Spratt's Patent, LTD
24 and 25, FENCHURCH STREET,
LONDON, E.C.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a reply direct, 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Canary (Castleford).—Your bird showed softening of the liver of long standing and recent congestion of lungs, commonly called "a chill."

Group of Small Foreign Finches (N. F. Dobree).—All these birds have the appearance of having been "frightened to death." They were in high condition, and death came by rupture of blood-vessel of liver and lungs, with effusion of blood on the brain (Apoplexy).

GENERAL.

Answered by the EDITOR.

Paper, etc. (J. C. W.).—Accept our thanks. Will use as space permits.

A Cutting (J. Wood).—Thanks for a most interesting item of news.

Photo (H. Edwards).—Thanks for a very interesting photo, which we shall hope to reproduce as occasion permits.

Support (J. N.).—Thanks for your kindly letter; also for past support and promise of its continuance in the future.

Competition (Young Beginner).—We will give your competition idea our consideration, and adopt it if possible. Thanks for the suggestion.

Concerning Parrots (E. G. Bennet).—We are obliged to you for the notes on Parrots, which we shall hope to publish in due course. Items concerning our hobby are always welcome.

Suggestions (W. Hornby).—Thanks for your further letter. We perused your suggestions with interest, and will adopt them where found practicable. The idea respecting the map we had already decided to carry into effect.

A Welcome List (T. H. Davies).—It is good of you to send us the names and addresses of ten friends to whom we may post specimen copies of our journal. Such thoughtful, practical help we always appreciate. "Go thou and do likewise," we would say unto others.

Society Wanted (W. Munt).—There is the North London C.B.S., Hon. Sec., R. P. Harper, 26, Brighton-rd., Stoke Newington, N. We would refer you, however, to CAGE BIRDS ANNUAL, in which a complete list of societies is to be found, with headquarters, and secretaries names and addresses.

Hybrids (J. W. B. G.).—In due course we shall be issuing such a plate as you describe. We have already brought out plates of Hybrids and Mules, which you will find offered for sale by our Manager in the "Hybrid" column of our advertisement pages.

Egg Cake or Egg Bread (J. S. A.).—You must exercise your own judgment as to whether you feed on egg or not. You are quite correct in assuming that many fanciers still use it. But that is no reason why you yourself should not try a substitute. A recipe for egg cake will be found in our correspondence columns this week.

ECHOES FROM THE CRYSTAL PALACE SHOW.

It is just 21 years ago last Saturday that Mr. T. Heath had a notice posted at the Crystal Palace Bird Show, asking fanciers, willing to assist in forming a Cage Bird Society for London to communicate with him. The result of that notice was the formation of the London Ornithological Society, the forerunner of the present flourishing L.P.O.S. Of old members of the London Ornithological Society we met only a quartette at the Palace Show on Saturday—Messrs. T. Heath, G. Crabb, J. Dobson, and C. A. House.

The Lancashires received special attention from that enthusiastic Southern lover of the breed, Mr. F. J. Green. A printer's error in this section caused considerable merriment: Class 42 read, Yellow Painted Head, Clear or Ticked. Had it occurred among their near neighbours, the Lizards, that printer would have been voted a "knowing cuss."

The action of the secretary of the Green Canary Association in writing to the two Green Canary judges, asking them, in effect, not to disqualify any birds found to carry square-tipped feathers (in accordance with a resolution passed by his club, the G.C.A.) was freely commented upon, and we heard there was every likelihood of the matter being brought before the Cage Bird Union, on the ground that it constituted interference with the judges in the discharge of their duties.

We note one exhibitor had labelled his bird "Weston Model." This opens out a world of possibilities. We shall shortly expect to see "Dewar's Delight," "Payne's Pleaser," "Cook's Copper," and other nappy efforts at birdie nomenclature.

A certain widely-known exhibitor of Mules was girding at certain Scotsmen present for being rather "too clever" chaps. He justified himself by relating this distinctly funny story. At a certain great Scotch show held this season a friend of his claimed a certain winning dark Mulo, and at a considerable price. Just before the Palace Show this friend asked him to wash his exhibits. When he brought them round, this said well-known exhibitor had a look at this Dark Mule, having a bird entered in the same class himself. He told his friend that the latter's bird beat his own easily for colour and polish, though he in turn beat his bird for size. During the wash, however, lo and behold, streams of brownish-coloured water trickled over his fingers, and astonished him not a little. He wound up the story by saying, "Both birds are here to-day. Just go and look which has the most colour and polish now!"

What is to be the outcome of the Green Canary-cum-square feather business? We talked with quite a number of fanciers about it on the Saturday, and whilst all those who have not bred Greens pooh-poohed the idea of the straight-edged feathers being natural, the whole of the Green men said that in every Green breeder's room in Liverpool these square-feathered birds were to be found. Mr. Metcalfe put the matter very tersely and pertinently. He said: "The Green men must either be a lot of rogues banded together in a conspiracy to do wrong, or else they must be the most undeservedly maligned fanciers in existence." He further asked the question: "Is it likely that the whole of the Green Club members are rogues?"

"Lightning and Thunder!" "Fireworks and Rockets!" "A Dis-credited Rump!" "A miserable travesty of justice!" "An Irish Night with the Crested Canary Club!" "Preferential Doings in the Cage Bird Union!" "J.C. on the Warpath!" The above, it was suggested, would have made good "scare" lines for the placards had CAGE BIRDS brought out a special edition on Saturday night.

The annual meeting of the Crested Canary Club had proceeded on very conventional lines until Mr. Rhodes brought forward the motion about the suggested affiliation of the C.C.C. with the Cage Bird Union. In a moment, the twinkling of an eye, we passed from seraphic calm to furious storm. "When the Crested Canary Club goes to the Cage Bird Union, it will be as a Salvage Corps, and not in the position of a vassal." This was one of the remarks which will be handed down to posterity as having fallen from the lips of Mr. J. S. Clarke at the history-making meeting of the Crested Canary Club on Saturday.

Times change and men change with them. A few years since Mr. J. S. Clarke was busily engaged with an organisation having the same objects as the C.B.U., and Mr. J. W. Ramsden was then, according to Mr. Clarke, in the iconoclastic mood. To-day the tables are turned. Mr. Ramsden is prominently indentified with a "governing body" in the Fancy, but Mr. J. S. Clarke will have none of it.

Was it a question of men, or methods? queried Mr. Rhodes. "Jealousy is the bane of the Fanc in London, and it only needs a member of one of the leading clubs to advance a proposition for somcone connected with another to do his best to pull it to pieces, and if one society supports any movement the others immediately oppose it." Thus spoke the well-known chairman of the Nottingham Society.

Mr. J. S. Clarke maintains that he approves of the principles of the Cage Bird Union, but avers that it is worked on wrong lines, and hence he will have none of it. In endeavouring to combat Mr. Clarke's attacks, Mr. Rhodes declared that as nothing in the world was perfect, perfection could not be expected in the C.B. Union. Its most infatuated adherents, he said, did not claim that it was. He declared such a body was undoubtedly needed, and said it needed men of force and power to keep it going on good lines. Would it not be better to mend than end?

The resignation of Messrs. Clarke and Greeves, after the declaration of the voto on Saturday, fell like a thunderbolt amongst the members of the C.C.C. But greater still was the surprise at the close of the meeting. Mr. President Crisp and Mr. Secretary Tyson both announced their intention of doing the same thing. What is to be the upshot of it all, we wonder?

Judges' Opinions.

(Continued.)

MR. J. DOBSON.

The Limit classes contained some birds of very good value for money, and I am not surprised to find may of them with "sold" tickets on their cages. There are some fine Norwich, first and second cocks, a buff and a yellow respectively, being very cheap, whilst the hen class, though not quite so well-filled, has a few more than useful ones in it. The Crests and Crestbreds have some rare cheap stuff amongst them, the winning Crest being particularly good, though not very well staged. The winning C.B. had feather which turned back well over the beak. The Yorkshires and the Pair Class drew heavy entries, and sorting them out was not easy. The winning buff Yorkie, though a shade small, is a fine one for position and quality, and soon found a claimant. The class confined to employees of the Crystal Palace Company had some pleasing birds in it, the leader being a fine Missel Thrush. One or two could have been improved in the staging.—J. DOBSON.

MR. S. COOK.

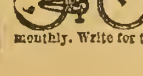
In conversation with a representative, Mr. Cook said he had found the quality in his classes well up to the average, and in several he had had no easy task to select his winners. The Siskins were a particularly good class, all in the cards being good specimens. The winning Bramblefinch he considered an exceptionally fine bird, both for size, colour and markings, and staged in very nice condition. The first prize Greenfinch stands out, and is a beauty all round, and a bad one to beat. I have seen better Nightingales and Blackcaps than some in the class to-day, though one or two of the latter were very good. The Lark, or Pipit class is fine, both in quality and numbers, and I am pleased to see such a nice lot of these birds brought together. In the Insectivorous classes some really pretty exhibits appear, and one or two rare ones, while most are staged in a pleasing manner, and are in nice order. The Tree Creeper is very fine, and I have never seen one in better condition. In the Migratory classes, I had one of the best Great Grey Shrikes I have seen for a number of years—very tame and in good plumage. A Nutcracker also appeared in this class, but I did not accept it as a British bird, it not being on the British Bird and Mule Club list, by which I went in making the awards. Taking the classes all round, Mr. Cook considered this section a good and attractive one, though the Insectivorous classes had sustained a great blow by the unfortunate happening to Mr. Maxwelll's team.

MR. J. F. HILLS.

That Mr. Hills, the veteran among British Bird judges, had found some "hot stuff" amongst his section, was made evident by a few words he had with a representative of ours. The Hawfinch class, which opened his programme, was a stinger, and Mr. Hills was heard to remark that he had a dozen first-prize winners in it. A better class has rarely, if ever, been seen at the Palace. The Buntings were a grand and varied collection, one of the best in point of numbers ever drawn together here. There is no bird Mr. Hill likes better than a Song Thrush, and he was very pleased with the exhibits in this class. He remarked that he generally had a good entry of "speckled beauties," when a class was made where he was judging. The Blackbirds and Starlings were also a very good lot, the winning Blackie being a gem. The leading Chough Mr. Hills also considers an exceptionally fine specimen, and the bird has a splendid winning record behind it; the Magpies and Jays in the same class, were also well above the average in point of merit. With his winner in the Albino class, the charming white Bullfinch, Mr. Hills was head over heels in love, like many another fancier, and he thought it one of the most attractive specimens ever seen on the show bench. The hen Britishers were also a very good lot, many of them in condition being quite the equal of the cocks, showing that fanciers took as much care over getting them into condition.

MR. A. RETTICH.

Frankly speaking, I am not quite pleased with the Roller Canary section, my disappointment being chiefly in the young bird (bred 1906) class. That there should be only seven entries therein is not good, nor encouraging to the show management to cater for young birds, and I think it would be a great pity if it was decided to cut them out. Why they should come in such poor numbers I am at a loss to understand, especially seeing that a similar class at the recent Walthamstow show drew some forty birds to compete in it. The quality of the song of the British-bred Rollers is certainly showing improvement. The open class was a good one, with 29 birds in it, and some very nice singing was heard. The price limit class was also well filled. But neither can altogether make up for the poor gathering of the young birds. I hope they will turn up better in the future.—A. RETTICH.

5/- M'thly. SENT ON APPROVAL. FREE


on Rails Norwich. Send no deposit. Special Offer. A high grade Cycle for cash, £4 10s. Victory's, Swift's, Singer's, Premier's, Centaur's, Triumph's, Rudge-Whitworth's, Humber's, etc., £2 10s. to £8 10s. and from 5s. monthly. Write for terms. Derehamroad Cycle Co., Norwich.

THE SHOWS.

LEIGH AND DIS. C.B.S.

A very interesting pair show for members was held on the 19th February at Railway Hotel, when a fair number of pairs were set down. The principal winners were Messrs. J. Marsh, S. Lycett, and W. Ordish. Mr. R. Davies placed the cards.—A. PARKS, Sec.

HARROGATE C.B.S.

Monthly Show, February 18th, when the classes provided were for pairs matched for breeding. Messrs. J. W. Barrett and W. Brown acted as judges, and their awards were very satisfactory to all. They were as follows:—YORKS.: 1, Barnwell; 2, 3, Head; res., Walker; vhc, he, Barnwell; c, Bennison. CINN. MKD.: 1, Barnwell; 2, Bennison; 3, Gregg. NOR.: 1, 2, Barnwell; 3, Head. The results of the monthly shows for the season were:—1, cup, G. H. Barnwell, 58 points; 2, timepiece, T. Head, 47 points; 3, plated jam dish, T. Bennison, 29 points.—G. H. BARNWELL, hon. sec.

BIRKENHEAD C.F.A.

British birds and pair show, Feb. 19th, Temperance Hall, 97, Chester-street. Nineteen members entered 71 exhibits. The class for Yorkshire pairs came out very well, 20 entries. Mr. Burns judged Canaries, and Mr. Mallinson British, and their awards gave satisfaction. GOLDFINCH (5): 1, Coventry; 2, Richardson; 3, Morton; vhc, Harding; he, Gardner. LINNET (5): 1, Whittington; 2, Coventry; 3, vhc, Richardson; he, Gardner. BULLFINCH (2): 1, Frost; 2, Coventry. BRAMBLE OR CHAFFINCH (3): 1, Burns; 2, Harding; 3, Richardson. A.V. HARDBILL (2): 1, Burns; 2, Richardson. WILD CAUGHT LINNET (6): 1, Harding; 2, Nichols; 3, Richardson; vhc, Frost; he, Whittington; c, Gardner. CANARIES, CRESTS (pair) (4): 1, 2, 3, Mrs. Simpson; vhc, H. Hawkes. YORKSHIRE (pairs) (20): 1, Gardner; 2, vhc, Harding; 3, Moss; he, Nichols; c, Mortou. YORKS. GREENS (pair) (6): 1, c, Moss; 2, 3, he, F. Hawkes; vhc, Gardner. NORWICH (pairs) (7): 1, Lewis; 2, Dalzell; 3, vhc, he, Porter; c, F. Hawkes. NORWICH GREENS (pairs) (2): 1, 2, F. Hawkes. A.O.V. CANARIES OR MULING PAIRS (8): 1, Watson; 2. Coventry; 3, vhc, he, c, Lloyd.—J. T. HARDING, Sec.

CARDIFF C.B.S.

Members' Pair Show, held at the Royal Stores, February 27th. One hundred and fifteen entries were staged, being about the same number as last year, but the quality was far superior to any of the previous shows, and great satisfaction was expressed by the visitors, some of whom had travelled a distance. The awards were made by Messrs. F. D. Jones, R. Waters, and T. H. Melhuish, to whom a hearty vote of thanks was accorded at the close of the Show. YELL. NOR. COCK and BUFF HEN: 1, spl, vhc, Dummett; 2, 3, Thomas; 4, Harrington; he, Lewis and Dymond; c, Dallimore. BUFF COCK: 1, Dummett; 2, Dallimore; 3, 4, Thomas; vhc, c, Gardner; he. Lewis and Dymond. NOVICE: 1, 2, Chedgey. CRESTS: 1, spl, 2, 3, Lewis and Dymond. YELL. YORKS. COCK AND BUFF HEN: 1, spl, c, Smith; 2, vhc, c, Banks; 3, 4, Fellows and Flyn. BUFF COCK: 1, spl, Banks; 2, 4, he, Smith; 3, c, Fellows and Flyn; vhc, Owen. NOVICE: 1, 3, Phillips; 2, Harrington; 4, Weeks. CANARY MULING: 1, 3, Banks; 2, Shellam; 4, Lewis and Dymond; vhc, Harrington; he, Saunpson and Exton; c, Fellows and Flyn. BRITISH MULING: 1, 2, 3, Sampson and Exton. DARK CANARY MULE: 1, 2, Lewis and Dymond; 3, Jones; 4, Harrington; vhc, Pearce. A.O.V. MULE: 1, 2, Shellam; 3, Lewis and Dymond; 4, Harrington. GOLDFINCH: 1, 2, 3, Lewis and Dymond; 4, Banks. GREYPATE: 1, 3, Lewis and Dymond; 2, Ford; 4, Gardner; vhc, c, Miss N. Flyn; he, Banks. BULLFINCH: 1, 2, Banks; 3, Pearce; 4, Thorne; vhc, c, Lewis and Dymond; he, Harrington. SISKIN, ETC.: 1, vhc, Jones; 2, Lewis and Dymond; 3, Dallimore; 4, Pearce; he, c, Sampson and Exton. A.O.V. FINCH: 1, Ford; 2, Pearce; 3, Jones; 4, Lewis and Dymond; vhc, Miss Flyn; he, Thorne; c, Pearce. A.O.V. SMALL: 1, Ford; 2, Thorne; 3, Sampson and Exton. LARGE: 1, Lewis and Dymond. FOREIGN: 1, 2, 3, 4, Thorne. Specials for most points and entries were won by Messrs. Lewis and Dymond.

CRESWELL.

The Creswell and District Cage Bird Fanciers' Society held their annual show at the Rose and Crown Inn, February 23rd. The room is a grand one for a cage bird show, being large, with plenty of light and free from draught. The show was a very nice one, and some grand birds were staged. Mr. J. Driver judged, and he gave general satisfaction. The judging was over, and show open in good time. NORWICH (6): 1, 2, Leam and Stinson, first yellow, ticked eye and wing, grand type, quality and colour, nicely staged, second clear buff, grand size, full of colour, nice quality, good wing carriage; 3, Doxey and Bownes, unflighted yellow ticked, nice type, quality, and colour, but not the substance of the leaders; vhc, Doxey and Bownes, unflighted buff, a bird I liked very much, nice and cobby, with good head and neck, splendid size quality and colour; he, Knott. HEN (5): 1, Pearson Bros., unflighted yellow, good size, colour and quality, but rather long sided; 2nd, vhc, Doxey and Bownes, clear buff, good size and colour, lacking in quality; 3, Wilson, clear buff, grand type, lacking in colour; he, Leam and Stinson. YORK. (13): 1, 2, Wilsou, first yellow, plenty of length and colour, second clear buff, good style, quality and colour, rather short; 3, Knowles, clear buff, good length, quality, and colour, and as straight as a dart; vhc, c, Simpson; he, Presley. HEN (10): 1, vhc, Simpson, clear yellow, good length, nice quality and colour, grand style, a good win; 2, 3, Knott, second buff marked, nice length, very good quality and style; 3 yell., nice stylish hen; he, c, Knowles; another good class. CRESTS (2): 1, Simpson, buff variegated dark Crest, nice veiny Crest of medium size, with good centre; 2, Presley, not so large in Crest or so well put down. CRESTBRED (3): 1, Doxey and Bownes, grand buff variegated, good size, rare head, plenty of feather of good quality, wins; 2, 3, Simpson, clear buff, good, but beaten in size. N.C. CANARY (8): 1, Doxey and Bownes, buff marked Norwich, very chubby, good head and neck, grand quality of feather; 2, 3, Simpson, four-pointed buff Yorkshire, good markings, nice length and quality; vhc, Metcalf; he, Drabble; c, Baxby. YORKS PAIRS (6): 1, Drabble, yellow cock and buff hen, nice length, good style and quality; 2, Wilson, good buff marked cock and yellow hen; 3, Presley, yellow cock and buff hen, very nice; vhc, Presley; he, Simpson; c, Knott. NOR. (4): 1, Doxey and Bownes, yell. cock and good buff marked hen, both good type; 2, Till, yell. marked cock and buff hen, nicely matched; 3, vhc, Doxey and Bowues, buff cock and yellow marked hen, both good. CRESTS (5): 1, 2, vhc, Hooton, first green Crestbred cock with good length of head feather, and a clear body, dark Crested hen, very nice pair; second buff marked dark Crested cock and buff hen, rather small in head; 3, Doxey and Bownes, buff marked Crestbred cock, a grand bird, and dark Crested hen; he, Baxby. A.O.V. (2): 1, 2, Leam and Stinson, two grand pairs of Cinnamons. MULE BREEDING (4): 1, Drabble, Greenfinch cock, and very nice buff hen; 2, Leam and Stinson, Siskin cock, and yell. hen, look like breeding a good Mule; 3, Doxey and Bownes, Goldfinch cock and buff hen. Mr. Pitt got a good pair we, the Finch being a foreigner. HYB. BREEDING (two British Finches) (5): 1, 2, Presley, both Greenfinch cock and Bullfinch hen, well matched pairs; 3, vhc, Pearson Bros., Goldfinch cock and Bullfinch hen, and Linnet cock and Goldfinch hen. MULE OR HYB. (3): 1, 2, 3, Leam and Stinson, first noted four-pointed buff Goldfinch Mule, looking well; 2, good dark yellow Linnet Mule; 3, dark yellow Siskin Mule, three grand exhibits. BRIT. HARDBILL (10): 1, 2, Pitt, first grand Bullfinch, second good Hawfinch, nice colour and very steady; 3, Pearson Bros., good Snow Bunting; vhc, he, Bromley; c, Knott. SOFT BILL (3): 1, 2, 3, Pearson Bros., first noted Nightingale, in grand form, second good Lesser Whitethroat, third yellow Wagtail, looking soft. SMALL FOR. (3): 1, Pearson Bros.; 2, 3, Drabble. LARGE (2): 1, Shelton; 2, Leam and Stinson. GIFT (2): 1, Doxey and Bownes; 2, Drabble.

THE GLASGOW AND WESTERN COUNTIES C.M.B. AND F.B.C.

First Club Show, in the Mechanics' Hall, Ingram-street. There was a fair turn out of birds, the classes being fairly represented. The quality was also good. There was a large muster of members. Mr. Pettigrew occupied the chair. Messrs. George Marlin and W. Connelly were appointed trustees. The following classes were decided upon for show at next meeting, March 30th, at 7 p.m.:—Linnet, Goldfinch British, Siskin, Redpoll or Twite, Goldfinch Foreign. Numerous specials will be competed for, also novice judging competition for two prizes. The following gentlemen adjudicated: Messrs. Park, Edwards, Rodie, and John Young. Proposed for membership: Messrs. J. M. Edwards (Glasgow), Jas. Lamb (Holytown), A. Park (Glasgow), Alex. McInnes (Glasgow), A. Roberts (Thornliebank), Thos. Thomson (Glasgow), J. Park (Glasgow), Jas. McMillan (Glasgow), W. Connelly (Glasgow). Judges were accorded a vote of thanks, while a similar compliment was paid Mr. Peter Pettigrew for presiding. Any fanciers desirous of becoming members can have particulars from the Sec., Mr. J. H. Adam, 15, Alexander-street, Sandyford, Glasgow. Show results: —NOR. PLAINHEAD PAIRS (30): 1, spl, Shearer; 2, McFarlane; 3, spl, Herbert; 4, Marlin; vhc, Malcolmson; he, Connelley; c, Roulstone. BOR. PAIRS (14): 1, Marlin; 2, 3, McKenzie; 4, Erskin; vhc, Renfrew; he, Roulstone; c, Gillies. MULING PAIRS (25): 1, McFarlane, Goldfinch and Canary; 2, Marlin, Linnet and Canary; 3, spl, Renfrew, Canary and Bullfinch; 4, Erskin, Redpoll and Canary; vhc, W. Shearer; he, Roulstone; c, Gillies. HYBRID PAIRS (24): 1, spl, Malcolmson, Goldfinch and Bullfinch; 2, Brownlie, Goldfinch and Siskin; 3, Marlin, Siskin and Greenfinch; 4, Connelley, Linnet and Bullfinch; vhc, Renfrew; he, Gadsdeu; c, McAlpine. A.O.V. (10): 1, McMillan, Yorkshires; 2, Renfrew, Cinnamons; 3, Adam, Lizards; 4, Gadsden, Lancashires; vhc, Johnstone; he, Morrison; c, Hodson.

WAKEFIELD.

First exhibition of Canaries, British and Foreign birds, Feb. 12th. Taking into account the fact that the show was for members only, the quality of exhibits was superb. The Victoria Cafe, opposite the Cathedral, provided a most cosy room for the occasion, being of nice light, warm and absolutely free from draughts. The birds were well staged, and the management was excellent. Mr. S. Sheard, one of the vice-Presidents, presented a valuable silver cup for most points gained, to be won three times in all previous to becoming the absolute property of the winner. Messrs. Blackburn and Netherwood, the worthy Secretaries, deserve the greatest praise. Mr. J. C. Barnes (Sheffield) adjudicated.

YORK., YELL. COCK: 1, Bardon; 2, Mrs. Ingham; 3, Oldroyd; vhc, Parkes; he, Parker. BUFF: 1, Ingham; 2, Bardon; 3, Talbot; vhc, Parkes; he, Oldroyd; c, Parker. YELL. HEN: 1, Parkes; 2, Parker; 3, Oldroyd; vhc, Bardon. BUFF: 1, Ingham; 2, Parker. PAIRS: 1, Rothwell; 2, 3, Hinley; vhc, Parker. NOR.: 1, 3, Midgley; 2, Blackburn. HEN: 1, Parkes; 2, Blackburn. LINNET: 1, Rothwell; 2, Walker; 3, Horridge; vhc, Atkinson; he, Isherwood; c, Brown. REDPOLL, ETC.: 1, Blackburn; 2, Atkinson. GOLDFINCH, ETC.: 1, Horridge 2, Keeley and Righton; 3, Atkinson; vhc, he, Netherwood. GREENFINCH, ETC.: 1, Keeley and Righton; 2, Isherwood. SOFTBILL, SMALL: 1, Meadow; 2, Keeley and Righton. A.O.V.: 1, Isherwood; 2, Keeley and Righton. FOR. LARGE: 1, Horridge; 2, Hinley. SMALL: 1, Hinley; 2, 3, he, Sheard; vhc, Meadows.

MICE
IN THE BIRD ROOM.
Rats, Mice, Field Mice, &c.,
EXTERMINATED BY DANYSZ VIRUS
Discovered and Prepared by
Dr. DANYSZ of the Pasteur Institute, Paris.
When affected with the Virus the Vermin leave their usual haunts and die in the open. The remedy is harmless to other animals and human beings and may be used everywhere with absolute safety.
For MICE only, 1/- per tube.
RATS & MICE, 2/6 ,,
Post free with full Particulars and Testimonials from
DANYSZ VIRUS Ltd. (Box 74)
52, Leadenhall St., London, E.C.

A C.B.S. FOR RUTHERGLEN AND DISTRICT.

SIR,—An Ornithological Association has been formed for Rutherglen and District. The following gentlemen have been appointed as office bearers:—Honorary President, Provost Joseph Johnstone; President, William Moffat, M.A.; Vice-President, John Manson, L.D.S.; Secretary and Treasurer, FRANK WILSON, 5, Jedburgh Avenue, Rutherglen.

MORE EARLY MULES.

SIR,—On the 23rd February I read a few lines about "Early Mules." I have a Goldfinch and a hen Canary with two young ones, which hatched on the 23rd February, and are doing well. The hen Canary laid three eggs, and hatched two. I put them together on New Year's Day. They have been together ever since, for I did not take the Goldfinch away as some would do, but let him remain with the hen all the time she was building, laying, and sitting, and now while feeding the young. I think this is a record for this time of the year in early Mules. They can be seen any time.—RICHARD ELLIS (Mansfield).

DOUBLE YELLOWING AND DOUBLE BUFFING.

Can Yellows be Bred from two Buffs?

SIR,—I saw in last week's "C.B." readers gave their experiences of double yellowing and double buffing. My experience of double yellowing is that you get yellows and buffs, just the same as if you put buff and yellow together. Now, last year (1906) I put two yellows together, and the result was four buffs and three yellows. But the yellows so bred are always very skimpy and scanty in feather, and very light-boned. I also tried it a few years ago with the same results. What I'd like to know from fanciers is, Do they get more hens than cocks from double yellowing? In my case they were mostly all hens.—J.A.

EGG CAKE.

A Tried and Successful Recipe.

SIR,—I am forwarding to you a sample of egg-cake. The recipe for it I took from your valuable journal, CAGE BIRDS, three years ago, and I am glad to tell you I have found it very useful all the year round ever since. I give it to my birds during the cold weather, and find them do well on it. I advise Mr. H. Pettit to give it a trial if he wants a change; he will never repent it. I also find it very useful in getting my young birds from soft food on to seed. I have had some of my hens prefer it to feed their young with to the usual egg and egg food. Last (but not least), I wish to thank you for such treats you gave fanciers in the Birthday and Crystal Palace Numbers. I also wish the "Bird World" the same success as CAGE BIRDS.—R. E. PARRY.

[Our correspondent's sample of egg-bread looks and tastes very good indeed. For the benefit of readers, we here reprint the recipe, which was originally given in our columns by that old and esteemed fancier and breeder, Mr. John Haigh (Messrs. Haigh and Son), Bradford, whose experience extends almost to half-a-century. Recipe: 8 eggs, 4 oz. sugar, 4 oz. melted mutton suet, 1 lb. flour, ½ oz. baking powder. Beat the eggs well, and add the sugar. Rub the melted suet well into the flour, after you have added the baking powder. Mix all well into one loaf, and bake same in a very slow oven. It will keep good for three months. At moulting time simply add the colour-food—ED. "C.B."]

BORDERS VERSUS COLOUR.

SIR,—I read with more than ordinary interest the letter of Mr. James Forsyth in your issue of February 9th, on the above subject, and quite agree with him respecting the disappointing entry in the Border section at some of our shows this last season. It is evident that there must be something wrong somewhere. But Mr. F. thinks the colour question causes it; I am afraid he is a quiet advocate of colour feeding. Now please, Mr. F., leave this colour feeding where it is, as I do not believe in this being the real cause of short entries in Border classes. It is true that there are few fed birds to be seen on the show bench, but as this question is a settled thing by both Border Clubs, it entirely rests with our judges, and also exhibitors themselves when visiting shows, to speak up when they see prizes given to colour fed birds, especially if the show is under the patronage of the Border Clubs. I well remember that at a certain show this season, not many miles from this town (Swansea), the judge spotted one that had been too near the colour pot. He told me after the show that it would have won had it not been colour fed. I daresay that exhibitor will be more careful in future. If we had a few more judges of this sort, we should soon see our Border classes minus the fed birds, as he told me that they do not get into tickets with him. I really hope that those few fanciers in Mr. Forsyth's neighbourhood will have courage enough next season to send their birds out in their non-colour fed condition, as it will strengthen the hands of those who do exhibit honestly, and assist the shows which are giving Border classes at present to extend their classification; also encourage other show committees, which do not provide Border classes, to do so. There is one point in Mr. J. B. Moore's letter in your last issue which I fully endorse, and that is that show committees are to some extent to blame in their selection of judges. There is no denying the fact that if the same judge is appointed to judge three or four different shows within a limited distance, only those who won at the first two shows exhibit under him at the other shows. So societies ought to be extra careful in their selection, and should ascertain who judged those shows held previous to theirs, at the same time seeing that they get competent men to do the work. But both gentlemen have, to my mind, not touched the real cause of these short entries, which has been plainer to me this season than ever. It is: "The variation in show cages." This, to my mind, is the evil thing. It is very discouraging to the young hands to find at the shows where they exhibit, some of the more wide-awake ones with their ornamental cages, and also fancy perches. Very often they give up in despair, having only just perhaps bought a set of new show cages of the ordinary style. I sincerely hope that the English and Welsh Border Club in particular (if not also the Scottish Club) before another season comes round will adopt a uniform cage and also uniform perches. And if the Border Canary is to still gain ground, it is my firm belief these must be adopted. In conclusion, I wish to say that I am not writing this as a disappointed exhibitor, as I have always been able to win prizes at every show I have exhibited at during the last four of five years, from the Crystal Palace downwards, but in the interests of our little gems, and also fair play. As I do not wish a cheap advert., I will sign myself.—NON-COLOUR-FED.

A PROLIFIC LAYER OF EGGS.

SIR,—Noticing records of early young birds, etc., in your columns, I thought the following item, which appeared in a local paper, would be of interest. The writer, a Mr. W. B. Proctor, of Newcastle said:—"I want to bring the following what I consider extraordinary circumstance, in bird life, to your notice, and ask you if you have heard of such unusual prolificness. I have an ordinary buff Canary hen, and during the season of 1905 she was paired to a Canary cock and had three nests, four eggs each time. In the winter, the cock died; so in May, 1906, I paired the hen with a cock Brown Linnet. She had two nests, four eggs each; none hatched; and about the end of July two more eggs, which she sat on and hatched. In September, I put the Linnet, the hen Canary, and the young Mules, into a large flight cage beside some half-dozen Foreign birds. Between then and the end of the year she laid twice more in a cocoanut shell, each time four eggs, the last late in December. That totals from May to December five nests, containing eighteen eggs, four fours and one two; and now last Friday (February 1st) she commenced to lay again, and at this moment is sitting in her cocoa-nut nest in the flight cage on four eggs. I would like to know if this is phenomenal, or have you heard of a similar case?"—W. B. DUNNE.

A CONUNDRUM OF THE PALACE SHOW.

SIR,—In reply to our friend, Mr. Howes, who has so courageously taken up the cudgels for his "young friend," Mr. Osborne, the owner and exhibitor of the Redpoll that stood second at the last Palace Show, I fancy he has taken my letter in a far different light from which I meant it to be read. Mine was a purely friendly motive, on the subject of colour and non-colour feeding, in the hope of raising a friendly discussion, so that we ignorant and unexperienced juniors might benefit. Seeing by his letter that Mr. Howes is no "dud" at the game of colour-feeding, I feel sure an article from him would be very interesting to readers. There may be a secret he knows which would enable me to show my Redpoll in the Norwich or Yorkshire class, and then say, with pure conviction, that it had never tasted colour food or seen a Canary. Since Mr. Howes "presumed," I also beg to presume that he may have sold the Redpoll to his young friend; and I may put the matter re tempting offers to rest by saying that I am not in the position to offer his young friend that untold wealth which was turned away as chaff before the wind. Neither am I a "screaming, disappointed, out-of-the-money exhibitor." So let us put this feeling on one side, and discuss the point, "When is a British bird not a British bird?" My answer is, "When it is proved to be colour-fed." I hope to be, with all readers of CAGE BIRDS, a friendly fellow fancier, and not, as Mr. Howes would make me out to be, a disappointed exhibitor.—H. J. HAWES ("Querist.").

HOW TO MAKE LIGHT BUNS.

By using Eiffel Tower Bun Flour the most inexperienced person can make *light* Buns and Cakes with certain success. Try a 1d. packet. Save Eiffel Tower Labels for 1/6 picture free.

A SMALL GARDEN AVIARY WANTED.

SIR,—Would some reader of CAGE BIRDS be good enough to give me a few hints on making a small garden aviary? I want it to stand against a wall, and be in size about 6 ft. by 3 ft. by 2 ft. I might state that through articles in "C.B." I have been able to make my cages entirely myself. It is with eager haste I call at my newsagents on Friday for my copy.—J. H. BARRETT.

DO BIRDS GET INTOXICATED?

SIR,—As I keep a few birds, and always take an interest in British birds, I am in the habit of feeding them from the kitchen window. There are Thrushes, Starlings, Blackbirds, Robins, Sparrows, Oxeye, Blue and Cole Tits come to have a feed of the suet and cheese that I hang out for them from the side of the window. It is a treat to see them hanging on to the cheese and swinging to and fro in the wind. I thought I would try to intoxicate some of the bigger birds, and watch them. So I soaked some oatcakes with brandy to see how it acted on them. The Thrushes and Starlings ate it up very greedily, and I watched the Thrushes fly from the window to the garden, and then back again to get another feed. They didn't seem to be any the worse off. I thought it would have had some effect on them. I was wondering if any of your readers had ever seen such birds the worse for drink. I trust CAGE BIRDS will always prosper as it is doing, for it is a cheap pennyworth.—H. MORRISON.

[It is a well-known fact that Pigeons, domestic poultry, Ducks, and the like, have been made intoxicated through feeding on brewers' grains, or through being given food soaked in alcohol. Without any wish to appear offensive towards our correspondent, we may express the hope that other readers will not be induced to repeat his experiments; we see little or no object in doing so.—EDITOR.]

INHUMAN BIRD CATCHING IN CORNWALL.

SIR,—I think Mr. Pearce has done the right thing in giving publicity to the above charge, but if he had kept the mode of catching to himself it would have been far better, as it only puts the cruel idea into some other persons' heads who have never heard of such a thing before. Respecting Methodism, I don't see my friend, Mr. Burton, need to go to "those wild Westerners," as he terms them; he can find things equally as bad done around Penryn and Falmouth, especially in the nesting season, and when the young Greypates (Goldfinches) are being caught. I think if schoolmasters would instil into young minds a little more humanity to dumb creatures, we should have less of this brutality.—CORNISHMAN IN WALES.

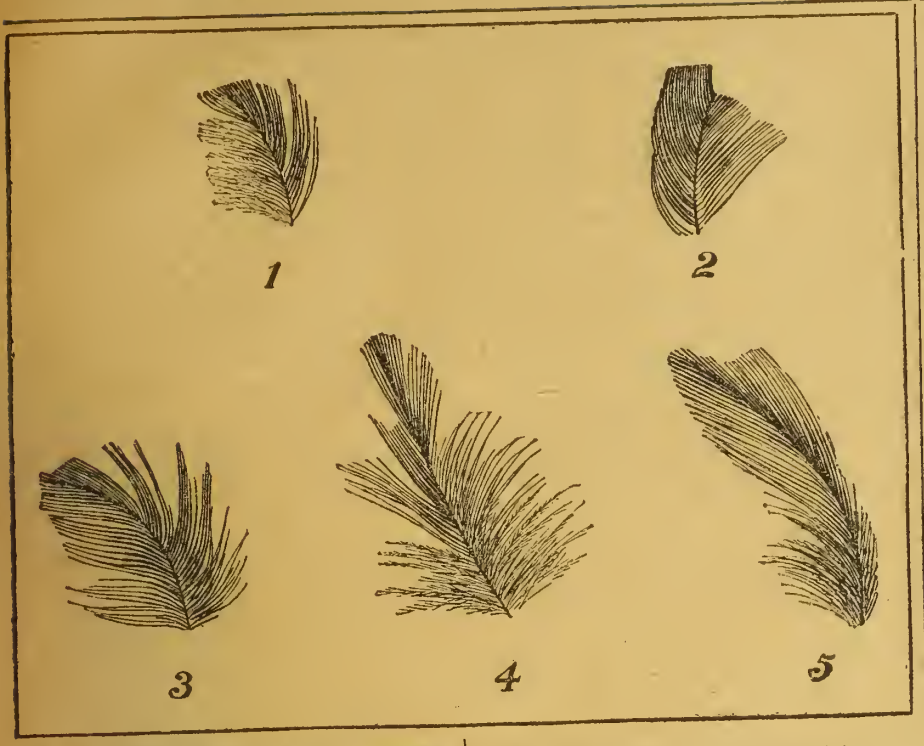
SIR,—I am very pleased that the few lines you were kind enough to insert on Feb. 9th have brought comment on the inhuman bird-catching, but am sorry you mis-spelt my name. Pease is a name quite strange in Cornwall. I am very pleased at Mr. Vaucher's information; I was not aware that Mr. Hudson was at St. Ives; he might have seen my letter, copied from CAGE BIRDS, in our local papers the following week. But Mr. Vancher has taken steps which meet the object of my letter, and I hope to hear some thing more on the matter. You may understand these catchers were trespassers on land where I had no right to interfere. They know better than visit mine; if they did I would summon them for trespass, when I should have a chance to inquire whose duty it was to look into the matter.—WILLIAM PEARCE.

DISADVANTAGES OF THE CLOSED RING.

SIR,—I should like to ask fanciers who are in favour of the closed ring what protection they have by using them, when closed rings can be had with any number or year marked on them? For instance: if a man intends fraud, and his winner is awarded No. 22, he will then ring a whole nest of wasters with rings marked 22, tail and flight them, and pick out the one to be palmed off as the winner (if the winner is registered). The buyer then writes to the secretary asking if 22 has won at such shows as stated; the reply is, "Yes," and the buyer is sold again. It will be asked, "What has become of the other birds marked 22?" The rings are cut off and they are sold in the ordinary way. Of course, the winning bird goes out to the shows again, minus the ring; also if a winner dies the ring can be used again. I should like to know what is the use of having show cages and water pots all alike. It will be said, "To stop fraud"; and yet a bird is put inside with a distinguishing number on its leg. I say there is no protection. Some fanciers say there is no risk in ringing birds; again, I say there is. I have tried ringing them with closed rings and lost a good many. How many hens will allow you to meddle with their young? Some youngsters have to be rung earlier than others, according to their size and breed; then they must be examined to see if the rings have kept on. I have found the hens object to it and stop feeding. I have also found when a hen goes to feed the young ones she has spotted the rings as the youngsters have risen to be fed, and then there is trouble. She sets to work to pull them off, and it is ten to one she will injure the lot. I have found them dead on the bottom of the cage, having been pulled out of the nest. If you manage to ring them, and the hen goes on all right, you will see the youngsters, when they start to perch on the edge of the nest, start pulling away at each other's rings until they are all landed in the bottom of the cage. Then they say there's no risk. The best time to ring youngsters is when they can fly on the perches; they can then get out of each other's way. Another question: What are fanciers going to do with their old birds that are rung with number and year? Who will buy an old bird? No dealer will, nor anyone that wants a songster. Are they to be pensioned off? If not the rings will have to be cut off before they can be sold; that is fraud again.—W. M.

THE LINNET IN CAPTIVITY.

SIR,—I am penning these few remarks in the hope of stimulating the younger fanciers of British birds to greater interest in the common or brown Linnet. Among all our British Hardbills there is, in my opinion, none that will better repay a little care and attention. And it has this to recommend it; besides being inexpensive, it is easily catered for; can be made as tame as most Canaries; will sing the greater part of the year, and, if properly provided for, will live many years in captivity. The above being true, one would expect to find the Linnet a great favourite, and yet in a part of Lanarkshire, where the bird has the reputation of being a good songster, very few caged Linnets are to be seen. True, a few specimens are kept by breeders of Hybrids, but the number who keep the bird for its own intrinsic value is strictly limited. Where one does see a Linnet in the possession of an amateur, it is generally so unsteady and easily frightened that it does not commend itself to the uninitiated as a suitable or interesting pet. I have seen Linnets which had been caged for years almost as unsteady when approached as newly-caught birds. Yet, while I write this, I have before me a bird caught less then three weeks ago, which is not only singing, but seems not the least concerned, although my nose is touching its cage and within a few inches of it. Of course, it will be argued that I have been fortunate in obtaining a naturally fearless bird, and one which readily accommodates itself to new surroundings. There is, perhaps, some truth in this contention, but there is not the slightest doubt in my mind, that this bird, in the hands of many, would be less steady a year from now than it is to-day; and so this Linnet, which gives every promise of being a fine singer, and an interesting pet, would by many be voted a failure, because it never became steady and fearless. I have seen it remarked, I think in CAGE BIRDS, that of all British birds the Linnet is the least likely to take advantage of a loose wire or an open cage door, and one experience of my own helps to confirm the above observation. Being the possessor at one time of a Linnet whose vocal powers did not come up to my expectations, I determined to liberate him, never doubting that Dickie would take advantage of my resolution. Accordingly, the cage was hung outside and the door opened, but its inmate took not the slightest notice of the irregularity. Then some chickweed was placed in such a position that he must leave the cage to get it. He came out, secured the weed, and returned to his perch. Forcible eviction was now all that remained for it, and, I am sorry to confess, I availed myself of this means and drove the bird out. His first flight carried him out of the garden into an adjacent wood, and then I began to think and doubt the wisdom of my action. In less than half an hour I was sure I had not only done wrong, but had also been unkind, and in this penitent mood I hung out a Bullfinch which had been kept in the same room as the evicted Linnet. A few calls from the Bullfinch brought the Linnet back from the wood into the garden, and, seeing his cage, entered and took possession. Perhaps it is unnecessary to say that, despite his musical disability, he was allowed to remain in undisputed possession of the little old green cage which was dearer to him than liberty. The song of the Linnet is said not to be of great compass or power, but the sweetness of it is an ample compensation, and to lovers of birdy music it possesses a charm all its own, a charm for which there is no substitute. I hope these few observations may help to interest others in a bird too little appreciated, and that if they should meet the eye of an amateur who has hitherto been disappointed, he may be encouraged to persevere. —LINNET FANCIER.



THE SQUARE FEATHER CONTROVERSY.

[The above sketches are from feathers kindly sent us by Mr. R. E. Helliwell, whose accompanying letter appeared last week. The feathers numbered 1 and 2, however, have been experimented on by a member of CAGE BIRDS' staff. No. 1 shows a feather cut at the tip by a pair of moderately sharp clippers (nail-clippers). No. 2 shows another feather cut at the tip by a moderately sharp pair of scissors. The latter cut appears very clean and decided, with no filaments (or web) straying over the edge. Feather No. 1, on the other hand, shows that a pair of clippers will leave behind an amount of fibre (web) on the edge of the cut it makes. One of the arguments advanced at the Crystal Palace on the Saturday afternoon in controversion of the judge's decision, was that if a feather be cut (trimmed) no fibre (or web) would be left on the edge of the said cut, whereas on the square-edge of the feathers found on the Greens this web could always be seen.—ED. C.B.]

More Opinions from Liverpool.

My opinion on the square feathers shown between the shoulders on Green birds is "that it is a natural growth." I have found it on birds I bred myself, though not so marked as on others I have seen. I think the defect can be, and is, intensified by in-breeding, it being more noticeable in some strains than others. I have heard it asserted, and have not the slightest doubt of the truth of the assertion, "That there are few Green breeders in Liverpool who have not bred birds with these square feathers." The unanimous decision of the two clubs in Liverpool, containing a great majority of the Green-breeders in the country, "that the square feather is a natural defect," should be far more convincing than the opinion of anyone who has not had their experience. There is a great difference between breeding Greens for a season or two, and breeding Greens for years. I was told at the "Big Show," "That there were square feathers on all varieties, but none showed them up so plain as the Green variety." This, I think, is quite possible, but I have not looked for them on Clears yet, but intend to do so. About the old dispute of years ago, I know nothing. I did not know what a square feather was like (never having noticed them) till the Liverpool November Old Show. But I have seen and heard plenty about them since, and I am firmly convinced *that square feathers are a natural growth.*—H. BARRATT.

A Natural Growth.

My experience is that they are a natural growth, and are caused by a slow or bad moult, which will also be found in the Clear birds as well as Greens.—ROBERT BRATHERTON, Edge Hill.

METHODS OF STRAIGHTENING CAGE WIRES.

SIR,—Your correspondent, W. Williams, should get a piece of wood about three inches thick, and bore a hole through it so that the wire will just pass through. This straightens wire very easily, by pulling the said wire through the hole.—E. MARSHALL.

Sir,—Tell Mr. Williams to put three small staples in his table or bench, triangular fashion, about six inches apart, and enter the wire from one end and pull it through round the triangle, as it were, to the other with a pair of pliers. He will find it perfectly straight after it is drawn out.—C. E. SILK.

[Several methods sent by other correspondents we shall hope to give next week.—ED.]

PROPOSED NEW SOCIETIES.

West Bromwich and Dis.

Sir,—As a fancier of some years' standing, I have often thought a society for West Bromwich would be a pronounced success, seeing the wide radius from which it could draw its support. There are sufficient fanciers in West Bromwich and district to warrant the formation of a society. If Mr. Lewis would make some practical suggestion, he would have the hearty support of GEO. KEY, 30, Kentish-road, Handsworth.

Morriston and Dis. C.B.S.

A large number of cage bird fanciers congregated together on March 2nd at the Woodford-street Coffee Tavern, Morriston, near Swansea, with a view to forming a Cage Bird Society. A few poultry fanciers attended, and who desired to co-operate so as to run a Poultry and cage bird show combined, but the cage bird men deemed it wiser to sever their connection with poultry matters. We hope when the Morriston and District Cage Bird Society is formed to enrol over fifty members, as Morriston and District is studded with fanciers of birds, yet they have not taken a keen interest in the breeding and exhibiting of show specimens, but hope shortly to see some of them making their debut on the show bench. The officials elected pro tem are Chairman, D. M. Powell; Treasurer, G. Poulet; Secretary, D. Jeremy, Tan-y-Lan-road; Morriston Committee: Harding Williams W. R. Morgan, Henry Lewis, J. Hopkins. Warren Bowen, Sam Morgans, Thomas Thomas, P. J. Rees, Howell, J. Davies, Wm. Powell, W. Wilcock, W. H. Lewis, T. Thomas. An adjourned meeting will be held at the above place on Saturday next, March the 9th. when all fanciers interested will be given a most cordial reception. Time of meeting, 7 p.m.—D. JEREMY

BRITISH BIRDS AT THE PALACE SHOW.

SIR,—I am very loth to indulge in anything which may be taken for personalities, but the two letters of Mr. S. W. Birchley really call for some criticism. In the first place, if both letters do not come under the heading of a a "disappointed exhibitor's wail," I fail to see what they are. And if what one reads in the Fancy papers be correct, Mr. B. blames the wrong man when condemning the judge, as it was two to one for the Nutcracker, the minority being the judge who passed it in its class. Then, again, is it to be an acknowledged fact that when Mr. So and So's Creeper wins at one show, it is going to beat the same birds every time they meet? I can only say that Mr. B. was the only one I saw at the Palace and had a chat with, who could not see why his Creeper was beaten. In fact, some of us pointed it out to him, when comparing the two birds. I must say that I think it is not very encouraging to a gentleman like Mr. Mays to have a specimen criticised like this in the papers by anyone who has been on the exhibiting bench about half as many months as he has years. By-the-bye, who reared and steadied the Shrike? I fancy I saw him at the previous Palace Show under another owner's name. I should not have thought them very difficult to keep either, if the raw meat is not overdone. I also heard, while we were looking at yours, Mr. B., of a Great Grey Shrike being picked up in "Club Row," and it did not cost many shillings either—far less than one can get a Creeper for. I expect it will be "warranted a Britisher" by February, 1908! In conclusion, I advise Mr. B. to take a licking like a man, and not try to pose as "The" authority for the N.B.B. and M.C. While writing, I should like to contradict a statement that has been the round of the Fancy papers this season to the effect that the Gold Crest of Mr. Maxwell's was the only one that has been cage-moulted; the owner of the Palace-winning Tree Creeper had moulted an adult before Mr. Maxwell succeeded with his.—SYDNEY L. COCKS.

Sir,—I confess that Mr. Birchley's letter has puzzled me considerably, but as he requests other fanciers opinions on the subject on which he writes so eloquently, may I be permitted to submit mine. Firstly, I do not understand Mr. Birchley's statement that his letter is not "the wail of a disappointed exhibitor." Mr. Birchley seems to be both disappointed at the result of the show and also as an exhibitor. His letter is rather melancholy reading. He states that Mr. Cook's Nutcracker was awarded special prize for the rarest British bird over his Great Grey Shrike. I notice that Mr. Cook's Nutcracker is entered in the "Migratory" Class. Mr. Birchley desires to wager that the Nutcracker was not bred in England. Really, Mr. Birchley, whoever said it was? Do Waxwings, Redwings, Fieldfares, and other northern birds breed in this country as a rule? A few scattered individuals may, but the great majority go north to Norway to nest. So even if the Nutcracker was reared in a Norwegian, German, or Austrian forest, is it not possible that it may have migrated here, thus qualifying it for the Migratory Class? The bird in question appeared to me like the Tyrolese form, but it is quite possible for it to have been caught in England. I consider it my duty to give support to the judge (if he needs any), and may state that I was very pleased to see so fine a specimen of this rare bird exhibited. I must also disagree *in toto* with Mr. Birchley's statement that a Tree Creeper is easier to keep than the Shrike. I have handreared both the Tree Creeper and the Redbacked Shrike, but found the latter comparatively easy to rear, a varied diet being about the only difficulty. If, as Mr. Birchley, says, he "reared" his Shrike, what need was there for steadying him? Birds reared from the nest are not usually very wild. I may add that I sympathise with Mr. Birchley in his disappointment, as his Great Grey Shrike was a very fine specimen of its species, but, in my opinion, outclassed by rarer specimens. I have found two authenticated nests of the Great Grey Shrike in Wiltshire, or, rather, found one and was shown the other. With regard to Mr. Birchley's second letter, he still harps on the same statement, "My bird is British, your's is foreign." He also asks one of the 40,000 readers to recollect any instance of its occurrence in England. (I believe it is unknown in Ireland.) Let Mr. Birchley consult the authorities at the South Kensington Museum, when no doubt he will hear that its occurrence has been reported a good many times. I may also state that I have not the honour of being acquainted with Mr. Birchley, Mr. Cook, or the judge, but merely write this letter "for the good of the Fancy at large."—C. W. WOODHOUSE.

Sir,—I was surprised to find Mr. Birchley excited about my Nutcracker at the Palace. I should have thought it enough for that gentleman to have seen the picture in the last Birthday Number of CAGE BIRDS. As to the award of special for the rarest British bird at the Show, there were three British bird judges, so it must have been two to one that my bird is a rare British bird. I think Mr. Birchley will be surprised to hear that my Nutcracker was caught in Scotland. I have also been to the Natural History Museum and found a specimen of the Nutcracker, which was caught in South Sweden; it also tells us that the Nutcracker is an irregular autumn visitor to Great Britain, and about twenty occurrences have been recorded. I should like to ask Mr. Birchley whom we are to believe, the Museum, CAGE BIRDS, the judges, or the faddists? I think the same as many others, that my Nutcracker is a very rare British bird, and did not get more than it deserved at the Palace Show.—WILLIAM COOK.

RAILWAY RATES AND THE FANCY.

A Case for the Cage Bird Union.

SIR,—I should be obliged if you would kindly grant me a little space in your valuable journal in which to draw attention to what I consider to be a case of exorbitant charge made by a London railway company for the carriage of small birds. On Thursday, February 28th, I travelled from Peckham Rye (Chatham line) to St Paul's with two small cases, each containing a Yorkshire show cage and a pair of Canaries for L.P.O.S. Show, the lot not taking up as much room as an ordinary portmanteau. I was informed by one of the officials that "in accordance with the bye laws of the company" I must pay for the carriage of the birds although they were in my personal care. I accordingly applied at the booking office as to the charge; judge of my surprise when I was mulcted in 8d. Thus, together with the single fare, the charge was 1s. for about three miles! Had I travelled by the electric tram car the total cost would have been three halfpence! And the journey would have been covered just as quickly yet the railway company tell their shareholders they are unable to compete successfully with the tramways! Maybe other fanciers have had experiences similar to mine, and if so, perhaps you, sir, would kindly not be averse to opening your columns to the discussion of what I think is a most important matter. Meantime, perhaps the Cage Bird Union could use its influence with the railway companies—for I believe the charges I have mentioned are exacted on all lines—with a view to securing the abolition or modification of the tariff in question, in cases where birds are in the personal charge of their owners. I should be pleased to supply the C.B.U. Executive with the exact facts if they so desire.—JOHN B. WATERMAN.

An admirable Food of the
EPPS'S
Finest quality and flavour.
COCOA
Nutritious and Economical.

FOREIGN BIRDS AT THE PALACE SHOW.

SIR,—I hope the Crystal Palace show authorities will adopt Mr. F. Finn's suggestion and give a few classes to the freely imported Foreign Birds. I am sure if they give a class each to, say, Budgerigars, Cockatiels, and Java Sparrows, they would be remunerative and add interest to the Foreign Bird section. If they see their way to grant any, I will be pleased to give 10s. 6d. as a special.

Messrs. Finn and Wesley Page have evidently overlooked the record that the Rufus-backed Mannikin (*Spermestes nigriceps*) has been exhibited at the Palace previous to this year. The "Aviecultural Magazine" (Vol. II., Old Series) states that a pair were exhibited by H. B. Smith in 1895; also that 1894 saw the first appearance on the show bench of *Bathilda ruficauda, Spermestes nigriceps,* and *Munia pectoralis.*—S. WATSON.

BIRD LIFE IN YORKSHIRE.

The Gold Crested Wren.

SIR,—Looking through CAGE BIRDS of February 23rd I saw Mr. Stow's note re the Golden Crested Wren. I may say I have spent most of my life in the South of England, removing into Yorkshire ten years ago, and I have always taken a great interest in bird life. I have never seen so many Golden Crests as I have since I have been here (in Hessle). Work being rather slack, I have had a little more time to study them than Mr. Stow (I know Mr. Stow has very little spare time). I have counted as many as eight in one of my rambles and I think that would be hard to beat. Hessle is an ideal place for bird lovers, with its plantations, high hedgerows, quiet lanes, reed filled pits, willow garths, and streams. There are a lot of birds I have not seen, among which are the following—Nightingales, Blackcap, Garden Warbler, Willow Wren, and Jay. I have seen one Kingfisher, and one Hawfinch, a very fine bird. I have been told that once a Nightingale took up his quarters in a part known as Little Switzerland, and hundreds of people from round about came to hear his Majesty, as he had never been known in th district before. His reign was very short. A gallant farmer went forth single handed and shot him. I don't know whether he got the V.C. for this brave deed, (he might have done if a bird lover or two had been close at hand), I think this will answer Mr. Stow's query.—FRISK.

OBITUARY.

Mr. C. A. WITCHELL (Cheltenham).

We regret to learn from the "Cheltenham Chronicle" of the painfully tragic death, on Feb. 28th last, at the age of 44, of Mr. Charles Adolphus Witchell, well known in the town as a solicitor, and to an infinitely wider constituency as one of the cleverest of modern writers upon certain phases of natural history. The sensation was the more profound in that the circumstances under which his death occurred left little doubt that it was self-inflicted, the deceased gentleman being found practically lifeless, with severe razor wounds in the leg and neck. He had recently suffered greatly from acute pleuro-pneumonia. Among the books of which Mr. Witchell was the author, were: "The Fauna of Gloucestershire, "The Evolution of Bird Song," "The Cries and Calls of Wild Birds," "Nature's Story of the Year." etc. Among the subjects which had occupied his researches of late had been the flight of birds, and he quite recently wrote a paragraph to the "Echo" stating that he believed he had solved the problem of aerial flight by human beings by the aid of mechanically-constructed wings. Nature, in her many phases, claimed him as her devotee, and from her cult that of the Law, though she used stronger bonds than those of red tape and sealing wax, could not separate him; and it is open to question whether beyond the good workmanship which justice claims from all conscientious men, the law claimed any allegiance from this son of that more benignant and loveable mother —Nature.

Mr. JOHN H. THACKREY (Shipley).
A one-time Champion Exhibitor laid to rest.

"It is with the deepest regret and sympathy," writes Mr. M. Broadley (Windhill), "that I inform you of the death of Mr. John H. Thackrey, of Shipley, who died on Thursday morning, February 28th, at the age of 56, after a painful illness due to a cancer in the throat. In his day he was a genial, kind, warm-hearted fellow, and one of the most successful exhibitors in Yorkshire. He showed almost every variety in the Fancy, the principal ones being Yorkshires and Plainhead Norwich. In these he was almost invincible. I have known him show a hundred birds in one week. It is about twenty years since he gave up exhibiting. He leaves a widow and one son to mourn his loss. The interment took place at the Windhill Cemetery, and amongst those who attended to pay their last respects were Messrs. W. Mundell (Bradford), J. Greaves (Bradford), J. Dawson (Horton), J. Smith (Horton), A. Haigh (Buttershaw), A. Raistrick (Thackley), Matt Broadley (Windhill), and H. Sewell (Bradford).

An old friend writes:—"The passing away of 'Jack Thackrey,' as the late J. H. Thackrey was known to his many friends in the Fancy, sends one's thoughts back to a generation ago, when it was the day of the big teamster. Thackrey, Russell, and the Mackleys oft used to half fill a show—and sometimes more, and the keenest rivalry existed between the three. In the most palmy days of the great Norwich firm, Thackrey took a big team of Norwich Plainheads to the old Norwich Alliance Show and defeated "the classics," as they were styled, upon their own ground. As an exhibitor of Yorkshires he was quite unapproachable. He was ever open to purchase a good bird; in fact none but the best were of use to him, and in those days there were none who could excel J. H. T. in placing a bird upon the show bench. For many years he had an almost complete monopoly of the Yorkshire classes at our best shows, and it was the height of most Yorkshire fanciers' ambition to wrest from him the coveted first and special, and then hand the bird on to this past master for a good figure—for he would have them, there was no denying him. About a couple of decades ago he retired from the firm which he represented, entering business on his own account, and retiring from the Fancy. Fortune, however, did not smile upon him, and broken in health and fortune, it is sad to think that the once brilliant and successful fancier endured much hardship in his declining years. But amidst all his adversity he ever retained the respect and affection of those who had known him in his more prosperous days, for he was ever the same genial, sympathetic, gentlemanly fellow as when his star was in the ascendant. His passing breaks another link with the old times and customs, and the Fancy has lost one who at all times never forgot that an Englishman should be a gentleman."

STRAY NOTES ABOUT BIRDS.

By Claude St. John.

Since my last stray notes appeared we have heard of several early nests of young birds, among them a young Mule, the solitary survivor of a fertile clutch, the remainder being mostly found dead in shell. The pity of these reports is their aptitude for wiping out of existence the previously-formed good resolves as regards mating up of the enthusiastic and impatient novice. Probably no amount of caution and advice will prevent a number of these errors being made. We can at least, knowing the faith that is in us, once again warn the new beginner not to be misled by these early birds. Of course, the novice may possibly mate up his birds in the heat of the moment and have a good result, but the chances are a thousand to one that the experiment will end in failure and grievous disappointment. Some men are born in luck, but only a very small minority, and, consequently, each one's chance of being among that happy band are very slight indeed.

Mating the Goldfinch.

One often asks when a Goldfinch is ready for mating, and is almost as often given the reply "when its beak is clear." This is the kernel of a very widespread belief that the usual dark stain of a Goldie's beak disappears prior to the breeding season. That it does do so as a rule is a matter of common knowledge, but like all other rules this one has its exceptions. The beaks of many Goldfinches do not lose all the black mark all through the breeding season, although these self-same birds may be in the very best breeding condition, and sire fertile clutches of eggs. When the proper season arises for pairing, therefore, the general condition of the Finches should take precedence of a clear beak. Given a healthy, sprightly, active bird, in vigorous song, and full of that perky swagger about the perches, and a desire to be chummy with a hen that is placed beside him, do not wait for his beak to become quite clear.

Premature Condition.

Another point about the Goldfinch's beak may give one some food for speculation. One often finds these birds with clear beaks as early as February, and the fancier of the old school will then tell you that bird is doomed to die before the breeding season is over. How far this suspicion may be based on fact it would be most interesting to discover, and might incidentally lead to other valuable knowledge. Why, for instance, should a bird die early because it comes into breeding condition a little earlier than usual? And if one species is affected must not all others be more or less subject to the same influences? Would the same effect help to account for the subsequent failures that too often occur after too early attempts to breed from stocks of Canaries? And yet again, is this premature clearing of the beak something quite different from the usual phenomenon of the breeding season? In short, is it, possibly, nothing more nor less than a symptom of anæmia? But I must stay right here. This is speculation enough to "chew the cud" upon for the present.

Birds Dropping Feathers.

At this season, it is not unusual to hear of birds beginning to drop a few feathers. This may, or may not, be a serious matter for the breeder. It may be simply the finishing up of a late moult which has been interrupted during the colder months, in which case the bird usually improves rapidly, and grows fine as soon as the weather gets mild. In such cases it generally happens that the moult has been going on slowly and almost imperceptibly all through the winter, and, for some reason or other, quite a large number of birds appear to have had this kind of protracted moult this last season. However, a generous diet, and a few doses of a simple tonic of quinine and iron in the drinking water will usually put matters right. One point that must not be overlooked is that these birds must on no account be put up for breeding so long as a feather is being cast. The dropping of feathers must have quite ceased for at least two or three weeks before mating if one is to stand much chance of a successful result therefrom.

Effects of Seed upon Health.

Although we are well provided with facts concerning the chemical composition of different kinds of seeds used for feeding cage birds, we are still lacking in knowledge of the effects of each kind of seed when birds are fed solely upon it. Save for a few generalisations, which never seem to be based on practical experiments, such as hempseed being "too heating," and darkening the colour of British birds, linseed causing dysentery, and so forth, we really know little about the matter. It is a thing we should know more of. Once, for instance, whilst carrying out an experiment I was greatly struck by the remarkable thirst that promptly followed the addition of hemp seed to the diet.

"CAGE BIRDS ANNUAL"
is invaluable to beginners in the Fancy.

The Gouldian Finch.
As Seen In Its Native Wilds.

The appended account of this fascinating and beautiful Foreign bird is taken from the finely got-up catalogue just issued by Messrs. Payne and Wallace, Direct Importers, The Little Zoo, Bath, entitled, "Life Amongst the Birds and Animals of Australia." It is full of good things, and well illustrated from photographs.

In writing about this bird, we include the three varieties, viz.:—The Black-headed Gouldian (*Poephila gouldiæ*), the Red-headed Gouldian (*Poephila mirabilis*), and the Yellow-headed Gouldian (*Poephila armitiana*). The latter is sometimes known as the Orange-headed Gouldian. At one time it was everyone's idea that they were three distinct species, but it is now proved that they are nothing more nor less than different varieties of the same species. There has been a good deal written about these lovely birds, but a great number of the writings have been of a rather unreliable character. What we are writing about the Gouldian Finch is what we have seen and experienced in its native home.

The Gouldian is purely a tropical bird, and is rarely found farther south than Latitude 18 deg. It has, however, a very wide range, extending from the North-East of Queensland to the North-West Coast of Western Australia. It is rather more plentiful in the latter part, which is its favourite haunt.

The Black-headed Gouldian is undoubtedly the most plentiful of the three varieties. For instance, taking on an average, for every 100 Gouldians we take from the nets, 80 per cent. are black-heads, 15 per cent. red-head cocks, and only 5 per cent. red-head hens. It will be clearly seen that red-head hens are in the minority. Now the ten red-head cocks have to find mates somewhere, and as there are so few red-head hens, they have nothing else to do but to pair up with the black-heads, and this is what they do. In pairing up in this manner it seems of little, or no consequence, whether it be a red-head cock and black-head hen, or vice versa. Their young are always true, either red-heads or black-heads. We have seen many cases where they have been mixed, perhaps there have been two Redheads and three Blackheads.

We have many times caught the adults of the two varieties, together with their brood, and in most cases the young were of both kinds. We very seldom come across a pair of Red-heads though. The only possible way to find out these facts is by handling them in large quantities as we do.

We see no reason why these birds should not be bred in England more so than they are. In the first place, it is useless keeping them in a small cage and expecting them to breed. What they really require is an aviary of fairly large dimensions, with plenty of flying room. Now, what is really best for breeding is a hollow stump, or limb of a tree, if it can be obtained. It is desirable to obtain one, if possible, with a number of holes in it, large enough for the Gouldian to deposit its eggs. If they are supplied with a little dry grass, or other nesting material, they will soon settle down to their task of nest making. They do not make an elaborate nest as some suppose; in fact, in their native state they do it in rather a slovenly fashion.

On one occasion, when Mr. Payne was riding through the bush, he saw a Gouldian fly out from a low iron bark tree. Upon pulling down the branch, from where it had flown out, it snapped off. In this branch there was a small hole, which acted as an inlet to the interior of branch, inside of which was found a Gouldian's nest with four eggs. This is an instance of how they will crawl into any hole and lay their eggs. We could quote scores of similar cases; in fact, we have known them build their nest in the whim of an old shaft of a disused mine.

For their general safety, apart from breeding times, they must be kept from all draught. Some bird fanciers keep their birds in cages of the Crystal Palace type. These cages are then kept in front of the window. In the morning, when the room is swept, the windows are put up to let out the dust, and the birds are subjected to a direct draught, and then the owners wonder why they die. They can stand a good amount of cold, but it is imperative that they must be kept from all draught. They are not "soft" birds as many think, but are very hardy, provided they are looked after and kept in a proper manner.

As regards diet, they have much the same as all the other Finches, viz., canary and millet. This is their staple diet, but they are very fond of hayseed (sweepings of a hayloft), and they might also be given green food, such as grass in flower and French lettuce. It is also wise to put into their aviary, where they can have it when they like, such things as rock salt and cuttlefish bone. Let them have plenty of flint grit and clean water.

The Gouldian seems so much tamer and gentler than the other kinds of Finches. At one period we were out trapping Gouldians, and, at this time, had a tent with us. We had finished our netting operations for the day, and were sitting in the tent where we had our captives in large cages. We were sitting quietly, when one or two Gouldians actually came into the tent, and tried to get with their mates, that were in the cages. We were not more than four feet away, and yet they took not the slightest notice of us. To see them in their native state is a great sight, one never to be forgotten. When the sun is shining upon them they look like one mass of gorgeous butterflies.

The following appeared under the name of a well-known contributor, in the supplement to Cage Birds, published on April 7th, 1906. The writer, in speaking of the "Gouldian Finch," says:—

"By the courtesy of my esteemed friend, Mr. Housden, of Sydenham, I am enabled to explain the method of capture; I believe the following facts are published for the first time. Mr. Housden's private consignment of Australian birds have been captured for him by a friend who had lived nearly 30 years in the far North-West of Australia. It necessitates a journey of many hundreds of miles into the Wilds of the North-West, with a camp equipment of horses, van and a number of natives. The first step in their capture is to find a water-hole (pond), and cover the surface with long grass. Then they take a long tin of water, and put the long clap nets round this. The birds, coming to drink early in the morning and the late evening, go into the nets and are so caught. All birds are caught thus in a country where water is so scarce. . . . My friend, Mr. Housden, who has privately imported many hundreds of these birds, tells me he has never received one Yellow-head, and in all his experience he has only seen two."

Before we start pulling to pieces this "most interesting method of capture," we wish it to be clearly understood that we are in no way dealing with the writer of the article, but merely his informant. We will deal firstly with Mr. Housden's "friend who lived in Australia for nearly 30 years to capture the birds for him." In speaking of his "friend," he means us, and we defy him to contradict this. We have never at any time of our existence captured birds for him. We have, however, entrusted birds to his care, to dispose of for us; but then he was merely acting as agent for us. Nothing more nor less. As for knowing him for "nearly 30 years," we never set eyes on him, nor even heard of him until two years ago.

We agree with him where it is mentioned that it necessitates a journey of many hundreds of miles, but when he speaks of covering the water-holes (or pond, as he chooses to call it) over with long grass, it is most amusing. The idea of covering over a large sheet of water, possibly a quarter-of-a-mile across! They do say "patience is a virtue," but we think Mr. Housden would have the patience of Job, if he was to start covering over one of these water-holes with grass. Then he says we use a long tin filled with water. This is news to us. By comparing our method of trapping the birds and Mr. Housden's "method," the reader will see the difference.

He says that "he has imported many hundreds of these birds (Gouldians), but has never received a Yellow-head, and in all his experience has only seen two." We very much doubt if he has ever seen one; as we, in all our experience, have only handled three. We brought one to Europe last trip, and sold it, together with some *Emblema picta*, to a dealer named Schiavetti, at Genoa. We are very interested to know where Mr. Housden saw the two that he speaks of.

Whilst Mr. Housden was agent for us we mentioned a few of our experiences to him, and our method of trapping; but he made a hopeless muddle of it when he informed the writer in Cage Birds how it was done. We cannot even imagine from where he could have obtained some of his ideas, for when we saw the article we are complaining of, we asked Mr. Housden how he had made such a muddle of it, and although his name was mentioned in connection with it he actually went as far as to say he knew nothing of it. Now if Mr. Housden had told us he wished to write a few facts upon the methods of capture, and asked us for the information in a proper manner, we should have been pleased to help him.

(*To be continued.*)

The Border Fancy Canary.

By JAMES MACKIE.

A Paper read before the Edinburgh Western Ornithological Society, February 7th, 1907.

Before dealing with my subject, "The Border," it will perhaps be better for me to ask your indulgence for a short time on a species of the Canary tribe in which you are perhaps not interested, and at the same time ask your forgiveness if I seem presumptive in allowing myself, as a breeder of practically no repute, to stand before you to-night. Be one's experience in Canary breeding (no matter of what variety) of a short or long period, he cannot attend to their daily wants and watch their various peculiarities without learning something that interests him, and that enthusiasm grows and deepens in the species of his own liking. Herein, to my mind, does the novice or the young fancier excel; he is anxious to learn; he reads all he can lay his hands on; seizes and embraces every opportunity wherein he thinks information or help is to be obtained. On the other hand, we have the life-experienced breeder, who is perhaps slangily termed the auld stager—plodding along, year in year out, in his own hilly how, never getting out of the rut.

Now to my subject—the bonnie wee Border. In the first place, let me state that I am not aspiring to the height of informing you how to breed Exhibition Borders. As you are aware, the species consists of somewhere about six varieties, a thorough handling and exposition of which would fill a handsome book and prove a valuable and instructive piece of literature; the Fancy press needs apparently its attention called to the fact, that instructive and reliable literature is scarce. Simply, then, as a breeder and lover of the Border, I will give you my opinion on the specie as it has appealed to myself. The Border to my mind is

ONE OF THE BEST VARIETIES

that can be taken up. For a moment look at the little gem on the show bench with plumage as soft as silk, and coloured to perfection; his bright eye and natty little head calls for admiration all around. A cage is lifted and he hops gracefully from perch to perch with a swagger all his own.

Gentlemen, I am glad to say Scotland is the home o' the Border and Scotch (I know some will pull me up for this assertion, nevertheless it is true), and in both varieties ample scope and opportunities are there to test all that is best in the fancier, be he experienced or a novice. The Border Fancy at the present time is the nearest approach to the Canary in its wild state, and is a direct descendant of the same, greatly modified and enhanced in appearance of course, although some will assert that Borders can be bred from German bens and small Norwich cocks, and such like. The Border has many commendable characteristics; one is it is easily bred. It is also a grand feeder, a statement in which most Scotch Fancy breeders will concur. It has proved itself the saviour of many varieties to no small degree, and this I think speaks volumes for the parental capacity of the "little gem." With regard to the Border fit for the show bench, competition is keener, and, as already stated, calls forth all the wisdom, patience, and perseverance that the breeder can give. To anyone, however, who is desirous of giving this species a trial I would strongly recommend that he procure of some breeder of reputation whatever he wants to start with, thereby getting the blood of the right sort at once. Thus he will find, as I have found, that half his worry is over. This may appear novice-like advice; nevertheless it is sound and reliable. Exhibition Borders, like all other varieties, cannot be picked up for a mere trifle, as some assume, but can claim a fairly good price when of the right stamp. At this point I think I cannot do better than read to you

THE STANDARD OF EXCELLENCE

of the Border Fancy, as drawn up by and adhered to by the Border Fancy Club. "The grand essentials of a Border Fancy Canary are type and quality—without these it is worthless. The general appearance is that of a clean cut bird, lightly made, compact, proportionable, sprightly, close feathered, smallest size Canary, showing no tendency to heaviness, roughness, frilling, or dulness, giving an impression of fine quality and symmetry throughout. Head small, round, and neat looking, bill fine, eyes dark and bright, neck rather fine and proportionate to head and body. Body and back well filled and nicely rounded, running in almost a straight line from the gentle rise over the shoulders to the point of the tail; chest nicely rounded, but neither heavy nor prominent, gradually tapering away to vent; wings compact and carried close to the body, just meeting at the tips; legs of medium length, showing little or no thigh, fine and in harmony with the other points; feet corresponding. Size not to exceed 5½ in. in length, measuring in the usual way. Plumage close, firm, and fine in quality, presenting a smooth, glossy, silky appearance, and free from frill and roughness. Tail close packed and narrow, being nicely rounded and filled in at the root. Colour rich, soft and pure, as level in tint as possible throughout, but extreme depth, or hardness, such as colour feeding gives are objectionable in this breed and should be discouraged; red-fed birds debarred. A plebescite has been taken for or against colour feeding, and out of a total membership of 134, 21 voted for, and 111 against it. Position, semi-erect, standing at about the angle of 45 degrees. Carriage gay and jaunty, with a fine poise of the head. Health, condition, and cleanliness shall have due weight. In judging marked birds, type and quality should form the first consideration in these as in other classes, and no prize should be awarded for good markings alone when the type does not conform to the club standard.

With the guidance of such an accurate decription of the Border Fancy, a breeder exactly knows what his ideal is, or should be, consequently, the road is clear, but is at times "hilly."

ANOTHER GRAND CHARACTERISTIC

that appears to me is the wee gem's natural colour. I am glad the B.F.C. would not entertain the idea of colour feeding, for what can eclipse the natural colour of a Border, produced as it is at the present time in clear birds? Where does it come from? We shall see later where at least a large proportion of it comes from. In the clear Border Fancy Canary (that is, of course, Yellows and Buffs), we experience in the town, with its smoke, impure atmosphere, and what not, a great difficulty in keeping the birds clean, an essential which is imperative on the Show Bench. Thus almost constant hand washing is necessary, a delicate job even for the most expert; and one which takes away that so desirable gloss. This is just exactly the point where the Border breeders of the Border Counties, and all country breeders, have the pull; all honour to them, however, although I believe they will get a shake some day. The Border Counties breeders can turn out the "best Border" on the Show Bench at the present time, a fact which no one, I think, would ever attempt to deny, not even our brother Fanciers across the Border who received at their hands such a severe licking in the B.F. contest at the Scottish National Exhibition of 1906-1907, and I regret to observe they are now coming forward with excuses and suggestions, some of which are hardly Fancier-like. However, I see no reason why we should not endeavour to win the laurels of the Border, and will not venture on the pathway of the even marks and unevens, as it is delicate ground. Much regarding this variety has been said and written which involves numerous arguments, from which I will refrain, merely remarking that there is no royal road by which to procure the so desirable even marked.

I will now pass on to the Green and Cinnamon varieties of the Border, which at the present time are very much neglected and afford ample scope and opportunity for all. Personally, I don't think there is another variety of the Border Canary that calls for greater improvement.

(To be continued.)

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

Jaquot, the parrot, about whom Uncle Peter spoke last week, has given a further instance of his intelligence. His mistress writes from Switzerland. "Last Sunday afternoon, as I was writing busily, Jacquot suddenly gave the screech of fear, mixed with astonishment and indignation, which with him always means 'a Hawk is coming, look out!' I raised my head, and saw flying straight towards the house an Owl, with four or five little birds as body-guard. It was not later than three o'clock in the afternoon, and it is not the custom here for Owls to fly by daylight; but it was a very dark, dull, gray, east-windy day, with some snow falling, and absolutely no sun. The Owl flew up to the cross on the top balcony, and there he sat, paying no attention to anyone. I cut up some raw meat and put it handy for him, and I think that later on he came down and took a piece; and I believe that he managed to catch some of the Tits or other little birds who come to the balconies to be fed. They did not show the least fear of the owl, as they would have done had it been a Hawk; but in the morning there were lots of little feathers in the snow."

Now Uncle Peter wonders how Jacquot, who had probably never seen an Owl in all his life before, should have recognised him as the same kind of malefactor as a Hawk, while the little native birds, who should have known better, showed no fear of this, their admitted natural enemy.

* The Wren's Nest.

The Wren's nest is a work of art. It is made of moss, leaves and feathers. It may be found in an ivy stump. I once knew of a nest, which the birds built in for several years; whether the same birds or not I cannot tell. Each year they would come back and put a few more feathers inside it. The nest has an entrance at one side about the size of a two-shilling-piece.—FREDERICK ROBERT GREGORY (age 12), Beaulieu Schools, New Forest.

* A Savage Bird.

The Hawk is one of the most savage of English birds. He is a brown bird, with wide, spreading wings, and great claws on his feet. Once I saw a Hawk after a Duck. The Duck rose from the river, and flew round and round in circles, till it got up high in the air. But its enemy came up faster than he could, until the poor duck found himself about ten feet below the cruel foe. As soon as the duck saw that his enemy was above him he dropped, quacking loudly. Suddenly the Hawk pecked the poor duck on the top of the head, and knocked it down in a patch of reeds. It then began to eat the Duck.—Sent by JAMES MAURICE HENDEY, age 13, Beaulieu School, New Forest.

** A Lover of Freedom.

The Lark is one of our well-known English songsters. It is a common and by no means a good-looking bird, yet its song is valued by all. It has one of the sweetest and clearest strains a bird ever had, and can be heard a good distance away. The Lark lays three or four small eggs of a dark brown colour. Its nest is very seldom found, because she hides it so well, and also because her mate will draw you away from it by his plans and stratagems. It is a very cruel thing to confine a Lark in a cage, for the Lark is a bird which loves its free life. High up in the air, carolling away its magnificent song, you always find the Lark, which we might well call "The King of Songsters."—Sent by JOHN G. BENSON, age 15, 6, Castle Street, Tralee, Co. Kerry.

ESTABLISHED 102 YEARS.

HINDHAUGH'S 'SPANISH' SEED.

Absolutely the finest the World produces—Boldest and Cleanest.

MONEY CAN NOT BUY FINER.

SPECIAL OFFER:—56lbs. for 13/- Carriage paid in U.K. Cloth bag included gross (excepting Ireland).

This very special offer is made to introduce this "GRANDEST OF ALL SPANISH CANARY SEED" to all bird fanciers and includes delivery to any station in England, Wales and Scotland having through communication with the North Eastern Railway from Newcastle, by passenger train.

We quote as follows:— DISTANCE NO OBJECT.

"Sample A"	Finest obtainable Re-cleaned Spanish Canary Seed..	10/- per 56 lbs., 2/9 per 14 lbs.
"Sample B"	Very Fine Bold Re-cleaned Spanish Canary Seed ..	9/- " " 2/6 " "
"Sample C"	Really Good Bold Re-cleaned Spanish Seed	7/- " " 2/- " "

Packed in paper parcels up to 28lbs., free. Over 28 lbs. should have 3d. extra remitted for cost of cloth bag to ensure safe delivery. *These prices are free on rail.*

Carriage by passenger train (payable by buyer) is only:—(in England, Wales and Scotland)

Above 50 miles and not exceeding 100 miles:—7d. for 14lbs.	11d. for 28lbs.	1/9 for 56lbs.
100 " " " 200 " 10d. "	1/2 "	2/4 "
Over 200 any distance .. .. 11d. "	1/6 "	2/11 "

JOHN HINDHAUGH & CO., *Direct Importers,*

Proprietors:— MILLERS AND MANUFACTURERS,

Alderman J. Barker Ellis. Sir Joseph B. Ellis, J.P. William B. Ellis. Joseph Ellis.

Newcastle-on-Tyne.

HYBRID BREEDING:

Preparations for the Coming Season.

By T. H. KINCH.

(Continued from page 183.)

I had a large plum tree in my garden, noted more for its crops of green flies and other kinds of insect food than for the plums it bore. This tree gave me no end of delight by reason of the numerous birds which used to visit it. I have counted twenty Goldfinches on it at one time (young and old), several nests of Chaffinches, Sparrows, Bullfinches, besides the Oxeye, Cole, and Blue Tits. As I explained earlier, I had my sitting room and bird room combined, the door always being open, and the tree not ten yards away. My caged birds and the wild songsters could hear each other, and a wild hen Chaffinch would nearly come inside, which so upset my bird that it refused to have anything to do with the Bullie. This was, as I believe, the cause of the continual quarrelling. This experience of mine may prove a valuable guide to Hybrid breeders, who should certainly keep their pairs out of hearing of their own species.

Not for one moment did I expect to be successful with my Chaffinch-Bullie, as I knew the great difficulty of getting the Chaffinch to pair in confinement. It was always supposed that they paired in the air. This fallacy, I believe, is now exploded. I have seen them pair repeatedly in a wild state, and, as I have made the Chaffinch my great study during the past ten years, I know something about them, and I still have hopes of breeding them in confinement. There have been crosses produced on the show bench between the Bramblefinch and Chaffinch, or Chaffinch Bramblefinch, and recorded by the papers, but, unfortunately, I have not yet seen one.

Some years ago, if my memory serves me rightly, Dr. Greene offered a good sum for a cross between the Chaffinch and Canary. I tried for this cross for over ten years, and I still think it is obtainable; but I must leave my experiences in this direction for another season.

I should certainly like to know from breeders of the Bramblefinch-Chaffinch Hybrid full particulars as to how they are bred, whether indoors or out, and under what conditions; whether old hands or novices have been most successful, also the food given. I am quite aware that both birds will do well on a seed diet, but did they raise their young on a seed diet only? If this should meet the eyes of breeders, and they could, or would, give me a few particulars, all Hybrid breeders would feel grateful. If they were bred in cages then I can say they have been fortunate. I think they must have been bred in an aviary, or rather pairing took place there, the eggs being transferred to the Canary. I know of an instance this year where a cock Bramblefinch had mated with a Hen Bullie. They had four eggs, two of which were full; but before they hatched they got broken. Had they been transferred to a Canary when the breeder had the chance they might have been saved; but he had to leave home, so they got neglected, and he never had the chance again. The rest of the eggs proved unfertile. This breeder was quite a novice, and could not be told anything. His own idea was to place the eggs in a wild bird's nest, in a hedge, under Greenfinches; but through going to Camp (being a Volunteer) he had forgotten to do so, and had to hand rear them when he came home. These ideas of his might have succeeded provided the nest had not been found and the eggs taken.

The colouration of the eggs varied a great deal from the Bullfinch at large, and the other eggs the Bullfinch laid varied a great deal from the first clutch. From my experience of caged Bullfinches eggs they vary as the season advances, and at any time they are not the colour of the wild egg. Indeed, many would be recognised only by an expert. Whether there is a difference in colouration between fertile and unfertile eggs I am not yet prepared to say. The eggs of each of my Bullie hens have differed in colour, although they each laid under similar conditions.

Is it possible to account for the differences by the fatness or leanness of the birds; do they arise from a too stimulating diet, such as hemp, or does the amount of wing exercise make any difference? All my birds had an abundance of green food with insects attached to it, but that did not alter matters.

In only one instance was a hen egg bound, and, indeed, I can say that it is very rare that I have a British bird egg bound, a complaint which I attribute to over-fatness. Neither have I ever had a shell-less egg from a British bird, and very rarely one of late years from Canaries.

WILD BIRD LIFE

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "Eastcote," Alma Road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

Effects of the Severe Weather—The Jay.

During our rambles along the country lanes, across the downs, and by the leafless hedgerows, we have from time to time had proof of the effect of the severe weather upon bird life. One day it was the emaciated body of a Song Thrush; upon another a Lark, a Greenfinch, several House Sparrows, and others. To-day we found the wasted body of a hen Coal Tit. There was no mark of violence upon it, and although the severity of the weather has somewhat abated, one can only conjecture that she was unable to pull round after a period of short rations and intense cold. With these proofs before us, we can imagine what the waste in bird life has been this winter. It is the small insectivorous species that suffer most; they are so tiny and delicate that to go without food for any length of time is fatal to them. One somtimes wonders how such tiny creatures as Tits, Wrens, etc., manage to keep alive at all.

We know that the body temperature of a bird is considerably higher than that of an animal, but whatever it is, it has to be maintained, and unless small birds have very slow digestions they must be constantly replenishing the waste heat; but then what about the long winter nights? Fortunately for these birds their habit is to roost in holes, and in company with their fellows. It is no uncommon occurence to find a fluffy ball of some half dozen members of the Tit family in one roosting hole. As regards the roosting of birds, I think the country Sparrow is about the best able to take care of himself. He finds some of the most snug corners imaginable in the thatch of barns, over warm stables, and cosy holes in hay-ricks, and these he shares with his own species. Company means warmth, and when the cold wind blows during the night, it is no use looking on the windward side of the rick for these knowing birds.

As a youth, in the company of other sportive lads, we frequently went round the farm buildings and ricks with the nets. The roosting of the birds was quite a study. By noting the direction of the wind and other weather conditions, we seldom made mistakes. The sheltered spots generally afforded most sport. Upon calm nights the evergreens were as prolific as the buildings and rick.

The dead body of the Coal Tit was the second specimen noted in this district, although the Blue Tit, Greater and Long-tailed, are fairly common. The Coal Tit is a rather interesting species. We have a British and a Continental bird; we have also a brighter coloured variety in the Scottish forests; this is, in colouration, midway between the British and Continental species. No doubt the cause is to be found in the different climatic conditions under which they exist. We have much the same thing in several other species of birds that have representatives in other parts of Europe and elsewhere.

One of the most conspicuous birds in the woods just now is the Jay. He is a noisy bird, and his well known screech can be heard some distance, and as he flies from one the

THE JAY.

white in his plumage shows up plainly. His feathering is wonderfully soft for so large a bird. Compare it with the Magpie or Crow; these have hard glossy feathers, whereas the plumage of the Jay has a faint resemblance to that of nocturnal birds. Why there should be this difference it is hard to conjecture. Jays and Magpies live practically similar lives. Unfortunately both species are gradually decreasing; it is only their extreme wariness which saves them. Note the difference in the behaviour of the Jay later on, when the nest is built, and the hen bird is sitting on the half dozen greenish eggs. Although the leaves are thick upon the trees he will slink away like some cunning old fox, without so much as a whisper. To see him then one would think it was impossible for him to raise a screech which tells all the wild creatures within hearing that an intruder is in the woods.

Notes and Queries.

The Art of Cliff Climbing.

During the spring months thousands of sea birds' eggs are collected and sent to the markets of large towns. Few people who buy them have any idea of the risks incurred by the gatherers in this occupation. Frequently the gatherer will have nothing but a few strands of rope to trust to for his safety. In some districts this art of cliff climbing has been handed down from father to son, and only a few families pursue the occupation. So careful and clever are they, that a serious accident is hardly on record.

Our Winter Visitors.

The Nightingale, Cuckoo, and many well-known warblers are now wintering in the sunny South, hundreds of miles from their summer homes. They left us as the days shortened, the nights grew chill, and insect life became scarce. Thousands of them have crossed the sea, yet, in spite of this big migration, bird life is fairly plentiful in these islands during the winter. Our summer songsters have gone South; others from the North have come South to us. The vicinity of the North Pole is the home of many of our winter visitors. Winged creatures make the journey from the far North in a very short time.

Concerning the Hawfinch.

What are the chief foods of the Hawfinch at different seasons of the year?

How are the adult birds caught; will they come down on the ground to a call-bird in a cage, or a braced bird? All I have seen make off at sight, and would be difficult to get even within gunshot.—YOUNG BEGINNER.

The Hawfinch feeds principally upon the stones of berries and fruits of such trees as the holly, pine, hawthorn, laurel, etc., and visits the orchards for the stones of the plums and cherries, where it does considerable damage. In the summer, caterpillars, beetles, small snails, and various insects form its food. There is no more wary bird in our woods than an adult Hawfinch and even the young birds, as soon as they are able to take care of themselves are very careful not to be seen. During the summer small parties of young visit isolated gardens to feed upon the rows of green peas. When disturbed, they fly very low, and generally get away without being detected. This is the time to catch them, which can be managed by the aid of a silk pocket net. It is very flimsy and light, though strong, and is fastened between two rows of peas. When disturbed the birds dash off down the rows and get entangled in the net. Many old birds are caught by accident by bird catchers, while netting for other species. A call bird would only be useful in places much frequented by them, and then bird lime, or horse hair nooses, would be the most effective snares.—H.N.

Goldfinches in New Zealand.

Having just returned from New Zealand, I thought the following might interest you. While staying in the Waikato, where there are thousands of Goldfinches (not so large as our Britishers), I saw one day four white ones, that is, all their body feathers were white, but their wings had the usual yellow markings. They had pink eyes. They used to come round every day, but I could not catch them; they were too artful to come into our trap. I may say that I have received great benefit from the trip, and live in hopes of going out again.—H. FINDLAY (East Croydon).

Advertisements continued from page 224.

FOREIGN BIRDS.

COCK St. Helena, seed eater, 10/-.—Nicholas O'Reilly, 9, Royal-cres., Ramsgate.

AFRICAN Grey Parrots, magnificent birds, 18/- each.—De Von, 114, Bethnal Green-rd., London.

PIPING Bullfinches, English tunes, from 15/- to £5; German hand-reared tame Bullfinches, 5/- each.—De Von, 114, Bethnal Green-rd., London.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together and counted as one Advertisement.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

HAVE YOU YET SEEN IT?

My New Post Free Catalogue.

32 Pages without Cover, with One Hundred and Six Illustrations.

Of Aviaries, Cages, and all Appliances for the Birdroom, together with Foods, Medicines and all Seeds, etc., suitable for all Cage Birds. If you have not already sent for one DO SO AT ONCE, it will save you money, vexation, disappointment, it being an up-to-date Catalogue, and not a three or four page circular bill (the so-called illustrated lists and catalogues).

Florence-rd., Pakefield, Lowestoft. February 26th, 1907.—I received cage quite safe, and am very pleased with it.—A. Haylett to W. Rudd.

22, Great Stanhope-st., Bath. February 25th, 1907.—I thank you for the cage, which arrived quite safe. I like it very much indeed. A marvel of cheapness.—E. Howell to W. Rudd.

W. RUDD, The Bird Specialist, Norwich.

AVIARIES & CAGES FOR BIRDS;

and How to Make Them.

By I. W. HINTON.

JUST COMMENCED a most interesting series of articles which will be eagerly read by all bird lovers. Not only are the various kinds of Aviaries—outdoor and indoor—fully described, but a lot of useful information respecting their inmates is also included.

In Nos. 2,171, 2,174, and 2,183 of the ENGLISH MECHANIC.

Price 2d. each of all Newsagents, or post free from the Office for 7½d.

A specimen copy on receipt of Post Card.

ENGLISH MECHANIC, CLEMENT'S HOUSE, KINGSWAY, W.C.

THE HYGIENE OF BIRD KEEPING.

By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.

Price 1l, post free from CAGE BIRDS Offices,

154, FLEET STREET, LONDON, E.C.

OPINIONS OF THE PRESS.

LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."

COUNTRY LIFE: ". . . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

BIRD NOTES

FROM—W. T. MOULTON & CO., 5, Church Street, BRIGHTON.

MEDICINES.

DIARRHŒA, inflammation cure, will cure any bowel trouble, 7d. per ounce, free.—Mather, 65, Albert-rd., Widnes.

BRONCHORINE.

Ideal tonic, cold, wheezing, asthma, brings birds into breeding condition, invaluable for young; original testimonials.—Apply, Crawley, 112, Radford-boulevard, Nottingham. 9d., 1/6, and 3/-.

PANNASSINA.

A medicinal preparation for Canaries and all kinds of cage birds, prevents and cures asthma, wheezing, loss of song and all diseases caused through damp and cold; is an excellent stimulant, and takes the birds easily through their moult. This speciality has built up a 30 years' reputation entirely on its own merits, invariably effecting a cure after every other remedy has failed. In 6d. and 1s. tins, postage 1d. extra. If you cannot obtain it from your tradesman, apply direct to W. J. Hammond, 19, Anstey Road, Coldharbour Lane, Camberwell, London, S.E. Agents wanted.

Established 1879.

J. Sandiford, Bird Specialist, PRESTON, Lancs.

Goldfinches, Bullfinches, Linnets.

Beautiful cock Goldfinches, 2/6, 3/- each; large selected, for showing and muling, 3/6, 4/- each; hens, 1/- each, three 2/6; cock Bullfinch, 2/-, 2/6 each, three 5/-; hens 1/6, 2/- each; Goldfinch cages, 1/8; Linnet cages, 1/3; Lark cages, 1/-; box cages, 1/4.—Matt. Hopkins, Bird Specialist, 38 and 41, Fylde-st., Preston, Lancashire.

HARRY ALLEN.

What, again! First and second at Newtown, and first and second at Bradford this week. No wonder I win all before me with the kind of birds I keep and send out. My birds are winning all over. Read singing results and testimonials in previous issues of CAGE BIRDS. Big fine healthy cock Linnets, singing, well pencilled, 2/6 and 3/-; extra picked birds, sure mulers, very tame, good size, 3/6; cock Linnets, singing beautifully, in a polished singing contest cage, with a packet of my special mixture and instructions how to feed, 4/6 the lot. Young, house-moulted Linnets, singing hard, taught by my champions, 7/6, 8/6, and 10/- each, including singing cage. Birds taught and trained for contests, 15/- each, no rubbish, will soon make a name for their owners in the singing world. Contest cages, 1/6 each, or 7/6 half a dozen. Four packets of my special mixture, 1/-. Linnet keepers wishing to know how to make Linnets sing at one another with their wings down should send stamped envelope for particulars of my book, containing secret of management, etc. It never fails. "8, Handel-ter., Sutton, Surrey. Dear Sir,—Received bird safe on Thursday morning. I am greatly pleased with it. He is a grand bird, and commenced to sing as soon as I unpacked him.—J. Wright, to H. Allen." "9, Wood-row, Bebside-furnace, Northumberland. Sir,—I am very well satisfied with the Linnet you sent me. I want you to send me two more. I enclose postal order for same.—Henry Sharp, to H. Allen." I have hundreds of testimonials. All the above birds are trained by me, and are the best that can be possibly got. For proof see singing results. Send to the original Linnet firm, Harry Allen, 42, Brown Hill-ters., Harehills-lane, Leeds.

SIBERIAN LINNETS,

2/6; Siberian Goldfinches, 5/6; Siberian Bullfinches, 5/6; all specially imported.—Varney, Stratford, London.

Feb. 14 was the Birds' Wedding Day.

LATEST OPINION OF MACKLEY BROS.' BIRDS. ☞ "High Street, Uppingham, Rutland. Jan. 12th, 1907. Dear Sirs,—The two Birds arrived safe, in the PICTURE OF HEALTH; they are the BEST TYPE of Norwich Plainhead I ever saw. I am HIGHLY DELIGHTED with them. I shall certainly recommend you to all I have the opportunity of so doing. I never had the favour done me from any one FIRM but yours by sending birds on approval without the Deposit System. Trusting the Firm of MACKLEY BROS. may live and reign for the sake of their customers.—Yours faithfully, J. Waddingham to Mackley Bros."

Postal and Telegraphic Address: **MACKLEY BROS., (Jacob Mackley), NORWICH.**

FANCIERS NEAR STREATHAM
are invited to inspect my large stock before purchasing elsewhere. Typical cocks, 6/6, hens, 3/6, better value unobtainable; seen any evening.—M. Hardy, 23, Pathfield-rd., London.

CHAMPION NORWICH.
Own breeding (1906); several pairs, rare type, quality and substance, from winners, nothing more reliable, prices £3, £3, £4.—Aitchison, 24, Fettes-row, Edinburgh.

CHAMPION NORWICH.
A grand stock of Plainhead Norwich, fed to perfection, pairs from 10/-, cocks from 6/6, hens from 4/-, also a few cinnamons; approval; inspection invited.—W. Growdridge, Clarendon-rd., Hinckley.

OWING TO PRESSURE OF BUSINESS.
Sixty-Norwich, dirt cheap to clear; hens 2/6 to 10/-; cocks 5/- to 15/-. Mr. Lee, West-gate, Southwell, writes: "The birds give great satisfaction."—Pass, Cage Maker, Hucknall Torkard, Notts.

A. C. BURN,
14, Fabian-rd., Fulham, London, has a few Norwich Plainheads, clear and variegated, buff hens and cocks, at 10/- to 20/-, also few matched pairs, 20/-, 25/-, 30/-, all bred from winning strain; can be inspected, or sent on approval, cash or deposit.

WRIGHT AND SON,
84, Heath-rd., Norwich, winners of hundreds of money prizes, also medals, etc., in open competition at Crystal Palace and leading shows. Have some grand stock in Norwich Plainheads for sale; pairs, matched to breed show birds, 10/6, 12/6, 15/- and upwards; prize-bred cocks, 7/6, 10/6 to 20/-; hens, 3/6, 5/6 upwards; all in good breeding condition; approval.

F. EATON,
Breeder of Norwich and Yorkshire Canaries.—I have won this season at Parkgate, Bramley, Sheffield, Goole, Carr Vale, the following prizes:—Four firsts, nine seconds, seven thirds, six fourths, and other cards. I have now a few birds for disposal, same strain as my winners; prices reasonable; can be seen any Saturday or Sunday; stamp reply.—147, Freedom-rd., Walkley, Sheffield.

CHAMPION MATCHED PAIRS
of high-class Norwich Plainheads. Can spare as follows:—Large 1905 bred, clear buff cock, Booth's strain, champion stock bird, matched to 1905 bred clear yellow hen, of rare type and colour, Bishop's strain, price £2 2s.; this pair bred four winners last season, and can again. 1906 bred yellow cock, real gem, ideal type, rare colour and quality, Bishop's strain, matched to monster 1905 bred, clear buff hen, Beardall's strain, nicely frosted, plenty of substance, and grand breeder, price £2 2s.; the hen alone worth the money. Massive 1905 bred ticked buff cock, extra stout, Baker's strain, rare type, good in wing carriage, matched to clinking ticked yellow hen, Eckersley's strain, good in type, and full of colour; this pair bred over £20 worth of stock last season, which are sold; price only £2. It pays to buy the best, and breed your own winners. Read the following testimonial just to hand, scores more similar:—"41, Park-rd., St. Helens, Lancs., March 9th, 1907. Dear Sir,—I received the birds quite safe, and am very pleased with them.—Yours, Daniel Swift." Another customer writes:—"From the pair of birds I bought from you last season for £2, I bred nearly £20 worth, three of which turned out winners." This clearly proves the quality I send out. First orders, as above pairs.—Address, Geo. Cubley, 3, Standard-ter., Long Sutton, Lincs.

NOTICE, CALL OR WRITE
and inspect my Norwich. I have a splendid collection in all colours, except greens, and every bird is in the primest condition and feathered like silk; cocks, in full song, 7s. 6d., 8s. 6d., 10s. 6d.; hens, 4s., 4s. 6d., 5s., 5s. 6d.; all on seven days' approval; P.O. or deposit; note, inspection invited any time.—William Shaw, 97, Essex Road, Islington, London, N.

CHAMPION NORWICH.
Having selected my breeding stock, have a few pairs to part with, from 20/-; no odd hens; same strain as my winners cups, medals, etc.—Boydon, Peckham House, Peckham, S.E.

JOHN C. BARNES.
Having selected my own breeding stock, can spare few choice birds, well up in substance, true type, and of grand depth of colour, winner of silver cups 1901, 1902, 1904, 1905, 1906., price reasonable; approval; inspection cordially invited; stamp reply; pairs properly matched.
149, Duncombe Street, Walkley, Sheffield.

WICKS BROS., NORWICH,
offer grand pairs Norwich Plainheads, selected and matched for immediate breeding, 8/6, 10/6, 12/6, 15/-, 21/- upwards; ditto, cocks, 5/6, 6/6, 7/6, 10/6 upwards; hens, 3/-, 4/-, 5/-, 7/6 upwards. All on approval; quality unequalled compared with prices. Send for current price list and catalogue of live stock and all appliances, post free. Postal and Telegraphic Address: Wicks Bros., Norwich.

SILK'S CHAMPION NORWICH.
My name and fame as breeder of Norwich Plainheads is so well known to every fancier that my birds need no paper recommendation. I breed to sell. Most of the leading champions have been bred and sold by me, my vast business having been built purely upon recommendation, not on paper bounce. If you were disappointed last year with Norwich purchased elsewhere, try a pair from a strain of many years' standing. Success certain. Every pair on approval, money returned if unsatisfactory, or deposit with Editor. Satisfaction guaranteed. Champion pairs, 15s. 6d., 20s. 6d., 25s. 6d., 30s. 6d. per pair; some tip-top cocks and hens, yellow or buff, 7s. 6d., 10s. 6d., 12s. 6d., 15s. 6d. each. Don't risk unreliable strains, but send to the fountain head, or a season's work may be wasted. Remember, all on approval, willingly.
Judge A. E. Silk, *THE APIARIES,* **Whitstable.**

PAYNE & BENNETT.
All Norwich Canaries exhibited by us at the late Crystal Palace Show were claimed, thus showing the full value we are offering. Well selected stock pairs from own prize strain, from **8/6, 10/6, 20/-,** and upwards; Buff Hens **3/-, 4/-, 5/-,** and upwards. Yellow **4/-, 5/-, 6/-.** Crests, Cocks or Hens **12/6, 15/-, 20/-,** upwards. Crestbreds, Cocks or Hens, **7/6, 10/6, 20/-,** upwards. Give us a visit or trial order.
All Birds on approval or Deposit.
Satisfaction Guaranteed.
73, KNOWSLEY ROAD, NORWICH.

LOOK HERE!

I am anxious to remind you that I have the best stock of Norwich Canaries ever seen in one bird room, having over 500 pairs to select from (including the whole stocks of two noted exhibitors). I can offer you many this season's winners and pairs properly matched for breeding winners. I shall be pleased to send you any birds on seven days' approval, carriage paid. I yearly sell many thousands of birds, and give every customer satisfaction. I guaranteo to please you if entrusted with your order. I am now offering exceptional good value in typical Norwich cocks, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, and 25/- each. Hens, 4/-, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6, 12/6 each. Matched pairs, 8/6, 9/6, 10/6, 12/6, 15/-, 17/6, 20/- upwards. I receive many thousands of unsolicited testimonials, of which the following are samples:—"77, Belmont-st., Oldham, March 2nd, 1907. Received bird quite safe. I am more than pleased. It is worth a lot more than I paid you for it. Your honest and straightforward way of dealing is a credit to you. I can confidently recommend you to all my friends.—W. Mitchell, to Miss Storey." "36, Howden-rd., North Shields, March 4th, 1907. Received birds all right. There is every credit due to you. They are a first-class pair—exactly what I wanted. I shall recommend you to all friends.—R. Miller, to Miss Storey." "81, King-st., Cwm. Received Norwich hen in splendid condition. Many thanks for same and your prompt attention.—A. Giles, to Miss Storey." "Clyde House, Durham, March 3rd, 1907. I have instructed Editor to forward you the money for the birds received, which are quite satisfactory, etc.—J. Gregor, to Miss Storey." "44, Hamelton-st., Gorvan. Received bird safe, with thanks. I have seen many birds from England, but never such value as those sent by you. Wishing you every success.—W. Hayes, to Miss Storey." "27, Lemlec-st., Penzance, March 2nd, 1907. Received birds safe. Exceedingly good type. Highly satisfied.—J. Bounder, to Miss Storey." "Castleford, March 2nd, 1907. Bird arrived safe. It is a grand one. I am highly pleased with it.—R. Penn, to Miss Storey." "Lauriston, Falkirk, March 2nd, 1907. Bird arrived. I am highly pleased with it. Many thanks for your prompt attention to the order.—W. Cooper, to Miss Storey." "2, Windsor-ter., Kilbowie, March 3rd, 1907. Received bird in the pink of condition. I am well satisfied with the way you transact your business.—J. Garseadden, to Miss Storey." I have thousands similar to the above all open for inspection. New illustrated price list post free. Travelling cages, 2d. each. I send all Canaries, carriage paid, on seven days' approval, at my own risk.—Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

NOT WHAT WE SAY, BUT WHAT OUR CUSTOMERS WRITE.
Langdon Villa, West-st., Bromley, Kent. February 22nd, 1907.—The pair of birds arrived safely yesterday morning. I must congratulate you upon the exceptionally fine way in which you have turned them out, and thank you for your very kind and courteous letter, advice, and general treatment of the transaction. I like your method of business, and it is a pleasure to find someone in Norwich who is not too busy to attend to his customers in a kind and courteous spirit. It goes a very long way, at any rate with me, and I shall not overlook you when I am buying again.—Yours faithfully, F. E. Wright to Mackley Bros.
All Fanciers should write for our Catalogue, sent post free.

Notice! Notice!! Notice!!!
The largest importer of British and Foreign birds in England has just received a large consignment of wonderful songsters. Real St. Andreasberg Rollers, guaranteed pure note, including Nightingale, Woodlark, Titlark, and water-bubble runs, perfect notes, price 6/6, 7/6 each. A1 Schoolmasters, as sold by others at £1 and 25/- each, 8/- and 10/- each. Don't forget to give E. Powers a trial. The sole importer of this class of Canaries in England. No boast or bluff. Come and see our stock. The greatest show of birds in England. We have on hand some splendid house-moulted Bullfinches, in grand plumage and condition. Every bird a sure muler. Only 4/6 each; these are a wonderful bargain.—Just received 20 grand Siberian Crossbills. These are in splendid colour and feather, and in the pink of condition, price 2/- each while they last. Wanted a large supply of Yorkshire and Norwich Canaries, best price given.—Notice the address:
E. Powers, 91, Sclater Street, Shoreditch, London.

HARTZ Mountain Roller Cocks, -

ALL IN FULL SONG,
and Hens, both imported and Home-bred, in the finest breeding condition. I have the Largest Collection of **Choice Pedigree Roller Hens** ever got together in one lot. They comprise pure Seifert and Trute Hens, and I can honestly recommend these to all breeders wanting Reliable Breeding Stock to produce the best money can buy. You can give 10/6 or more, and cannot get better blood or stock. Can be seen.
IMPORTED—Trained Cocks, **8/6, 10/6, 12/6, 15/-, 20/-** and upwards; Hens, same strain, **3/6** and **5/-** each, pairs **10/6, 15/-, 20/-.** All on seven days' approval, cash or deposit.
HARTZ SINGING COCKS 6/6; Extra selected, with better notes, 7/6; pairs, 9/6. Strong Hens 2/3 each.
Home-bred (guaranteed), Trained Trute and Seifert Cocks, **10/6, 12/6, 15/-** and **20/-** each; Hens, guaranteed same strains, strong, healthy, and in the best of breeding condition, **4/6, 5/-** each. These have been purchased direct from the breeder and trainer, and can be recommended. Remember, it is no use breeding from good Cocks and common Hens if you want good results.
Untrained—Strains unknown, Cocks 5/6, 6/6, 7/6; Hens, 3/6.
Full printed instructions, how to keep in health and song, sent with every bird as for the past 30 years. Beware of copyists and their "catch" methods.
37, Victoria-st., Upper Bangor. February 26th, 1907.—Bird arrived quite safe. I must say we are very pleased indeed with him. He started singing as soon as unpacked.—N. Smith to W. Rudd.
Skegby-rd., Annesley Woodhouse. February 25th, 1907.—I received the bird safe, and had not had him five minutes before he started singing beautifully. I am very much satisfied with it.—Mr. Hayes to W. Rudd.
If you want to know about these beautiful and interesting songsters, send for my book
'Profitable Canary Breeding as Practised in Germany'
By Albert Rettich, Esq., author, breeder, and judge of the leading singing contests. Price 9d., or in larger type and gilt cover, 1/3; to be obtained from the publisher and sole owner of copyright, W. Rudd, or from the office of "Cage Birds."
See also my advt. on page 246.
W. RUDD, The Bird Specialist, **NORWICH**

ROLLERS & SINGING CANARIES—continued

MISS STOREY.

Miss Storey bas the finest and purest collection of genuine trained Rollers in England, every bird in full song by day and artificial light, singing their pure Roller song. Every bird is cold room bred and kept. These are the genuine Rollers (not cross-bred rubbish). My stock consists of high-class British bred Rollers, bred from and related to the best of contest singers and winners. Cocks, in full song, 15/6, 17/6, 20/-, 23/-, 30/-. A few extra special at 40/-, 50/-, and 60/-. Hens to match same, 4/6, 5/6, 6/6 each. Genuine trained St. Andreasberg Rollers, with full change of song by day and artificial light (no common German rubbish these), 8/6, 10/6, 12/6, 15/-. Pure Roller hens, 3/-, 3/6 each. Hartz Mountain Roller cocks, in full song by day and gaslight, very loud free songsters, 6/-, 6/6, 7/- each. Matched pairs for breeding songsters, 8/6, 9/6. The quality of my birds speaks for itself. I have many thousands of testimonials open for inspection, of which the following are a sample:—"11, Summerson-st., Hellon-le-Hole, March 2nd, 1907. Received Roller safe, in pink of condition. He commenced singing as soon as put into cage. He is really a beauty. I am more than satisfied with him.—R. Allen, to Miss Storey." "Front-row, South Shields, March 2nd, 1907. Received Roller in splendid condition. I am highly pleased with him. He is a beautiful singer.—J. Printers, to Miss Storey." "18, George-rd., Birmingham. Received Roller safely. I am more than pleased with it, being a very nice bird, and lovely singer.—T. Nuttall, to Miss Storey." Allow me to send you one or more birds on approval. You will then be convinced that I supply genuine birds at reasonable prices. New illustrated price list post free. Travelling cages, 2d. each. All Canaries sent carriage paid, on seven days' approval, at my risk. —Miss E. L. Storey, Crowle, Doncaster.

POWICK'S champion Yorksbires in all classes, the same strain as the winners at all leading shows, cocks, 7s. 6d., 10s. 6d.; hens 5s. 6d., 7s. 6d. each; pairs mated to breed winners, 12s. 6d., 15s. 6d., and 20s. per pair; no rubbish; ten days' approval.—Wm. Powick, Eastfield House, Dewsbury, Yorksbire.

HAVING selected our breeding stock, we find that we can spare a few splendid pink-eyed hens, four grand yellow hens, 5/- each; two buff-marked, extra, 7/6 each; one buff cock, 10/-; approval; deposit.—Bray and Charlesworth, Underbank, Old-rd., Holmfirth.

SELLING off, through working overtime all summer, twelve Yorkshires, four cocks, eight hens, all in good health and breeding condition, joiner-made rack, screwed together, 16 breeding cages to fit same, and large flight, all Mason's loose wire fronts, nest pans and baskets, seed boxes, drinkers, egg drawers, show cage, seed grinder, and all sundries; will sell the lot together or separate.—Aspinall, 22, Withington-st., Heywood, Lancashire.

LEACH AND SON, the Yorkshire breeders, have 20 pairs for sale at very low prices to clear before starting to breed, 10/- and 12/- per pair, worth nearly double; cocks 6/- and 7/-, hens 4/- and 5/-; P.O. or deposit; seven days' approval; stamp for reply.—41 and 42, Market-pl., Keighley, Yorkshire.

H. LINDSAY'S champion Yorkshires and Norwich Plainheads.—Having picked my own breeding stock, I have some grand birds for sale, same strain as my winners, cheap to clear, pairs, 15/-, 20/-; few grand buff cocks from 10/-; also good buff hens from 6/-; in breeding condition; inspection invited; stamp reply.—202, King James'-street, Sheffield.

THE old Yorkshire breeder's birds are best of quality, cold room bred, clears, ticked, yellows, or buffs, cocks, full song, 6/6, 8/6, 10/6; hens 3/6, 4/6, 5/6, 6/6; pairs, properly matched for breeding, 10/6, 12/6, 15/-; seven days' approval, cash or deposit.—Pickles, 5, Wardman-st., Keighley, Yorkshire. x268

MURGATROYD AND SON, breeders 21 years, runners up for Yorkshire Amalgamation 25 guineas challenge trophy, 1906, also winners Yorkshire Amalgamation challenge cup, 1905 and 1906. We have only a few pairs for disposal, cocks, long and stylish, hens, feathered to perfection. These are real bargains to clear; no rubbish; satisfaction guaranteed; four days' approval; stamp for particulars.—35, Lytton-rd., Girlington, Bradford.

GIVING up.—For sale, six pairs very nice Yorksbires, Cinnamons, yellows, buffs, 9/- a pair; four hens, three yellows, one green-splashed yellow, 3/6 each; 1905, 1906 cold-room bred; three four-compartment breeding cages, all alike, 9/- each; eight-compartment breeding cage, 15/-; all joiner made, new last year, fitted movable fronts, slides, egg pans, nest pans, drinkers, seeders; or sell lot £4 15/-.—Avis, 9, Alexandra-st., Kettering.

COWGILL'S YORKSHIRES.

Birds that I have sold have won over 40 1st prizes this season in the keenest of competition, which is proof of their quality. I have still some good ones for sale, for show, or stock; matched pairs from 15s. to 50s., cocks from 8s., hens from 7s.; approval; cash or deposit; stamp reply.—115, Washington Street, Girlington, Bradford.

NOTICE TO SHOPKEEPERS

and dealers.—I can supply you with grand long Yorkshires at wholesale prices; thousands in stock; write for price and particulars.—Joe Thomas, Amblerthorn, Halifax.

SPENCE'S YORKSHIRE AND NORWICH.

Special value, cocks, from 6/-; hens from 4/-; pairs, 10/6, 12/6, 15/-, 20/-, all colours; satisfaction guaranteed; seven days' approval, cash or deposit.—Spence, Breeder, Mount Pleasant, Norristhorpe, Liversedge, Yorks.

MUNDELL AND SON

Have for disposal some typical Yorkshire cocks from 15/-; hens from 7/6; feathered like wax.—6, Carlisle-pl., Bradford.

PRIZE-BRED YORKSHIRES.

Twenty typical cocks for immediate disposal, room wanted for breeding, 10/- each to clear; approval; same strain as our winners.—Ogden Bros., Ashwood House, Dudley Hill, Bradford.

Shackleton's Yorkshires.

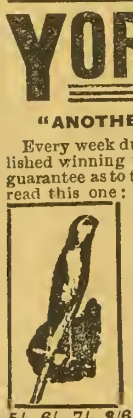
£21 Challenge Cup, 1903.
£21 Challenge Cup, 1904.
£21 Challenge Cup, 1905.
£25 Challenge Trophy, 1906.
Four Championship Diplomas Crystal Palace, 1903-4-5-6.

Other Trophies, Cups, Medals, &c. A list of which would be a mere superfluity of words. The above is ample proof that the "Poragon Strain" stands pre-eminent, and is undoubtedly the best and most reliable strain in the world. Having selected my breeding stock I have for disposal some choice stock birds, Cocks, Hens, or pairs. Prices reasonable. Three days' approval. Cold rooms. Stamped address, particulars.

The Paragon, Girlington, Bradford.

YORKSHIRES

"ANOTHER FIRST PRIZE WINNER."



Every week during this last six months I have published winning testimonials, which should be sufficient guarantee as to the quality I send out. For further proof read this one: "Baker-st., Creswell, near Mansfield, March 1st, 1907.—The hen you sent me won first prize last week. Thanking you for such a good bird. T. Pearson to J. Taylor, Frizinghall, nr. Bradford." Grand Yellow Yorkshire Cocks at 7/6, 8/6, 10/6, 12/6, 15/-, 20/- each. Buff Cocks at 6/-, 7/-, 8/6, 10/6, 12/6 each. All on full song, and standard length (some over). Clears, Ticked, Green Marked, and Cinnamon Marked Properly Matched Pairs for breeding winners at 10/6, 12/6, 15/-, 20/-, 25/- per pair. Typical Yellow Hens at 4/-, 5/-, 6/-, 7/-, 8/6 each. Buff Hens at 3/6, 4/6, 5/6, 7/- each. All ready to nest. Cold-room bred and kept. Healthy and feathered like wax. Travelling cages, 3d. extra. All on 7 days' approval.

CRESTS & NORWICH.

Massive large Buff Norwich Cocks at 6/-, 7/6, 8/6, 10/6, 12/6 each. Yellow Norwich Cocks at 7/6, 8/6, 10/6, 12/6, 15/- each. All on full song. Grand properly Matched Pairs for breeding winners at 10/6, 12/6, 15/-, 20/-, 25/- per pair. Clears, Ticked and Variegated, large chubby Buff Hens at 3/6, 4/6, 5/6, 6/6, 8/- each. Yellow Hens at 4/6, 5/6, 7/-, 8/6 each. All ready to nest, and cold-room kept. Also Champion Crests at 15/-, 18/-, 20/-, 25/-, 30/- per pair, matched to breed, show specimens. Large Crested or Crestbred Cocks at 7/6, 8/6, 10/6, 12/6, 15/-, 20/- each. Also some very good Crested Hens at 6/6, 8/-, 10/6, 12/6, 15/- each. Crestbred Hens at 5/6, 7/- 8/6, 10/6, 12/6 each. "Barnett's," "Joyce's," and "King's" strains. Illustrated Price List post free. Travelling cages 3d. extra. Seven days approval. Only and old address—

J. TAYLOR,

9, Northdale Road, Frizinghall, BRADFORD.

WINNERS CHAMPIONSHIP.

I earnestly ask you for trial order to prove I give satisfaction; sent on week's approval at my own risk, cash or deposit. I claim to have best collection in West England, and sold some most prominent on show bench, which wins challenge cup and medals; this strain winners 200 prizes; Yorkshire cocks, standard length, feather like wax, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-; hens 3/6, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6, 12/6; clears or ticked pairs 8/6, 10/6, 12/6, 15/-, 20/-; Sib bred cocks or hens, for light muling, same price.—C. Baker, Herbert-st., Bedminster.

LET'S SEE.

I feel sure that I have the birds you are looking for. I have many hundreds of upstanding Yorkshires of the correct type, standard length, tight in feather, exactly the birds you want to breed with. I shall be pleased to send you any of my birds carriage paid, on seven days' approval. I guarantee every customer satisfaction. Tight-feathered upstanding Yorkshire cocks, in full song, 6/6, 7/6, 8/6, 10/6, 12/6, 15/- each. Racy Yorkshire hens, 3/6, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6 each. Properly matched pairs, 8/6, 10/6, 12/6, 15/-, 17/6, 20/- per pair. A few winners at reasonable prices. Send me an order; it will convince you and your friends that I give the best value money can buy. Just read one or two samples of unsolicited testimonials:—"Longwith, near Mansfield. March 8th, 1907.—I beg leave to thank you for the splendid bird you have sent me. Its quality is superior to any bird I have ever bought before. Thanks for prompt dispatch.—J. Padier to Miss Storey."—"Delight Bank, Dipton. March 8th, 1907.—Received Yorksbire hen safe and well. I am more than satisfied with it, and will recommend you to all my friends.—W. Cransbon to Miss Storey."—"Owen-st., Atherston. March 8th, 1907.—Kindly accept my testimony as to your straightforward dealings in your business. Mr. Cooper sent for two pairs of your birds, one for himself and one for me. They have turned out excellent. I shall recommend you with confidence to anyone requiring a good bird. Wishing you every success.—H. Charnell to Miss Storey."—"93, Wisemoor, Walsall. March 8th, 1907.—Bird arrived in excellent health. No man could wish for a better bird at working men's prices. Wishing you every success.—J. Cannbell to Miss Storey."—"Dundonaldden, Cardenden, Fife. March 8th, 1907.—Thanks very much for the bird received to-day in the best of health. Good shape, and an excellent songster.—J. Pollock to Miss Storey."—"1, Ann's-rd., Heeley, Sheffield. March 8th, 1907.—I am greatly pleased with the bird you sent me. I send you order for two more, as I am sure you are worth patronising for your straightforwardness.—C. Wood to Miss Storey."—I have hundreds of similar letters open for inspection, and you will prove the same satisfaction yourself if you favour me with your order. I send all my birds on seven days' clear approval, carriage paid, at my own risk; new illustrated price list free; neat travelling cages, 2d. extra.—Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

What Others Say.

50, Park-st., Mountain Ash. March 11th, 1907.—Dear Sir,—Bird arrived quite safe, and I am perfectly satisfied with it. I shall recommend you to all my friends. Yours truly, J. Roberts to J. B. Rees.

Newbridge, near Newport. March 12th, 1907.—Dear Sir,—Received bird last night all right. Quite satisfied; it looks a beautiful little fellow. Began singing this morning.—Yours, David Lewis to J. B. Rees

POSTAL ORDERS PLEASE.

Owing to the new Post Office Regulations respecting the use of stamps upon Postal Orders, we are reluctantly compelled to state that in future our rule re **sending Postal Orders as far as possible instead of stamps** *must be strictly enforced. Advertisers unable to obtain Postal Orders must remit an extra halfpenny with every four penny stamps.*

SAMUEL DEAN, 24, Crossley Street, Gt. Horton, Bradford, Breeder and Exhibitor of high-class Yorkshire Canaries, including Greens. x259

THE CHAMPION WINNING STRAIN.
Winner of the Championship Diploma, Crystal Palace, 1906. Having about 60 pairs, we have decided to clear them out for a speedy clearance at 15s. to 20s. per pair, cocks standard length, hens feathered like box, sure to give satisfaction; seven days' approval, P.O. or deposit; stamp reply.—Gill and Pickup, 1, Cragg Street, Great Horton, Bradford. x268

KNIGHT'S YORKSHIRE AVIARIES.
Desiring to clear by end of month all my high-class Yorkshires (except our selected breeders), I offer 70 pairs properly matched, unrelated, at 12/6, 15/-, 20/-, 25/-, to 30/-; single cocks and hens proportionate; all cold-room bred, reared, and kept; all approval, cash or deposit. Few exhibition specimens from 20/-, 30/-, and 40/- each. Before purchasing elsewhere send 2d. in stamps for my newly published booklet, "The Whole Art of Colour Feeding and Training Yorkshire Canaries." Remember old address, Jonas Knight (author of "The Yorkshire Canary: Its Breeding and Management."—Allerton, Bradford, Yorkshire.

BENNETT'S
Champion Yorkshires, highest awards, ten guinea challenge and other cups, Palace, etc.; finest strain in the world; few properly-matched pairs cheap, same blood as those supplied by me to England's most successful exhibitors of Yorkshire Canaries; price list free.—59, Waverley Road, Great Horton, Bradford.

WILCOCK'S YORKSHIRES, NORWICH.
I can supply you with either Yorkshires or Norwich Plainheads, for either stock or the show bench, all bred from my winners at all the leading shows, no better blood in the Fancy, pairs from 12s. 6d., 15s., 20s., 30s.; cocks or hens, from 7s. 6d., 10s. 6d., 15s., 20s. each; 3 days' approval.—14, Chapel Street, Eccleshill, Bradford, Yorkshire.

CHAMPION YORKSHIRES.
Fiue typical birds, ticked and clears, all clean moulted and colour fed; buff Yorkshire cocks at 6/- and upwards; yellow cocks 7/6 upwards, all on song; hens, 4/6, 5/6, pairs 10/6 upwards.—A. Smith, East Morton, nr. Bingley, Yorks. x263

Hudson's Champion Yorkshires
are what you want to breed your own winners. Bred from or related to winners. Few green marked, Cinnamon marked, and clears, in matched pairs, at 10/6, 12/6, 15/-, 17/6 per pair; single cocks, for stock or song, at 7/6, 8/6, 10/6; hens, yellow and buff, 5/6, 6/6, 7/6; all cold-room bred and kept, ready for breeding. Remember my terms, four days' approval; stamp reply.—Hudson, Confectioner, Thackley, Bradford.

Bailey and Swanger's Yorkshires
have once more taken the very highest honours at the Crystal Palace, winning championship best bird, also champion diploma best bird, also medal best bird; in addition, we have won the Y.C.C. £21 cup, against all comers two years running; what better proof of our stock, and every bird our own strain. Our motto is quality, not quantity. Send stamp for prices and particulars.—24, Sandy-la., Allerton, Bradford.

CHAMPION YORKSHIRES.
SPECIAL Notice.—Write or call at any time and see my splendid lot of long, slim, straight, upstanding Yorkshires; every bird in the primest condition, with plumage like silk; every cock warranted singing; all cold room bred and kept. I have them in all colours except Greens, and all on seven days' approval; cash or deposit; Yellow cocks, orange-yellow, 8s. 6d., 9s. 6d., 10s. 6d.; Buffs, cocks, 7s. 6d., 8s. 6d., 10s. 6d.; Orange-Yellow hens, 4s. 6d., 5s., 5s. 6d.; Buff hens, 3s. 6d., 4s., 4s. 6d.; inspection invited.—Shaw, 97, Essex Road, Islington, London,

THE SYSTEM WHICH STANDS THE TEST.

E. TAYLOR, BIRD SPECIALIST,

3 & 7, Thornton Road, BRADFORD.

Experience is unanimous in its declaration that it is a difficult thing to play fast and loose with principle, and score an ultimate and continuous success. Experience might not err if it went further and said that such an achievement was an impossibility. **E. TAYLOR'S** success is founded on a basis of **7** points.

1. **E. TAYLOR** says what he **means.**
2. **E. TAYLOR** means what he **says.**
3. **E. TAYLOR** sells only THE BEST BIRDS, SPECIALITIES, AND APPLIANCES.
4. **E. TAYLOR'S** services are appreciated by all discerning Buyers.
5. **E. TAYLOR'S** Buyers never forget to advertise the benefits they have secured, and always remember to bring their friends where they have been ably served themselves.
6. **E. TAYLOR** prefers a moderate profit and an established customer, to an exorbitant profit made from one who will never return; and
7. **E. TAYLOR** forwards HIS Catalogue to all enquirers enclosing two stamps to cover postage, and when received it is voted something worth looking at. Have **you** got this Catalogue? If not, let me send you one immediately.

TRAVELLING CAGES, with Food and Nourishment for the journey, 3d. EXTRA.

3 GOOD REMEDIES.

Songsterdyne.
An absolute cure for **Colds, Wheezing,** and **Asthma** in all Cage Birds. It supersedes all other known remedies in being at once safe, simple, efficacious, and inexpensive.
7d., 1s., and 3s. per Bottle, post free.

Canary Tonic Drops.
Are specially useful for **Weakness, Sweating on the Nest,** and **Drooping in the Moulting Season.** If given in the drinking cup once or twice a week for breeding birds, it will keep them in a high order of health. It will be found particularly useful during the show season in keeping exhibition birds in condition.
7d., 1s., and 3s. per Bottle, post free.

Soft Moult Cure.
The only remedy before the Fancy for this disease alone. A few drops in their drinking water will cure the most severe case.
7d., 1s., and 3s. per Bottle, post free.

Full detailed Price List sent post free on application, but if you want my large Descriptive 104-page Catalogue of Cages, Aviaries and all Bird-room Requisites, send Two Stamps to cover postage.

VARIOUS CANARIES—continued.

YOU WANT VALUE.

I not only endeavour to give it, but am in such a position that I can give better than is procurable elsewhere. A trial proves this fact.

The following up-to-date expressions of satisfaction prove it. These are not saved up examples, nor yet isolated cases (mere "flukes"), nor are they "baited" for.

FEEDING HENS PROPER, not little German wasters or Antwerp do. 2/9, 3/6; large 4/6.

NOTE.—All Amateurs should try my Special Matched Pairs of Prize-bred Norwich Plainheads at 10/6, 12/6, 15/-, and 20/-. Crested ditto, 15/-, 20/-, 25/- and 30/-. Yorkshires, 12/6, 15/-, 20/-. These are the *BEST VALUE* ever offered.

TRAVELLING CAGES 3d. EXTRA.

Everything, etc.

4, Teal-st., Roath, Cardiff. March 9th, 1907.—Will you please send catalogue? I must say that everything I have had from you has given the utmost satisfaction.—G. A. Orana, to W. Rudd.

Best and safest.

6, Court A, Willow-st., Leicester.—Please send bottle of Asthmarine, also one tonic. Yours seem to be the best and safest medicines I have yet tried.—W. H. Townsend, to W. Rudd.

Honest money's worth.

Kibblesworth. March 6th, 1907.—Birds came all right, and I am well satisfied. I have honest money's worth. Cock was singing two hours after arrival.—J. Morton, to W. Rudd.

25, Grafton-ter., Malden-rd., Kentish Town, London. March 6th, 1907.—Very many thanks for your kind attention. Birds arrived in splendid condition, and I am very pleased indeed with them. I have tried three different places, and they soon all died.—F. Watson, to W. Rudd.

9, Leigh-park, Paisley. March 5th, 1907.—Birds arrived all right. I am well pleased with them, especially the Yorkshire hen. They are both good value for money.—J. McGrath, to W. Rudd.

Finest he ever heard.

8, King Edward-ter., Rhymney, Mon. March 6th, 1907.—Bird arrived safely, and in good condition. He started singing within five minutes of being unpacked. Splendid Roller—finest I ever heard.—T. H. Lloyd, to W. Rudd.

More than expected.

43, Harvey-rd., Camberwell, London, S.E. March 4th, 1907.—I received the pair of Norwich Plainheads in perfect condition, and I am very pleased with them. They are more than I expected. Your Eggertine is also a very good food.—A. Brown, to W. Rudd.

Brooke's-lane, Whitwick, Leicestershire. March 8th, 1907.—I received bird on Saturday. He began to sing before he had been here many minutes. I shall recommend you for straightforward dealing.—W. Eames, to W. Rudd.

Sceptics kindly read this.

5, Back-st., Renton, Dumbartonshire, March 3rd, 1907.—I received the bottle of Asthmarine all right, and had a Scotch Fancy hen that I thought would die before the bottle came, but it has almost completely cured it in three or four days. I could recommend Asthmarine to anyone.—J. Hamilton, to W. Rudd.

Very nice bird.

St. Leonard's-on-Sea. March 7th, 1907.—Goldfinch received quite safe, in good condition. A very nice bird.—A. Know, to W. Rudd.

Not equal it anywhere at double the price.

Bayswater, London, W., March 7th, 1907.—The bird came duly to hand this morning. I am much obliged for your prompt attention to my small order. The bird is a beauty, in excellent health and condition, and I don't think I could equal it anywhere at double the money.—M.N., to W. Rudd.

Best value ever offered.

5, London-pl., Folkestone, Kent. March 6th, 1907. The Yorkshire Canaries arrived quite safe, and am very pleased with them. They are the best value ever offered. Thanks for prompt attention.—R. Dorrell, to W. Rudd.

A mark of appreciation.

Hull City Asylum, De la Pale, Willerby. March 7th, 1907.—The bird arrived safe and sound, and is a fine specimen, in excellent condition. I thank you for your kind and prompt attention, both now and in the past. You invest my money so well that I cannot afford to risk it in any other way.—J. Anderson, to W. Rudd.

85, Ympsynon-rd., Trealaw. March 7th, 1907.—I received bird and cage in grand condition. I am well pleased with both, and think them dirt cheap. In a shop down here it would cost about 7/6. I have sent out all the papers I had from you, and people say they are going in for some Canaries while they can get them, and not bundles of feathers, as we get in some places. What you say about the German hen trick is quite true, because I have been caught the same way. I was talking to a man the other day, and he thought if he sent to you it would be the same, till I showed him my pair, and then he asked me to lend him your price list. I am glad to know of a man I can recommend.—F. R. Underhill, to W. Rudd.

"EGGERTINE."

It is the best, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for breeding as nothing else will. This during the past twenty years has been proved by thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size.

See my advertisements under respective headings, or full Current Price List FREE on receipt of address, also post free catalogue and full particulars of my

Lists.—De Von, 114, Bethnal Green-rd., London.

I CAN offer the following birds, all in full plumage:—Twelve pairs of Blue-winged Love Birds, 3/6 pair; Lavender-headed Love Birds, 3/- pair; real Australian-bred Budgerigars, every bird clean, full feathered, and been in outdoor aviary all winter, sure breeders, 6/6 pair; Cockatiels, aviary bred, 10/- pair; Indian Parrakeets, 10/-; true pair splendid Cockatoos (Roscy), 8/6 each; Talking Amazon Parrots, finger tame, two years old, price £1 10/-, worth double; Saffronfinches, true male and female, 4/6 pair; Cardinals, 5/6 each; Silky Cowbirds, 4/6 each; Siberian Bullfinches, extra large birds, and fine plumage, 5/6 each; German tame Bullfinches, feed out of mouth, sure breeders, 5/- each; Cordon Bleus, 3/- pair; Orange Cheeks, 4/- pair; Ribbonfinches, Weavers, Javas, Avadavats, 3/- pair.—E. Powers, 13, East-rd., South Wimbledon, London.

PARROTS. PARROTS.

Parrots, Parrots.—Splendid young Greys, full wings and red tails. Notice to bird dealers: We supply you at wholesale prices, and don't advertise single birds and cages in your district. We leave that to you. Parrot cages of every description made by experienced workmen.—Note the address: Wright, Trading Menagerie, 43, Park-rd., Liverpool.

PARROTS. PARROTS.

For genuine Grey Amazon and plain Parrots, on four weeks' trial, our risk, before paid for, send to the West Riding Aviaries, Castleford.

BOOKLET FREE.

FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

BLACK, NATURALIST, SUNDERLAND.

Satisfaction and safe delivery guaranteed.

Daley, Tithebarn Street, Liverpool.

PARROT LOVERS

Should send post-card immediately for our new enlarged book entitled "Parrot Prattle" (registered copyright, infringers and imitators will be proceeded against). This book contains 120 pages of very interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

Note Address—

121, LEMAN STREET, LONDON, E.

HAVE YOU SEEN OUR

Picture Post Cards of Canaries?

To breed Budgerigars successfully you must have the **"Improved Secure" husks.** All bird fancying papers have advised their readers to prefer them, because other kinds come to pieces and the young fall to the floor and die and this is just why the **"Improved Secure" husks** have been **"celebrated"** for the last 16 years. They remain unequalled, competition and comparison always increase their popularity; the principal Zoo's, Parks, and breeders employ them, and "Cage Birds" has said:—"They are far superior to the old husks," so beware of worthless substitutes. Price **4/6** dozen, smaller quantities **5d.** each. Pamphlet, entitled "Budgerigar Breeding," post free on application. Read it before buying husks. Superior box nests for Cockatiels etc., **1/6** each.

HARPER, Upper Villiers Street, WOLVERHAMPTON.

THE Budgerigars BEST

My noted Greens, strong and ready to Nest, Hens 3/6, Cocks 2/6, Pairs 5/6, Selected 6/6, Yellow Hens, 6/-, Cocks 5/-, Pairs 10/-, Selected 12/-. Any number of Hens supplied. Cockatiels, aviary bred, 10/- pair. With every pair I give Free 2 "Unbreakable" Husk Nests. After seeing these you will use no others. Remit 6d. to cover postage.

NESTS! NESTS!!

For all kinds of Foreigners. The celebrated Unbreakable Cokernut Husk Nests 3/-, 4/-, 5/- dozen. Sample Set, 3 sizes, carriage paid 1/6. Cokernut Shell Nests for Canaries, Finches, Waxbills, etc., 4/- and 6/- doz. Sample pair, carriage paid, 1/-. Cockatiel and Parrakeet Nest Boxes. "The Ideal." When all other sorts fail try these, sure to succeed. 1/- each. Superior Varnished, 1/6. Satisfaction guaranteed, or money refunded.

Pearson, Budgerigar Specialist, Greenwich Market.

Advertisements continued on page 264.

SINGING CONTESTS.

LEIGH.

Open contest for time singing, held at the Colliers' Rest, Westleigh Mill, Leigh, on March 9th, when 41 of the best Linnets from Warrington, Wigan, Blackburn, Leigh, and other districts competed for six good prizes. There was some grand singing. Timekeepers were D. Armitage (Warrington), F. Gibbins (Leigh), and P. Wailin (Leigh). First prize, F. Rowland; 2nd, T. Armitage; 3rd and 4th, T. Barker. Dead-heat between J. W. Jones and J. Ellison (Leigh).—J. W. Jones.

AT BRADFORD.

The usual week-end contest took place at the Exchange Inn, Wakefield-rd., Bradford, when the landlord gave three good prizes, and some capital Linnet singing was heard. There was a good entry. Judges: Frank Burton and W. Day. 1, 2, H. Allen; 3, F. Morrell. The company was highly satisfied with the winner's birds, and loudly applauded as he took his prizes.

Our week-end Linnet contests are an increasing success, and don't forget it. Bumping entry of 25 birds, and some class singing:—Mr. D. Lyles's "Nicodemus," 1st; Mr. F. Morrell's "Joey," 2nd; Mr. F. Burton's "Coal-Drops," 3rd; Mr. Simmond's "Bob Tail," 4th. Many good birds missed. Mr. Charlie Tarlton judged.—F. Stothard, Sec.

AT LEEDS.

An open Linnet singing contest was held on March 9th, at the Fisherman's Hut Hotel, Ellerby-lane, Leeds, when 16 selected birds (including the three Leeds champions) competed for three prizes given by Mr. C. Tobin. Result:—H. Allen, 1st; J. Clark, 2nd; C. Whittaker, 3rd. Judges: Messrs. Jackson, Towers, and Naylor. Our next Linnet Contest will take place on Easter Monday, open to all England; £3 will be given in prizes.—G. Cockroft, Hon. Sec.

The Prince Albert L.A. week-end contest, on March 10th, when 16 picked birds competed for three good prizes given by Mr. J. R. Saynor. Judges: J. Binner and E. Wood. 1st, H. Allen; 2nd, F. Allen, 3rd, W. Dean. Second Annual Linnet Singing Contest held at the above house on Whit-Tuesday. Anyone wishing to join may do so by applying to E. Wood, Sec., 41, Lincoln Field-row, Newtown, Leeds.

Week-end contest held at Skinners' Arms, Buslingthorpe-lane; 19 birds competed for three good prizes given by the landlord, when some good singing was heard. Judges: F. Raper and T. Summers. 1, F. Gatley; 2, S. Kirk; 3, J. Clark.—C. Hunt, Sec.

A Linnet singing contest will take place on Easter Monday at the Fisherman's Hut, Ellerby-lane, Leeds, open to all England, when the proprietor, Mr. C. Tobin, will give prizes to the value of £3; entrance fee, 1/-, to be sent to the above house.—ADVT.

Quality Linnet singing contests took place at the "Old King's Head," Shannon Street, Leeds. On Saturday 17 selected birds competed for three good prizes. The birds were in splendid condition, and gave a grand display. 1st prize, D. Walls; 2nd, T. Stead; 3rd, H. Hayes. Judges, J. Melia and W. Naylor. The usual Sunday contest also took place, 23 birds competing for four good prizes. There was some spirited singing, to the satisfaction of all present. 1st, C. Whitaker; 2nd, 3rd, A. Pearson; 4th prize was shared by J. Melia and P. Hoban. Judges, W. Naylor and D. Clegg.—J. Melia, Hon. Sec.

Linnet singing was very abundant at the "Old Bird House," King's Head, Shannon Street, this week-end, no fewer than three contests and two matches having taken place. In the first contest 16 selected birds competed for three good prizes given by the landlord, Mr. J. Booth. The birds were in splendid condition, and gave a good account of themselves, each bird in turn giving a grand display of Linnet-singing. Result, first prize, F. Allen; second and third prizes were shared by A. Hodgson and F. Allen. There was a heated discussion as to the merits of the birds which ended with another contest. Result: First, A. Hodgson; second, F. Allen. On the 17th, the usual contest took place, 18 birds competing for three good prizes. Result: First, C. Whitaker; second T. Stead; third, A. Pearson. After the contest a discussion ensued as to the merits of several birds, which resulted in two matches. In the first match, C. Whitaker beat Hodgson; in the second match, T. Stead beat C. Whitaker. Judges, on the 16th, T. Crane and W. Naylor; on the 17th, J. Melia and T. Crane.—J. Melia (Hon. Sec.), T. Stead (Assist. Sec.).

THE SHOWS.

EBBW VALE AND DIS. C.F. & F.S.

First Members' Show held March 2nd, at the Central Hall. There was an excellent entry of about 120 cage birds, and competition was keen. The Hall was packed with interested spectators, and the event was a great success. The arrangements left nothing to be desired. Mr. Anthony, the secretary, informed us that the Society had a membership of 120, and he expects a good many more to join. There is evidently a great deal of enthusiasm amongst the members, which speaks well for the future. Mr. John Morgan, of Ebbw Vale judged, and gave general satisfaction. YORKS. COCKS (15): Some exhibits of great merit; 1, 2, spl, Parffit and Wheeler; 3, Walter Jones. HENS: 1, J. Morgan; 2, Parffit and Wheeler; 3, W. Jones. NOR. COCKS (14): A few birds of merit in this class; 1, spl, Parffit and Wheeler, with a good bird; 2, J. Genner, with another; 3, J. Jones. HENS: 1, J. Genner; 2, 3, A. Monks. The competition in the British birds was very keen. GOLDFINCHES (a splendid class of 24): 1, J. Jones, a very good Finch; 2, W. Date; 3, G. Cox. LINNETS (11): 1, J. Jones; 2, J. Colbourne; 3, W. Date. A.O.V. FINCH (10): 1, Parffit and Wheeler; 2, G. Watson; 3, W. Bethell. LARGE: 1, Colbourne; 2, D. Edwards; 3, J. Cameron. FOR.: 1, 2, spl, W. Y. Thomas; 3, W. H. Lewis. MULES: 1, H. Love; 2, T. Thomas; 3, W. Rees.

WALTHAMSTOW F.A.

Members' Show of cage birds held at Headquarters, on March 8th. Entries turned up well, considering the time of year. Some very good Yorkshires were staged, and Norwich were especially strong, both in numbers and quality. British were also a fine lot, many of them being known winners. Mr. F. R. E. Handscombe won the special for best Canary, with a clinking yellow Norwich, and Mr. A. Baldry that for best British, with a lovely Thrush, in superb condition. Mr. J. Dobson judged, his awards giving every satisfaction. YORKS. YELL. (5): 1, B. F. Forse; 2, A. B. Forse; 3, Morris Bros.; res., Rolph. BUFF (8): 1, Morris Bros.; 2, res., B. F. Forse; 3, hc, A. B. Forse; vhc, c, Rolph. HEN (5): 1, 2, B. F. Forse; 3, A. B. Forse; res., vhc, Rolph. NOR. YELL. (10): 1, spl, Handscombe; 2, res., Marley; 3, c, Carr; vhc, Vincent (2); hc, Williamson, Mardell. BUFF (11): 1, 2, 3, Carr; res., vhc, Collier; vhc, Handscombe; hc, Marley; c, Williamson. NOR. HEN (12): 1, Williamson; 2, Handscombe; 3, res., vhc, Marley; vhc, B. F. Forse; hc, Mein, Vincent; c, Collier. MULES (4): 1, Morris Bros.; 2, 3, res., Ulyatt. GOLDFINCH, ETC. (5): 1, 3, Marley; 2, Voss; res., Ulyatt; vhc, Hellens. LINNET (4): 1, Marley; 2, Morris Bros.; 3, Baldry; res., Hellens. A.O.V. FINCH (8): 1, 3, res., vhc, hc, Hellens; 2, Marley; c, Morris Bros. INSECTIV. (2): 1, spl, 2, Baldry.

BRANDON B.B.S.

This young society held a successful show on February 28th, open to West Cork. After paying all prize money and expenses a balance of 17s. 9d. remains in hand. It is hoped to hold a show, open to Ireland, next year or earlier. The judges were J. W. Lee, E. C. Dawson, and George Webster, jun. Their awards were received with general satisfaction. The arrangements were well carried out under the direction of the Hon. Sec., Mr. E. C. Dawson. A.V. CAN., COCK (13): 1, Knight, nice Yorks, bit flat on head; 2, Barrett, neat ticked yell. Nor. Plainhead, a little more size and would be hard to beat; 3, Riordan, yell. Crested Nor.; res., Turpin, buff Nor. Plainhead, if washed would have won; vhc, Wm. Good, Ballylanglcy; hc, Dowling; c, Lane. HEN (7): 1, 3, W. Good, nice York. and Nor., Yorkie leading; equal 3, Dowling, neat Yorks., not well shown or would have gone up one. MULE OR HYB. (13): A grand class; 1, res., Cahill, two nice dark buff Goldie-Canary Mules, largest bird leading; 2, Bearc, Linnet Mule, grand size and markings; 3, Regan, buff Goldie Mule, best in class, fine condition, but wants more size; vhc, Riordan, nice yell. Goldie Mule, wants colour-feeding, good quality; hc, Barrett. GOLDFINCH (17): Strong class; 1 2, vhc, medal, Wm. Good, a nice team; 3, Riordan, grand Finch, badly staged, wanted washing; res., J. Sullivan, big slashing Finch, steady as a rock, grand blaze, but for damaged flights would have won, hard lines; hc, Shinkwin; c, Murphy. All good Finches, well worth their places. No. 6, J. Giles, lovely Finch, but very wild. LINNET: 1, P. Whelton, small, good, all round bird, in grand condition; 2, J. Sullivan, nice dark cap, bold and steady. BULLFINCH: 1, Master Travers, big house moulted fellow, a true Bullic, wants some beating; 2, Shinkwin, good quality and colour, small; vhc, Iles, grand hen. A.O.V. BRIT. FINCH (4): 1, res., Jack Giles, Greenfinch and Chaffinch respectively. SISKIN, TWITES, ETC. (11): 1, M. Donovan, lucky Siskin; 2, Wm. Good, fine big field moulted Redpoll, blaze of colour; 3, Master Tucker, grand house moulted Redpoll, good bib and no better marked, a wee bit small; vhc, Riordan; hc, Powell; c, Bright; all Siskins. BLACKBIRD, ETC. (5): 1, J. O'Callaghan, Thrush, a beauty, hard to find fault with, staged in the best possible condition; res., Morley, Thrush, not so well marked; vhc, Turpin, Blackbird, wild; hc, O'Callaghan.

PRESTON O.S.

Show and Judging Competition held at Headquarters, March 5th. Two classes were provided—Norwich and Yorks. pairs for novices, a medal being given for the best matched pair; and some exceptionally good pairs were staged by Messrs. Dunn, Leeming Bros., Haworth, Knowles, Leed, Livsey in Norwich, and Parkinson, Leed, Livsey in Yorks. Mr. W. Sherrington judged, and his awards were well received. The judging Competition was keenly contested, Mr. F. Issott winning by a very small margin. Awards.—Norwich Pairs: 1, Dunn; 2, 3, Leeming Bros.; 4, Haworth; vhc, Knowles; hc, Leed; c, Livsey. Yorks. Pairs: 1, medal, Parkinson; 2, Leed; 3, 4, Livsey.—J. W. Clemінson.

CAMBRIDGE C.B.S.

Table show held at the Black Swan Hotel, Guildhall Street. The classes on this occasion were confined to British birds. There was a large attendance of members, and the entries far outnumbered those of any previous show of this description during the season. The special for the best bird in the show was won by Mr. W. Rogers with a smart Goldfinch. Mr. F. Doggett judged, and his awards gave every satisfaction. GOLDFINCH: 1, spl, Rogers; 2, Bye; 3, Gawthorpe; hc, Cartwright; c, Lambert. BULLFINCH: 1, spl, vhc, King; 2, Bullock; 3, Lambert; hc, Ridgewell. LINNET: 1, spl, 3, King; 2, Bye; vhc, Morley; hc, Lambert; c, Wood. GREENFINCH: 1, spl, Ridgewell; 2, Smith; 3, Roff; vhc, hc, Bye. A.O.V.: 1, spl, Lambert; 2, Ridgewell; 3, Roff; vhc, hc, Smith. BEST BIRD: Rogers (Goldfinch). AMATEUR JUDGING COM.: 1, Rogers; 2, Bateman and Ison (tied).

BRADFORD (WEST) C.B.A.

Members' Show, March 2nd. About eighty birds were staged. Mr. J. Wilkinson, of Great Horton, judged. CL. YELL. YORKS.: 1, 4, Crabtree; 2, Murgatroyd and Son; 3, Helliwell; vhc, Bennett; hc, Turner; c, Cooper. CL. BUFF: 1, Cooper; 2, Crabtree; 3, Inman; 4, Bolton; vhc, Mail; hc, Wallhank. TKD. YELL.: 1, Wood; 2, Cowgill; 3, hc, Crabtree; 4, Pratt; vhc, Turner; c, Murgatroyd and Son. BUFF: 1, Murgatroyd and Son; 2, Bennett; 3, 4, Bolton; vhc, Cowgill. UNMARKED: 1, Crabtree; 2, Helliwell; 3, Pratt; 4, Bolton. CINN. MKD. YELL.: 1, Wood; 2, Wallbank; 3, Pratt. BUFF: 1, Murgatroyd and Son; 2, Cooper; 3, Bennett; 4, Cowgill. YELL. HEN.: 1, Murgatroyd and Son; 2, Helliwell; 3, Jewitt; 4, vhc, hc, Cooper; c, Mail. BUFF: 1, Helliwell; 2, Mail; 3, Pratt; 4, Cooper; vhc, Wood; hc, Turner; c, Wallbank. NOR. A.V.: 1, Stead. BRIT. A.V.: 1, 2, 3, 4, Inman; vhc, Cowgill.

CHESTER AND DIS. C.B.S.

Monthly meeting March 5th, at the Boot Inn, Chester, Mr. F. S. Moore (president) in the chair. A most successful British and Pair Show was held. There were 57 entries, and an excellent class of birds was staged. Messrs. Whitlow and Crane judged Canaries, and Mr. Whitlow, assisted by two members, the British birds. YELL. YORKS. COCK AND BUFF HEN (7): 1, Red; 2, Wright; 3, vhc, T. Jones; hc, Walley; c, Bailey. BUFF COCK AND YELL. HEN (9): 1, 2, T. Jones; 3, Bailey; vhc, Wright; hc, Walley; c, Red. YELL. NOR. COCK AND BUFF HEN (3): 1, 2, T. Jones; 3, Woodcock. BUFF COCK AND YELL. HEN (6): 1, 2, vhc, T. Jones; 3, c, Red; hc, Woodcock. A.O.V.: 1, T. Jones; 2, Wright. MULING PAIR (5): 1, Wright; 2, 3, Stovin; vhc, hc, D. Jones. GOLDFINCH (7) 1, 3, hc, Crane; 2, Lloyd; vhc, Stovin; c, Woodcock. BULLFINCH (4): 1, Red; 2, Lloyd; 3, vhc, Crane. LINNET (9): 1, 2, vhc, Crane; 3, Woodcock; hc, Red; c, Ellis. A.V. BRIT. HARD. (5): 1, 3, vhc, hc, Crane; 2, Lloyd. SOFT. (2): 1, 2, Crane.—A. J. Red, Hon. Sec.

HULL C.B.S.

Meeting held March 4th. Five new members were elected, and, after a long and pleasing discussion, it was decided to purchase two silver challenge cups for members, to be won three times in all before becoming member's own property, but not necessarily in succession. All points to count up to date, December 26th, in each year as one win. There was also a Members' Monthly Show, when competition was very keen. Champion Nor.: 1, 2, Pepper; 3, Harland. Yorks.: 1, Brumby and Stone; 2, Stevenson; 3, vhc, hc, Stamford. Nor. Novice: 1, Longhorn; 2, vhc, c, Russell; 3, Calvard; hc, Stamford. Yorks.: 1, 2, Kliney; 3, vhc, Potter; hc, Deighton; c, Prentice. Hybrid Pairs: 1, 2, 3, Brumby and Stone; vhc, Prentice; hc, Oliver. Gold. or Bullfinch: 1, Stamford; 2, Pepper; 3, hc, c, Potter; vhc, McKay. A.O.V. Brit.: 1, Pepper; 2, Potter. Mr. Medley judged, and gave every satisfaction, although he had a heavy task. This was one of the best monthly members' shows the City of Hull Cage Bird Society has ever had, and we think we are at last on the road to make progress.

ALTRINCHAM AND DIS. O.S.

Third Annual Members' and Residents' Show of cage birds, White Star Restaurant, February 23rd. There was a record entry, and the quality and quantity of the exhibits exceeded by far the expectations of the committee. Many visitors attended during the Show. Among the chief attractions were the Foreign birds exhibited by Mr. S. Beaty (Bowdon). Their bright and beautiful colours caused great admiration, since they were staged in the pink of condition. The judge was Mr. S. Hadwin (Liverpool), and his great adjudications met with general approval. Great credit is due to the secretary and committee for the able and efficient way the Show was managed, prize money and cards being paid out the same night. RESIDENTS' CLASSES: A.V. CAN. YELL.: 1, Mrs. Hay; 2, 4, Plant; 3, Schofield. BUFF: 1, White; 2, Kennerley; 3, Tomlins; 4, Schofield; vhc, Plant; hc, Norton; c, Potts. LINNET: 1, Whitney; 2, Hamlett; 3, Jenkinson; 4, Potts. BULLFINCH: 1, Hamlett. A.O.V. BRIT. HARD.: 1, Potts; 2, vhc, Whitney; 3, Sutton; 4, Jackson. GOLDFINC: 1, 2, Ardern; 3, Whitney; 4, Davies. A.V. BRIT. SOFT.: Jenkinson. MEMBERS' CLASSES: NOR. CLUB REPORTS.

HUDDERSFIELD O.S.

Fortnigbtly meeting held at Headquarters, the White Hart Hotel, on February 25th, when a paper on pairing birds for breeding, by J. C. Barnes, Esq., of Sheffield, was read, in his absence through illness, by the secretary. A good number of both members and friends assembled, and were amply rewarded by the excellence of the paper, which was of a very instructive and interesting character. A long discussion ensued, which was freely taken up by both the old fanciers and the novices present. A vote of thanks to Mr. Barnes for his paper, and of sympathy with him in his illness, brought a very pleasant evening to a close.—S. LODGE, Hon. Sec.

SANDY LANE C.B.A.

The Sandy Lane and Dis. C.B.A. had a very interesting evening on Tuesday, February 26th, at which there was a good turn up of members to witness a bird washing exhibition by Mr. Holmes Hodgson, one of our oldest members. The novices were greatly impressed with his style of handling the birds. After the washing there was a very lively disеussion, and some good information was gained. There was also a judging competition amongst the novices, which was very keenly watched, seven members placing the birds in one position, 1, 2, 3, 4.—BENJ. BUCKLE, Sec.

PORTOBELLO C.B.S.

Meeting held February 27th, President, Mr. W. R. Dunn, in the chair. A very interesting paper on the "Scotch Fancy Canary" was read by Mr. John Bell. Tracing the origin of this bird, as at present shown, to a cross between the old Glasgow Don and the high-shouldered Belgian, he gave a fine description of the class of bird required for show purposes, with many useful hints as to matching the birds for breeding, both for show and first crosses. He did not believe in in-breeding Scotch Fancies, but believed in double buffing. He gave some good hints in regard to feeding stock when getting ready for breeding, and also when moulting. He answered a number of questions which were put by the members. On the motion of the Chairman, the meeting terminated with a hearty vote of thanks to Mr. Bell for his very able paper.—W. LECKIE and J. LEACH, Hon. Secs.

SCOTTISH PLAINHEAD CLUB.

Annual general meeting, in Neilson's Hotel, Glasgow, on February 16th. Mr. W. Watson (Kilmarnock) presided, in the unavoidable absence of Mr. A. G. Cameron, the President. Report for the past year was read, showing a balance of £6 19s. 1d., with three medals in hand. Seven medals were competed for, together with a very handsome £5 5s. challenge cup, presented by Mr. J. Sandiford. This cup was given for most points gained by a member of the club during the year. Mr. W. Watson (Kilmarnock) came in an easy winner with 105 points, Mr. A. G. Cameron being runner-up with 83 points. The following members won medals during the year:—A. McFarlane (Glasgow), W. Watson (Kilmarnock), A. Young (Glasgow), J. Winter (Edinburgh), J. Howie (Dundee), A. G. Cameron (Kelso), J. Holmes (Edinburgh). The rules of the club were revised and brought up to date, and will soon be in the hands of the members. A new club cage was approved of; particulars will be sent to all who were members last season, along with voting papers. I shall be pleased to give any information to anyone wishing to be a member. All Norwich fanciers are invited to join and give a helping hand to extend the influence of the club. Fee 2/6.—D. SMITH, Secretary, 142, High-st., Edinburgh. (Above report only reached us this week.—EDITOR.)

WALLSEND AND MID-TYNE C.B.S.

Annual meeting, February 28th. Mr. J. M. Macdonald presiding. The balance sheet showed a balance of £1 9s. 7½d. Mr. John Heddon presented a cup for competition in members' classes, which, along with the cup the members are purchasing themselves, will make two that our society are blessed with. That ardent fancier, Mr. W. Taylor, of Newcastle, signified his intention of heading our new cup fund with £1. Our membership was increased by seventeen, which shows a bright lookout for this season. We fixed the date of our next Show, November 8th and 9th. An attractive agenda for the year was discussed. We are to have a Nest Feather Show or two, also lectures, as far as possible, each month. Mr. Welch, of Hexham, has promised to read a paper on his experiences with British Softbills in March, and in April Mr. T. C. Crawhall, of Newcastle, has promised a lecture on the Yorkshire Canary. A trip into the country was also suggested for Whit week. Officers for 1907:—President, the Mayor of Wallsend (Councillor Matthew Murray); Vice-Presidents were re-elected, with Rev. W. Rickaby, of Derwent Valley; Chairman, J. M. Macdonald; Vice-Chairman, W. Ronald; Sec., J. R. Evans; Treas., J. Hyslop; Auditors, Messrs. Johnson and Harper. Committee, Messrs. Taylor, Thompson, Hembrough, Reeves, McGinn, Heddon, Johnson, Stubbs, Haikney, Langlands, Hopkinson, Preston, Cockburn, and Dixon. Anyone desirous of joining our Society will receive a hearty welcome at our monthly meetings.—JOHN R. EVANS, Sec.

NORTHERN YORKSHIRE C.C.

Annual meeting, held in Newcastle, February 27th, Mr. J. R. Slack in the chair. The following new members were admitted:—Mrs. Pearse, Newburn; Messrs. Buckingham, Newcastle; Hutler, Jarrow; H. J. L. Williams, West Hartlepool; W. Thompson, South Shields; D. E. Kent, Newcastle; W. J. Taylor, Newcastle, making 29 members now on the books, which is considered to be very good for a new society. The following are the officers elected for the season:—President, G. W. Cuthbertson, Esq.; Vice-Presidents, Dr. O'Neal, Sunderland; Messrs. W. J. Taylor, Newcastle; Pearse, Newburn; Gregory, Newcastle; Buckingham, Newcastle; and Capt. Briggs, Newcastle. The committee are as follows:—Chairman, Mr. J. Slack; Vice-Chairman, Mr. J. Robson; and Messrs. W. Cockburn, W. J. Taylor, J. Davison, G. S. Ellwood, D. E. Kent, J. Shepherd, J. Grieve, J. H. Leach, J. M. Walker, W. Reay, J. H. Harrison, and T. Steele. Hon. Sec. and Treas., T. C. Crawhall. The question of joining the Cage Bird Union was brought forward, and it was decided to leave it until a later date. It was decided to confine the club's operation to the four northern counties of England, namely, Northumberland, Durham, Cumberland, and Westmoreland. It was proposed to raise a fund to purchase a cup to be won by the best young bird bred by a member, to be won two years in succession or three times in all. Proposed that we write Y.C.C. for their permission to adopt their standard and scale of points. Proposed by Mr. Robson that we hold a Members' first feather show at a convenient date during the summer. Those wishing to become members please apply to T. C. Crawhall, Hon. Sec., 121, St. George's Terrace, Newcastle-on-Tyne.

CITY OF GLASGOW O.S.

Annual "Smoker" in the Bank Restaurant Friday evening last. Mr. Young occupied the chair, and was supported by the following gentlemen, well known in the Scotch Fancy world:—Messrs. Muir, Jardine, Black, Todd, Gray, McIlwhain, and others. There was a large turnout of fanciers, and there being some excellent vocal talent present, a most enjoyable evening was spent.

LUTON C.B.S.

Washing Exhibition at headquarters, 4, Peel Street, Monday last. Mr. G. Bennett washed six birds, and Mr. E. Cherry one, showing how birds are washed and prepared for exhibition. It proved to be an instructive and enjoyable evening, everyone present (about 30) being delighted. During the evening the Chairman, on behalf of the Society, presented to the Secretary, Mr. E. Cherry, a handsome marble clock, in recognition of his services. The Secretary suitably replied.—E. CHERRY, Sec.

MORPETH AND DIS. O.S.

Second meeting held February 23rd. The following officers were elected:—President, Mr. Thos. Floyd; Vice-Presidents, Messrs. T. Dixon and A. Grey; Chairman, E. Cowling; Treasurer, R. Richardson; Secretary, A. Dippies; Assistant-Secretary, W. Scott; Trustees, E. Cowling and T. Dixon; Auditors, A. G. Marshall and H. Seely; Committee, J. Myers, A. Grey, S. Pegg, G. Seely, J. Smith, and J. Younger. It was decided to hold our next show November 16th. Four new members were made. Agreed that the subscription be 5s. per year, instead of 6s., and to hold lectures, etc., during the present season.—A. DIPPIE, Sec.

WELSH NATIONAL C.B.S.

Meeting held February 23rd. The Secretary announced that the Right Hon. Lord Glantawe, Sir. J. T. D. Llewellyn, Bart., Mr. Picton Turbervill, Miss Dillwyn (daughter of a former M.P. for Swansea), and other prominent county notables had kindly given their patronage and financial support. Sixteen new members were enrolled, and the Treasurer reported that a financial success is assured, there being a substantial banking account standing to our credit. We note in your last issue a rival Society dissociates itself from us, and the Committee desire all fanciers to note this is correct, as we have no connection with any local society.—S. J. NICHOLAS.

CITY AND SUBURBAN A.C.B.

A well-attended meeting, February 25th, was presided over by Mr. A. C. Burn. Messrs. J. Herring, G. Menhenett, A. C. Rouse, E. Watling, and W. Francis unanimously elected members. Interesting letters were read from Rev. Rosslyn Bruce, C. T. Maxwell, and the Secretary N.B.B. and M.C., the latter announcing that the annual summer outing will take place on May 25th, and that it would give their members great pleasure for us to join them. The Secretary presented an amended schedule of the forthcoming Finch Show.

Mr. G. Gardner was then called upon for his lecture on "Items in the Cage Bird Fanciers' Curriculum," which was listened to with profound interest, his keynote being (1) suitable cages, (2) the exercise of great patience in the time to start breeding, (3) scrupulous cleanliness of cages, and (4) the advisability of in-breeding to become successful. The latter subject the lecturer was most strong to insist upon, proving and giving instances from his own personal experience.

Upon questions being asked, Mr. F. J. Martin rose to say he could not associate himself with this subject of in-breeding, on the grounds of sentiment. On the question of cleanliness, he might say he gave his birds a bath once a week with permanganate of potash, four grains to each (a receipt he had taken from a Fancy paper a few years ago, the author of that receipt being no less than Mr. Gardner himself), with most beneficial results. The Chairman, after giving an instance of the mistake of a friend fancier in purchasing second-hand cages, with the inevitable result of the introduction of red-mite, explained his mode of preparing for nesting operations, and the weekly wash of vessels. Mr. A. W. Curtis recounted his experience of the result of the progeny of 14 yellows from a double-yellowed hen, proving that colour did not altogether proceed from the cock alone.

Referring to Mr. Martin's remark anent permanganate of potash, it reminded him (Mr. Gardner) that it also had its abuses by lending artificial colours to certain animals on the show bench, and, especially after being set with lemon juice, was difficult of detection.

In a few well-chosen words, the Chairman thanked Mr. Gardner for his interesting and instructive lecture.—VICTOR WYNN, Hon. Sec.

SOUTHERN NORWICH P.C.

Presentation to Mr. G. B. Leclair.

Second annual general meeting of the above club was held at the Crystal Palace on February 18th, Mr. H. Lambert Brown in the chair. The following members and visitors were present:—Messrs. E. Baker, W. R. Miles, R. J. Pretty, J. H. Bellamy, B. J. Cooper, A. W. Curtis, J. Hodder, W. R. Berkshire, H. Frost, A. W. Warr, A. E. Godden, W. Morris, R. P. Harper, J. W. Rennie, F. S. Matthes, G. B. Leclair, G. Woolhouse, F. White (Melbourne, Australia), and P. Waring, N.P.C. The result of the voting for officials was as follows:—President, G. Crabb, 39; Hon. Treasurer, F. S. Matthes, 33; Hon. Secretary, F. S. Matthes, 38; Hon. Assistant-Secretary, G. B. Leclair, 33; Auditors, T. Heath (21) and H. Simpson (18); London Committee, W. Morris (27), H. Lambert Brown (22), J. Hodder (21), Curtis (20), G. Gardner (18), and J. Rennie (11); Provincial Committee, Collings (Devonport) 27, Lowe (Cowes) 16, Gibbs (Canterbury) 16, Saunders (Sutton) 13, Dring (Enfield) 12, A. E. Godden (Hastings) 10. The Treasurer then read his report, remarking that there was a balance in hand of £6, but if the members would only pay their subscriptions the club would be in a much stronger position, and he hoped that they would do so. Regarding the shows in the Champion Section, the members had supported the shows well, but he was sorry to say that in the Novice Section it was poorly supported, and hoped that next season they would support the shows better. Mr. Morris proposed eight classes instead of six as at present, to include a class for Heavily-variegated or Green, which he felt certain would fill well, knowing that such a lot of these birds are kept at home. Several members took part in the discussion. Mr. Leclair said that he was sure a class for Greens and Heavily-variegated would fill well, and be appreciated by the members, but he thought seven classes in each Section quite enough. Mr. Woolhouse proposed as an amendment, seconded by Mr. Pretty, to have seven classes in Champion Section, and six classes in Novice Section, Mr. Woolhouse stating that he thought six classes were ample for the novices. He thought it was too much to ask the different shows to give, but was sure it would pay for shows to give seven classes in the Champion Section, and six for novices, and one class in each Section for Heavily-variegated and Greens. The different societies then would be glad of our support. Mr. Morris's proposition, and Mr. Woolhouse's amendment, were put to the vote, and Mr. Woolhouse's amendment was carried. Mr. Lambert Brown proposed a vote of thanks to the retiring officers, coupling the names of Messrs. Miles, Baker, Bellamy, A. E. Godden, and P. Cooper, also to the Scrutineers, Messrs. B. Cooper, Bellamy, Hodder, Day, and Harper. Messrs. Miles, Baker, Bellamy, Godden, and B. Cooper each responded, saying that they were only too pleased to do what they could to further the interests of the club. The Chairman then said he had a most pleasant duty to perform. The members had subscribed together, and he had much pleasure in presenting the retiring Secretary, Mr. Leclair, a purse of gold as a slight recognition of his past services for the club. He said that since the club's formation Mr. Leclair had worked hard in its interests, which, he was sure, all the members appreciated. Mr. Leclair thanked the Chairman and members for their kind gift, and stated that he was very sorry indeed to give up his duties as Secretary, but as his time was so limited, he thought that it would be better for the club's interests that he resigned. He would still keep the interest of the club at heart, and he was sure that in Mr. Matthes, the new Secretary, the members would have the right man for the position. The meeting closed with a hearty vote of thanks to Mr. Lambert Brown for his services in the chair.

THE CAGE BIRD UNION.

Kindly announce that a license has been granted to the Llandudno Easter Show, to be held on April 4th. Members of the Union wishing to exhibit should send for schedules to Mr. W. Yates Gregory, Queen's-road, Llandudno.

The Luton and District Society, Weston-super-Mare C.B.A., and the Eccles C.B.S. have also joined the Union, the latter Society on the understanding that Rule 17 stands as last year.

The following Show dates have been sent me:—Hull, November 22nd—23rd; Northampton Good Intent, November 20th—21st; Weston-super-Mare, October 31st; North and South Shields, October 25th—26th. Will Societies in the same districts kindly note dates advertised and avoid clashing.

All affiliated Societies should send on their Show dates as soon as fixed, so that I may book same, and avoid clashing when granting licenses or enrolling new Societies.

I shall also be glad to hear of any changes of delegates that may have been made. I am shortly sending out voting papers for the election of the new Executive Council, and they will be sent to last year's delegates, unless I am otherwise informed.—GEO. W. F. LYTHGOE, Sec.

"LIVERPOOL" VIRUS
is absolutely harmless to human beings and animals, but is speedily fatal to
RATS & MICE.
It causes a fatal disease to spread through a colony of these pests.
They do not die in their holes.
There is, therefore, no danger of smell from dead bodies.
Mice Virus, 1/6 per tube.
Rat Virus, 2/6 and 8/- per tube.
Prepared in Liverpool. Of all Chemists.
EVANS, SONS, LESCHER & WEBB, Ltd., Liverpool and London.

LONDON AND COUNTIES A.C.B.

A very successful smoker was held by the above, at the "Bay Malton," Great Portland Street, W., on the 7th inst., when a large audience assembled to enjoy a good programme provided by Messrs. A. Williams and R. J. Pretty, the treasurer and secretary respectively of the Association. The President, Mr. F. W. Thorpe, took the chair, and was supported by Messrs. E. Pretty, A. Sparkes, J. Oldaker, P. Adamthwaite, Morrison, Shakespeare, Olford, G. Elgar, Bryant Mr. and Mrs. Key, Mr. and Mrs. Tringham, Mr. and Mrs. Kelly, Mr. and Mrs. Hawes, W. Orme and Misses Orme, and many other ladies and gentlemen friends.

The accompanist, Mr. Cecil Ensor, opened the proceedings with a solo, "The Gladiators," Mr. Adamthwaite following with a song, "Anchored," and Mr. Hawes with "The River of Years," both of which were well received. Mr. Williams also pleased the company with "You should see them go." Mr. Alfred Honeyman's rendering of "The Boy who Carries the Gun," and a recitation by Miss Dyer, "People will Talk," were greatly appreciated. A very old favourite, Mr. George Hopkins, appeared next with "A Song Without a Name," and in response to an encore amused the audience with "Leave her alone with them," which referred to the ladies, squalling babies, and safety pins—"if left alone with them they would play for weeks"; but the ladies turn to laugh came in the last verse, when the singer turned upon the men—"Give them some birds and a cage and they would play for years." The honours of the evening went to Master "A. S." (nine years of age), who charmed the company with a violin solo—Ruff's "Cavatina"—which was rendered in a masterful manner, the audience "asking for more," and were treated to "La Priere Dune Vurge." This "youthful Paganini" is shortly leaving for Germany, to receive the final touches to what promises to be a great career. Mr. Cecil Ensor convulsed the company with a very humourous ditty, and Mr. Tom Hook by "The Galloping Major"; the catchy chorus of "Bumpity, bumpity, bump" was taken up with great gusto, and his encore—"Billy Muggins"—brought peals of laughter. After a short interval, Mr. Adamthwaite again obliged, also Mr. A. Honeyman, with "The Jolly Sailor," which were well received, as also was Mr. Stricklen's rendering of "Big Ben" and "The Outlaw," with meritorious applause. Mr. Ted Honeyman reported in his humorous manner what happened "At a minute to 7 last night," and almost prostrated the audience with "The blow almost killed Father" and "What the Captain said." Mr. F. Stewart, with "A Serial Story," and Mr. Harry Lee's "I can't come out to-day" were much appreciated, and, after hearing Messrs. Cecil Ensor, H. Hawes, and A. Williams, and not forgetting a brilliant pianoforte solo—"Denora"—by Mrs. Hawes, a most enjoyable evening was brought to a close.

CINNAMON MARKED YORKS. C.C.

A most successful smoking concert was held at the Market Tavern, Bradford, on March 2nd. Mr. Sunderland, who presided, was supported by Messrs. J. W. Wharton (President of the Club), Mr. J. Greaves (Vice-President), Mr. W. Richmond (Ex-President), and a company numbering over 100. Following his opening remarks, the Chairman called on Mr. Bradley, who rendered "Carissima" in very good style. Mr. A. Morton gave "Asleep in the Deep"; Mr. J. Chapman (Liversedge), "The Irish Emigrant"; Master Bradley, a boy about ten years of age, with a splendid voice and style, sang "Kathleen Mavourneen." This item was really grand, and was much appreciated by those present. Comic songs by Messrs. Longley and Brown brought us to the principal business of the evening—the presentation of prizes. Mr Sunderland said how great was the pleasure it gave him to present the prizes. He was heartily in sympathy with the Cinnamon Marked Club, and though not an exhibitor himself, he was the next best thing to it—he had the honour to be the husband of an exhibitor; and from what he knew about the Fancy, it was about the best hobby for a working man, particularly as he had not to leave his home to be able to keep in the forefront of the exhibition world. In calling upon Messrs. R. Sutcliffe and Son to receive the first prize of the open competition, he pointed out that this was the ninth time Messrs. Sutcliffe had been first, which proved them to be real champions in Cinnamon marks. He had great pleasure in handing to them the valuable silver tea urn, and hoped they would live long to enjoy the use of it. Mr. Sutcliffe, sen., replied, and said it gave him much pleasure to be again first; but should he be first next year, he would do, as he did in 1905, let the runner-up have the first prize, and he would have the second. Mr. H. Sutcliffe was also called upon to say a few words. Mr. Sunderland then called upon Mr. J. Wilcock to receive the cup presented by Mr. J. Sandiford for second prize. He was sure they would all appreciate that in Joe they had a real good trier for the second man, and when he looked on Mr. Sutcliffe or Mr. Wilcock and noticed the weight they had behind them, he thought they were a good first and second. Mr. Wilcock said he was no talker; but he thanked them very much. Mr. H. Dobson took the third prize, a solid gold enamelled medal, with Cinnamon marked buff bird in centre. He thanked the club for his prize, and wished it every success. Mr. J. Hartley, in taking the fourth, a heavy silver medal, with same centre as gold medal, said he had been rather unfortunate in not being able to get his birds out at the early shows; but he was very pleased to receive the fourth prize, and thanked them all for their reception. Mr. Bradley then sang "An Evening Song"; Mr. Morton, "Go to Sea"; and Mr. Johnston "The Bandolero," each being well received. Mr. Sunderland then presented the novice prizes. The first went to Messrs. Odgen Bros., a beautiful rose bowl, presented by Mr. J. E. Brotherton (President Y.C.C.). Mr. T. Odgen said it gave him great pleasure to receive the handsome present. He thanked the donor for his liberality in providing such a prize, and hoped that others who were able would follow his example in giving prizes to properly conducted clubs, as he thought clubs were a great encouragement to young fanciers. Messrs. Halmshaw Bros. (Liversedge) then received the second prize, a very nice electro-plated cup, presented by Mr. A. Ambler. In replying, Mr. A. Halmshaw thanked the club, and hoped they would be as successful in the open competition. Mr. Sunderland then asked Mr. E. B. Denton to receive a beautiful silver medal, presented by Mr. R. Sutcliffe; but seemed to think that Mr. Denton was in his wrong class, as he did not look like a novice. Mr. Denton replied that he was pleased to be among the prizes, and pointed out that no single exhibitor had beaten him in the competition. The fourth prize, presented by the President, Mr. J. W. Wharton, was won by Mr. S. Lingley (Bradford), who pointed out that through ill-health he had not been able to exhibit much this year. Master Bradley then gave "Daddy," which was encored. Votes of thanks were passed to the donors of the prizes and the Chairman

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

A. AMBLER, 17, Lytton Road, Bradford. Judge of Canaries and Cage Birds. Life experience. 11 years reporter to the Fancy Press.
H. W. AXE, 55, Market Place, Doncaster. Judge of Canaries and other Cage Birds. Practical experience (Norwich and British speciality).
W. O BARLOW, The Aviaries, Malpas, Cheshire. Judge of Canaries, British Birds and Mules. Terms moderate
J. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of Canaries and Cage Birds. Long practical experience. Terms moderate.
W. P. BARNES, Judge of Canaries and Cage Birds. Life practical experience. Breeder and exhibitor. Reporter for Fancy Press. Commercial Road, Grantham.

Norwich Plainhead Club.

The election of officers for 1907 has resulted as follows:—President, Mr. Eckersley; Vice-Presidents, Messrs. Boxson, Payne, Davis and Aitchison; Committee, Messrs. Cook, Trengove, Booth, Hayhurst, Vardy, Clegg, Towers, Dent, Heaton, Roe, Spillman, and Stringer; Judges, Messrs. Vardy, Trengove, Roe, Bexson, Payne, Battye, Wellings, Heaton, Davis and Barnes; Auditors, Messrs. Clegg and Lythgoe; Secretary, J. Raynes, 9, Richmond Road, Chorlton-cum-Hardy.

Please notify change of address from 54, Curzon Street, to 208, Dorset Street, Leicester, writes Mr. C. Draper, Sec. Leicester Hand-in-Hand C.B.S.

Our Young Bird Show takes place on July 13th, and our Annual Show on December 26th, writes Mr. W. Barritt, Hon. Sec. Suffolk C.B.S.

The balance-sheet of the recent City and Suburban A.C.B. Pair Show shows a profit of £1 19s. on the venture, the goodly sum of £3 11s. 8d. being taken at the "gate."

The Scottish Norwich Plainhead Club appears to be in a flourishing condition, the balance-sheet for 1906, to hand, showing a favourable cash balance of £6 19s. 1d., as against £4 0s. 10d. in 1905.

Mr. J. Brooker (Dorchester) writes:—I have had so many offers for my Norwich Canaries through advertisement in CAGE BIRDS that I find it impossible to answer them all. I thank everyone for their offers.

CAGE BIRDS ANNUAL for 1907 to hand. It is without doubt the best 6d. worth out, brimful of information. I consider the portion devoted to "Diseases of Cage Birds" worth the money, having regard to its handy form of reference.—F. W. PICKARD (Wakefield).

From its handbook, just issued, the North London C.B.A. seems in a flourishing condition. Its membership is increasing, it has a good list of patrons, and its programme for the year includes lectures, a country ramble, shows, etc. The Secretary is Mr. R. P. Harper, 26, Brighton Road, Stoke Newington, N.

By the reports of the Derby fanciers, they are putting things ship-shape for the coming "struggle." They cannot meet with worse luck than last season. Some hens are very forward. Mr. Jas. Hill (president of the Derby C.B.C.) has two nests up on the outside of his out-door aviary; of course, in the inside of same he has a little heat on.—W. H. BAMSEY (Hon. Sec. Derby C.B.C.).

We are informed that Mr. A. E. Bailey (of Bristol), who anticipates going abroad early next month, has disposed of his champion Bramblefinch, "Pride of the West," the Palace Show winner, to that well-known local fancier Mr. W. H. Manley (Hon. Treas. of the Bristol C.B.S.). We are sure fanciers will wish Mr. Bailey every success in his new venture, and we shall hope to hear from him in the near future as to the cage birds of Canada and the Far West.

Messrs. Carter and Co., of 38, Howard Street, Birmingham, favour us with an excellent sample of Canary marking rings, which they are putting before fanciers through our advertisement columns. They are made in first-class style, of aluminium, are neat, clean and feather-weight, and admirably adapted for their purpose. Numbers and year are very plainly shown. They are made either closed or removable, the latter possessing a little device which makes their fixing or removal a very easy matter indeed.

At the next meeting of the L. and P.O.S., on the 21st inst., at the "Raglan," Aldersgate Street, E.C., "Questions and Answers on Yorkshires" will be read and discussed. Such authorities on the variety as Messrs. Battye, Bailey, Wilcock, Radley, Mallinson, Halliday, Holroyd, Broadley Drake, and Cowgill have given the benefit of their experiences, and they are very appropriate to the present season of the year. To give an instance, question 12 refers to the cause and cure of inflammation in young birds.

Perhaps!

The Cuckoo, it is reported in the "Standard," was heard and seen in the neighbourhood of Gamlingay on Saturday, March 2nd.

The L. and L.F.A. Dinner.

Tickets for the L. and L.F.A. social evening, on Saturday, April 6th, at the Spinners Hotel, Shaw Road, Oldham, are now ready (first-class dinner and presentation of cups and medals), price 2s. each. They should be applied for as early as possible (to avoid disappointment). The talent for the evening is unique.—H. OLIVER, Sec., 35, Hadfield Street, Glossop.

The N.B.B. and M.C. Dinner.

We have been compelled to alter the date of the dinner of the National British Bird and Mule Club, which is to be held on Friday, March 22nd (instead of Thursday, 21st, as stated last week), at the Holborn Restaurant. Bird-lovers desirous of being present would oblige by communicating with me at once.—T. R. TROWER (442, Caledonian Road, N.).

Our Recent Prize Competitions.

We had hoped to be in a position to announce this week the winners' names in the prize competitions held in connection with our Birthday and Crystal Palace special issues. But the enormous entry, and the consequent onerous nature of the task of selection, combined with an unusually heavy inrush of "copy" during the week, compel us to ask the kind indulgence of readers for seven days. The winners' names shall all be given in our issue of next week, together, we hope, with other interesting particulars.

The CAGE BIRDS postcards I bought are gems.—F. KING (Cambridge).

Mr. W. T. Turner, 109, Victoria Road, Parkgate, Rotherham, is the newly-elected Secretary of the Parkgate and Rawmarsh C.B.S.

Mr. J. C. Barnes (Walkley, Sheffield) is down to judge at Bramley (near Leeds) Show, November 2nd, and Preston, November 8th.

I have had over 50 replies to my advertisement in CAGE BIRDS, and find it impossible to attend to all.—GEO. HILL (Hon. Sec. Greenwich and Deptford C.B.S.).

We are asked to draw attention to the fact that in his advertisement on March 2nd, under British Hardbills, Mr. Dymond's (of 71, Clive Road, Cardiff) name was incorrectly given as Young.

I have just received CAGE BIRDS ANNUAL from my newsagent, and am highly delighted with it. The alteration you have made in the shape of it is a direct advance on previous years.—H. HILL (Sec. Bradford East O.S.).

The date of the Rochdale Good Intent C.B.S. First Feather Show has been changed from June 29th to June 22nd. Mr. R. Barrass (Rochdale) has been appointed judge of the Back End Show.—S. M. CLAYTON, Hon. Sec.

We have received the 1907 year-book of the South Metropolitan F. A., which gives an interesting programme of events forthcoming during the present season, including lectures, washing and judging competitions, and discussions.

Mr. J. W. Marsden, 44, Troop Street, Blackburn, writes that he has been appointed Hon. Sec. of the Blackburn and District C.B.S., in succession to Mr. J. Walsh. The Society are having a Members' First Feather Show on July 6th.

After a most successful year's working the West London F.A. have a balance in hand of 19s. A good programme of lectures, shows, and concerts has been arranged for 1907, and things generally are very promising. It has been decided not to hold an open show this year.

It is impossible for me to reply individually to the dozens of applicants for my Hybrid pairs and breeding cages, advertised in CAGE BIRDS. I may say that I am still making breeders, etc., for fanciers from my advertisement of three weeks ago. Wishing you success.—H. C. AINGE (Melton).

Glad to hear of the new C.B.S. for Rutherglen and District, writes Mr. C. B. Whitelaw (Glasgow). I wish them every success, and trust that before long they will have a strong, enthusiastic membership, and that their name will be figuring often in your valuable paper. They have a splendid staff of office bearers, who will give new members every encouragement.

Manchester Fanciers Note.

Next Monday, March 18th, Mr. J. W. Cutmore, Curator of the Liverpool Museum, lectures on "British Birds, their Habits, Structure and Coloration," at the Deansgate Hotel, before the Manchester and N.C.O.S. Those fanciers who read in CAGE BIRDS the paper Mr. Cutmore gave some years ago in Liverpool, will remember what a treat it was, writes Mr. G. W. F. Lythgoe, the Hon. Sec., and we hope to have a good muster of fanciers and friends—in fact, anyone interested in hearing him first-hand. The lecture will be illustrated by specimens of various birds.

What Approval Means.

A well-known dealer in birds draws our attention to the fact that some buyers seem to take the word "approval" to mean that birds will be sent on receipt of their order, without either cash or deposit. He forwards a letter in substantiation, wherein the writer says hard things because he (the dealer) refused to send birds on such terms. We may point out that the latter means nothing more nor less than giving credit to all and sundry—a system no business man would dream of adopting. But "approval" of purchases can always be had, where so stated, by depositing the purchase amount with CAGE BIRDS.

Proposed Scottish Amalgamation.

The matter of the proposed amalgamation between the Edinburgh Ornithological and Scottish National Societies caused, we hear, a heated discussion at the meeting of the S.N.S. on March 9th. A letter was read from Mr. Melrose (Sec. Edinboro' O.A.), in which he stated that his Society had delayed acting in certain matters, hearing that the Scottish National had a proposal on foot re amalgamation. Some objection was made to consideration of the letter, on the ground that the subject had not been before the S.N.S. This was over-ruled, as notice of motion had been given by a member, who proposed and advocated at some length such amalgamation. He must, however, have been sadly disillusioned when, one after another, members popped up all over the well-filled room to speak in opposition. Finally the proposal, which found only two supporters, was overwhelmingly defeated. As is usual in such cases, there were not wanting those who sat on the fence and declined to vote.

A CASE IN POINT!!!

Show Secretaries and Committees Note!

"Please withhold our Show Date until further notice," writes Mr. J. M. Nicholson, Hon. Sec., Seaham Harbour and District C.B.A. "I find we are clashing with Gateshead, which is very undesirable, seeing we are so close together. We had thought all Shows round our way were already fixed up."

The above letter should bring home to every Show Official the desirability of at once placing his own particular fixture in our

SHOW DATES FIXED COLUMN.

It is practically the only safeguard against clashing, that frequent cause of numbers of disastrous shows. For a list of the many other weighty benefits which also accrue

Peruse the announcement made on this page on March 2nd.

Dec. 14.—**Harrogate C.B.S.** (H.W.B.)

Beats Cock-Fighting Hollow.

I was present, writes a Birmingham correspondent who must remain nameless, at a cock main the other day (I don't know whether you like anything of that sort). After we had won, just by the skin of our teeth, a friend gave me two Roller cocks, and this has started me off Canary breeding instead of cock fighting. I have several of your plates framed, and I think they are very nice.

Gateshead Show is fixed for Dec. 13th and 14th next.

Mr. I. Jones (Walsall) writes:—I have had excellent results from my adverts. in your paper, CAGE BIRDS.

Great Yarmouth Poultry and Cage-Bird Show is fixed for November 6th and 7th.—F. C. DAVIES, Hon. Sec.

A Robin's nest containing three eggs has been found in a disused stable lantern at the Hall Farm, Little Baddow, Essex.

Owing to so many replies to my advertisement in CAGE BIRDS, writes Mr. R. H. Folley (Exeter), I find it absolutely impossible to answer all of them.

Mr. A. Lister (Gateshead) writes:—My address is now 8, St. George's Terrace, Rectory Road, Gateshead. All communications should be sent to that address.

Writing from Glasgow, Mr. C. B. Whitelaw says:—Many thanks for sending my copies of CAGE BIRDS ANNUAL. It is a very handy book for reference, and should be in every bird room.

I have been a constant reader of your valuable paper for two years past, writes Mr. G. Hutton (Stirling), and there is nothing I enjoy better. Friday never comes too soon. Through one small advertisement in it I sold all I had to sell.

I have been a constant reader of CAGE BIRDS for the past five years, since I took up the Yorkshire Fancy, and I must certainly say it has helped me a long way to my success both in breeding and on the show bench.—S. K. HOSFORD (Cork).

THE
BIRD WORLD
MAGAZINE
For MARCH
IS
Now on Sale everywhere

It is the most fascinating number yet issued, and should be read by every bird lover.

Exquisite frontispiece in color of Green Canaries, and many other beautiful illustrations. In point of interest, its contents have never been surpassed.

ORDER AT ONCE.

Single Copies, 3d., from your Bookseller.
Post free, 4d. from
F. CARL,
154, FLEET STREET, LONDON.

The annual meeting of the Consett, Blackhill and District P.P.R. and C.B. Society was held recently. Mr. W. Nattrass (chairman) presided over a large meeting. An increase of over 30 members was reported. Mr. F. Turnbull, one of the auditors, presented the balance-sheet, showing a substantial balance of £30 18s. 8½d. This was largely due to the hard work of the committee.

At a special meeting of the Seaham Harbour and Dis. C.B.B.A., Feb. 23rd., it was decided to hold a two-days' open show during the year; also a members' show Nov. 16th, Station Hotel; also a first feather show, date to be fixed later. It was proposed and carried (unanimously) that we advertise and guarantee open show in your valuable paper, CAGE BIRDS. Three new members elected.—J. M. NICHOLSON, sec.

Mr. Norman's Drawings.

I should like to add one more appreciation of your valuable paper, and say how much I appreciate Mr. Norman's drawings. They are the most life-like that I have ever seen; in fact, you almost expect to see them burst into song as you look at them, or to take wing and fly away.—THOS. C. CRAWHALL (Newcastle).

Mealworms: Their Use and Abuse.

In "Bird Notes" for February, Dr. W. G. Creswell says, concerning the mealworm:—"There is absolutely nothing in a mealworm to harm a bird, not even the chitinous outer covering. The prejudice that exists against them in many quarters is perfectly senseless, and is due only to the imagination of those who know nothing either of the analysis of a mealworm or the physiology of digestion, whether in birds or other animals. There is but one objection to the use of what I have seen described as the "useful but imperfect (!) mealworm"—that is, the price they command. Any other objection is only worthy of the author of the astounding dictum that since spiders live on insects, a few of these given to a bird represent much insect food."

Your report says Llandwrog Show, which should read Glynllivon Fanciers' Show, held in Schoolroom, Llandwrog. I am pleased to say that, as you report, it was a huge success, and other shows please note, we paid all prize money the same night.—WM. WINNARD.

Mr. T. H. Melhuish, 68, King's Road, Cardiff, writes:—My county contracts being finished, I shall now have more time to give to Fancy matters, and have decided to accept a few judging engagements, should they be offered. I have already had three enquiries from societies.

The annual show of the York C.B.S. will be held on November 5th and 6th, in the Exhibition Buildings, one of the finest rooms in the North for such a purpose. This we have taken at great expense, and hope to give bird lovers a real treat and surprise on the occasion of the show. Messrs. J. H. Roe and H. W. Battye will judge.—A. RICHARDSON, Chairman.

Mr. H. W. Battye writes:—I am pleased to say that my son, after eight anxious weeks in the Nurses' Home, is now at home and on the high road to complete recovery, and to my many fancier friends who, by their kindly enquiries and expressions of sympathy, have done something to lighten the trouble, will you kindly through the medium of CAGE BIRDS convey my sincere thanks?

Mr. C. Hobarts, Secretary Norwich Record B.B.S., writes:—"Our officers for ensuing year are: Chairman, H. Smith; vice-Chairman, J. Parsons; Treasurer, W. Daynes, 15 Denmark Road; Committee, F. Cullington, W. Johnson, and A. Payne. Our meetings and two shows are to held at the Spread Eagle, Sussex Street. Meetings will be held on alternate Mondays.

From the Metropolitan Association of Canary, Mule, and Hybrid Breeders we have received a dainty little blue-covered booklet of rules. We note the club is affiliated to the C.B.U., and that the hon. sec. is Mr. A. J. Head, 52, Broughton Street, Queen's Road, Lavender Hill. The chairman is Mr. F. J. Martin, and the committee comprises Messrs. Peck, Saitch, McGregor, Arnold, Wythe, Allison, Hartley, Gray and Sawyer; treasurer, G. Kearney; assistant sec., J. Best.

The Labourer and His Hire.

Judges' fees in Scotland seem to be considerably lower than those that prevail this side of the border line. One balance-sheet to hand discloses the fact that a judge's fee for a large show was 10s., while in another case the almost (to our eyes) ridiculous sum of 5s. was handed over in payment for a hard day's judging. The work, it seems to us, might be termed honorary upon this basis.

Information on Distempers.

Referring to a correspondent's question re "Durisco," Mr. T. Soar writes:—This is a distemper, and can be obtained in all shades from almost any colour stores. It is a good article, but expensive, and is used chiefly in the best kinds of work. If your correspondent wants a distemper for cages, he will be able to obtain one which will serve his purpose at about half the cost of "Duriseo."

Then—And Now!

On many occasions when a special number of CAGE BIRDS has come out, I have purchased extra copies to give to friends of mine who have newly commenced to keep our pets. Result, they have also taken it in. You might wonder why have I done this? Well, I remember the poor support and little matter that used to be given us before "C.-B." came on the scene. Double number after double, but how little on cage birds! Then you produced our one and only paper, to which we owe so much; consequently, my support.—J. G. HUTCHINSON (Newcastle).

Advantages of Stud Registers.

Mr. Spillman, in forwarding his stud register, printed upon another page, says:—"I think it absolutely necessary to make some reference to the great advantage gained by adopting a stud register. It is just fifteen years since I made the Norwich Plainhead my speciality. To start with I secured some stock birds from a few of the best strains in the Fancy, and it was not long before I found out that one or the other suited a certain purpose, such as the progeny coming from one strain were a bit overdone in feather, whilst another were particularly good in that respect but ran a bit on the small side whilst others were very good in colour, and, making a note of these things, I soon concentrated the good points, and discarded the bad ones. In the course of four or five years, I had fixed a strain that could almost be said to be depended upon." We understand that Mr. Spillman has never bought a winner unless it was his own blood, and that, to use his own words, "Nearly all the winners in the locality have his blood running in their veins." This should go a long way to prove to the most fastidious that pedigree breeding is the royal road to success. "Convinced I am," continues Mr. Spillman, "more than ever that two birds coming from the one strain properly matched are more likely to 'hit' than even two winners that are bought up haphazard at a show."

For the small sum of Sixpence 6D.

You can obtain on order from your newsagent the one and indispensable book of reference for cage bird keepers,

"CAGE BIRDS" ANNUAL
for 1907.
PART I.

This Complete Guide to the fascinating and profitable hobby of bird-keeping now appears before the public for the fifth year. Anything and everything that the bird fancier requires to know will be found in its pages. Just read this list of contents:—

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

Norwich Plainheads.—**J. H. Payne.** Yorkshires.—**H. W. Battye.** Crests & Crestbreds—**W. E. Greeves.** Cinnamons & Miscellaneous Canary Queries—**J. North.** Border Fancies—**J. Lester.** British Birds, Mules & Hybrids—**G. E. Weston.** Foreign Birds—**Wesley T. Page,** F.Z.S., M.B.N.H.S., &c. Park and Lake Aviculture—**Frank Finn,** B.A., F.Z.S., M.B O.U. &c. Wild Bird Life—**H. Norman.**

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Continually Moulting (Garab).—The continual moulting has evidently weakened your Norwich bird considerably, and you must strengthen him up before there will be a chance of getting him right again. Give him in his drinking water for three weeks 10 drops of tinture of quinine. Twice or three times a week let him have a little egg food, to which add 5 drops of Parrish's chemical food. Let him have occasionally a piece of sponge cake, over which drop a little best sherry. Keep him covered over at night with a warm cloth, and out of all draught.

Pairing Norwich Too Early (D. and 4th).—You made a mistake in pairing up your birds so early. The fact of the hen pulling the cock about, as you say she did, only shows that she was not in breeding condition. Put them together again the second week in next month, when I have no doubt they will act quite differently. I should not advise you to part with the hen if she is a suitable mate for the cock. Your feeding is quite correct, but you might give them a pinch of maw seed three times a week.

Cock Five Years Old (A.C.).—If your Norwich cock is as you say in good condition and in full song, then you may reasonably expect to breed with him, notwithstanding the fact that he is five years old. But do not pair him up until the middle of next month, and in the meantime feed him well. Let him have twice a week a little egg food and a pinch of maw seed, and, as soon as you can get them, a few young dandelion leaves.

YORKSHIRES.

Answered by H. W. BATTYE.

Cataract (Wigan).—I know of no cure for cataract on the eye, only an operation, and birds are certainly very small and delicate patients to operate upon. Sorry, but I think the best thing would be to put the bird out of its misery.

Food Moisture and Colour Query (A.C.E.).—I don't think you would be very successful in rearing young Yorkshires on the mixture you name. I should not like to try myself. You will find nothing better than the old-fashioned hard-boiled egg and bread crumbs, or crushed biscuits with crushed hemp seed and green food. Perhaps a wash would improve the appearance of your birds. To improve their colour you will have to wait till next moult.

Cock with Sore Eye (F. Gelder).—Get a little milk, make it about blood, warm with hot boiled water, and bathe the bird's eyes with it, using a perfectly clean bit of soft sponge or linen rag. Throw this away every time, and use fresh. Bathe twice or three times a day, and when bathing examine the eyes for any bit of sand you may possibly find, as that has probably caused irritation, and the bird has made this worse with rubbing it on the perches. Keep the latter clean, and put a thick, soft cloth in cage bottom till the bird is better.

Yorkshire Hen Picking Feathers (J. Gardner).—Your hen has been having too much stimulating food, and probably too little exercise. Hens should not have egg food, or, at any rate, very seldom, till they are put into the same cage as the cock. Of course, I am speaking of those that are in robust health. Stop the egg food, and give a sprig of well-washed watercress daily. The Epsom salts is the proper treatment in this case, and you may have found a great improvement by the time you see this. If not, continue it, making fairly strong. I fancy she is ready for breeding, and you might do worse, under the circumstances, than pair her up at once.

Pairing Query (T.L.S.).—Have carefully studied the various birds you describe in pairs, as well as I could from the particulars you give in your letter. My best advice is:—Pair No. 1 cock to No. 8 hen; No. 2 cock to No. 7 hen; run No. 3 clear yellow cock with both No. 6 and No. 9 hens. No. 4 cock I should not use for breeding purposes, as from your description he is both thick and short, as well as being bad in wing carriage—all three bad failings in a Yorkshire. Nos. 5 and 10 hens I should also discard, both being loose in feather.

Pairing—Seven Pairs (No Name).—From your very meagre description and the limited ways possible of pairing the birds you mention, I can only give you a very little reliable information. Could I have seen the birds myself it might have simplified matters. Your two pairs of Yorkshires you can only pair as you have numbered them, viz., No. 1 cock to No. 1 hen, and No. 4 cock to No. 4 hen, and though they are not ideal pairs they may breed some reasonably good stuff. The Norwich I would pair as follows:—No. 2 cock to No. 3 hen; No. 3 cock to No. 6 hen; No. 5 cock to No. 2 hen; No. 6 cock to No. 7 hen; No. 7 cock to No. 5 hen.

Songless and Moulting (Island Green).—Your feeding and general management seems all right, but I am afraid your bird is paying the penalty so many singing Canaries have to pay that are kept in kitchens—that is, it has got into the loose moult. Give him a little egg food daily for a fortnight, and well mix with it six drops of Parrish's chemical food; sprinkle over it a pinch of maw seed. Stop the apple for a time, and, instead, give a wee bit of well-washed watercress three times a week.

Inbreeding (H.K.G.B.C.).—Your query is well and briefly put, and am glad to be able to answer in your favour. You say you have three yellow cocks bred from a certain hen, and three buff hens bred from another hen, but all the six young birds are from one cock. Well, if these birds are as you say, they are good ones, and, in addition, are sound and healthy, you need not be afraid to pair them up for breeding, especially if the two parent hens were unrelated. But be careful another year, and don't overdo the thing, because, although a little of a thing is good, it does not necessarily follow that the more of it you get the better. I am not an advocate of inbreeding too closely among Canaries.

Sawdust for Cage Bottoms (B. Soames).—I am sorry I was unable to reply to your query last week as your birds seem to be in a bad way generally, and probably some of them may have died before you see this. I am decidedly of opinion that the sawdust has been the cause of your trouble. I don't advise its use in any case. And, to be candid, in many cases where sawdust is used, it is to save either the appearance of dirt or the trouble of cleaning, and it covers up and helps to breed as much filth as anything in the bird room. I would any time rather see an honest heap of droppings accumulated than know that a sprinkling of clean sawdust was covering up a similar or worse accumulation. But, apart from this, you have been very imprudent to have given them their sand and gravel among the sawdust, and sometimes crushed oats amongst it. Clear out all sawdust, and substitute some good maker's grit. And give the birds you have left the following mixture in both egg food and drinking water for three days, and, after that, one day in the egg food, and next day in the water for another week or ten days. Recipe:—Equal parts tincture of rhubarb, essence of cayenne, essence of peppermint, spirit of camphor, laudanum; dose, six drops. It may be given either in egg food or drinking water, or both.

Flight Cages (J.A.L.).—The system I follow with my young birds when they leave the nest is to put them along with the hen into a small flight cage of the following size: 30 in. long, 16½ in. high, and 8½ in. from back to front. This is a very convenient size for a nest of from three to five young ones. I have also some larger flights, and when the youngsters are able to feed themselves, two or three nests, according to numbers, go together into one of these until they are eating colour food. Then, if there seem a few that promise to turn out a bit above common, I put them into ordinary stock cages and moult separately, or in couples if they agree. My large flights are 4 ft. long, 20 in. high, and 11 in. from back to front.

Difficulty in Getting Out Notes (Jikes).—It is not wise to purchase close on the breeding season birds that have a difficulty in getting out some of their notes. I should advise you in future to avoid doing so. Give your bird six drops of glycerine, and six drop of good whisky in its drinking water fresh daily for a week, or ten days, when he should have got over the difficulty, and be in full loud song. When this is the case you can consider him in breeding condition, and when the hen is skipping briskly from perch to perch, flapping her wings, and, maybe, carrying a feather or some other bit of loose material in her mouth, she may also be considered in breeding condition, and you may put them together as soon as you like.

CRESTS AND CRESTBREDS.

Answered by W. E. GREEVES.

Crestbred Cock with Lump at Root of Tail (G. D.).—Do not attempt again to remove lump by cutting. Being so near the oil-gland I should advise you to try and disperse it, by bathing it frequently with hot water; be careful that the water is not too hot at first. It may be some little time before there will be any noticeable improvement, but if you are persistent you will find this the safest and most effectual treatment. You can, if you like, paint it with iodine; but I doubt if it will be as successful as the bathing. If you do paint it, be most careful not to put any iodine near, or on, the oil-gland.

Crestbred Hen Blind One Eye (A. Brown).—You do not say the nature of the blindness your bird is troubled with. I conclude from your treatment that it is swollen and closed; if so, bathe it well with new milk slightly diluted with warm water. There is a disease of the eye which is highly contagious; for this reason, if around the eye is swollen and inflamed, keep it away from all others. If you will fully describe its nature I shall be able to advise you further. If cataract is the cause, then nothing can be done, and, in all probability, the other eye will go likewise; but I have known this to be delayed by continuously giving a tonic, Parrish's chemical food for preference, either in egg food, its water, or direct into its beak.

Blind Canary (M. B. Partridge).—You may mate your third bird with a hen, but the chances are very much against your getting fertile eggs. My own experience has proved to me conclusively that blindness is hereditary; for this reason, I consider it most undesirable to attempt to breed from a bird that is blind. The hen, if she is a good feeder, would bring up the young ones without the assistance of the cock bird.

Crestbred Hen Out of Condition (Lover of Crests).—The symptoms of your hen point to liver trouble. Feed, as a staple food, on good, sound clean Canary seed and German summer rape, giving at the same time a liberal supply of grit, a few leaves of dandelion, or watercress daily; a small piece of boiled carrot may also be given occasionally, but no food of a highly stimulating nature. Give a bath frequently, and on bright warm days lay the bird on its back in your hand and well soak the body with tepid water. Mind and do this early mornings, so that the feathers get a chance of drying before night.

Crested Cock Losing Crest (Ajax).—It is difficult to say, without seeing your bird, for what reason he has gone bald. If caused by insects, dust well with Keating's powder. If the skin is in its natural colour, do not attempt to do anything. As the bird to all appearance is in good health the loss of head feathers will not interfere with his breeding. Feed on canary seed daily, German rape every other day, hemp seed once a week, and egg food, if you intend breeding from him, twice a week; also give a sprig of watercress twice a week; shake or damp as much water from it as you can before giving. Give a bath daily; if he won't bathe, dip in a basin of tepid water; do this in the morning. To a Crested cock mate a Crestbred Plainhead hen—i.e., a Plainhead bred from one Crest parent. If in a warm room, the last week in this month or the beginning of April. It sometimes happens that a bird will not moult at its proper time; when this is the case a moult is forced, by taking it from a high temperature to a low one, or vice versa; or a friend might say to you that he would take your bird and moult it for you, meaning nothing more than that he would attend to it in a proper manner during the time of moulting. Queries relating to different varieties must be written on a separate sheet of paper.

CINNAMONS.

Answered by J. NORTH.

Pairing (Barrow).—By pairing a yellow Cinnamon cock with a mealy Green Norwich hen you stand a good chance of getting Cinnamon-coloured daughters from them for sure, and if the green colour of the hen is derived from Cinnamon crossing, you might also get some Cinnamon sons from them. If the hen is not Cinnamon-bred her sons will be green or green-marked. Yes, the progeny would be useful for crossing back with either Norwich or Cinnamons assuming they were of good size, thick-set in body, and free from surplusage of feather.

Did Journey Do It? (F. Harrison).—Yes, I quite think the journey on the bicycle may have given your Canary "a chill," for, supposing there were any ventilating holes in the wrapper, it seems quite feasible that the inrush of cold air would be too strong for the bird's lungs. Its liver may also have got into a congested condition at the same time, which would account for the abnormal appearance of the excreta. The bird should be kept in a box cage, and out of all draughts in a warm room. Let it have some bread and milk sop sprinkled with seed, and into two tablespoonfuls of its drinking water mix half a teaspoonful of syrup of buckthorn. At first a little sweet apple may be given, and subsequently some green leaves of watercress, groundsel, or chickweed.

BORDERS.

Answered by J. PATTERSON.

Various (Novice).—(a) Your hen has evidently caught her foot in some loose wire and sprained it. Put as much permanganate of potash as will lightly colour the water about the shade of port wine. Catch her, and put her foot in this for a minute or two. This will soon put it right. If very much swollen, a little lanoline rubbed on gently will soothe it. For perches use ¾ wood with the rough edges taken off with a plane. Place your hand saw in a vice with the teeth uppermost; pull the spar from end to end until it is well grooved. This will enable her to get a better hold of it. Yes, she will be quite safe to breed with, about the the end of this month. (b) I am afraid I can assist you very little to prove that the birds you bought have won at the shows you mention. Perhaps you could reach the birds' previous owner and ascertain from him, either by going over CAGE BIRDS of 1905 and seeing who won, or applying to the secretaries of the shows mentioned, asking who won those particular classes, enclosing stamp for reply.

Various (W. S. Brewster).—You are treating your birds right by keeping them in separate cages, before the time you will require her, as your feeding is not over stimulating. There is little else you could do to keep her back, unless changing her cage into another room where she won't hear the cock bird calling to her; or shift her about from one corner to another. When a large number of hens are kept it is an easy matter keeping them back by running them into strange cages. This puts pairing out of their heads for a day or two, but as you only mention one, perhaps that is all you have. (2) After you remove, and the birds have to be kept in the kitchen, keep them as far back from the fire as possible, and below the gas. I have no doubt they will get on all right during the breeding season, but I am afraid it will be more difficult to moult them out successfully, and keep in perfect health and cleanliness after. In most kitchens the temperature varies too much every day, whereas in a cold room, even an attic, it is more equal. Have a look round after you are settled, and see if you could not find a place of this sort.

ROLLERS.

Answered by F. A. LESTER.

Roller Not Singing (J.M.C.).—Sorry to hear your bird has not improved, and would recommend the mixture advised in our last issue for German cock Canary. If the bird is otherwise healthy, I see no reason why you should not breed with him. There are so many things to be considered that if the bird is not an expensive one I would advise you to buy another.

Hen that Pants (Snip).—There are several things that may cause your Roller hen to pant. Here are a few. She may be too fat; she may be an old bird; she may have asthma, caused by the very thing you are trying to help her with, to wit, the fire during the day. You see, during the winter months, the coldest part of the 24 hours is between 2 a.m. and 5 a.m., and your room may be about 60 deg. to 63 deg. during the day, and drop to 40 deg. or even lower during the night, and those extremes nearly always affect the lungs. If you think it is asthma, give her the mixture advised for German cock Canary in the last issue, and give a piece of raw Spanish onion between the wires. Your other feeding is correct. The egg food did not come to hand, so I cannot comment on it, but egg food made of four or five Osborne biscuits to one egg, thoroughly mixed and given in quantities of half a teaspoonful to each bird will not do any harm.

Time of Feeding when Breeding, etc (Cock Main).—What time to feed during breeding would depend upon when you got up in the morning. If you are an early riser, feed as soon as daylight appears; but if you rise about seven or eight o'clock you will have to leave the egg drawer full of egg food last thing at night if the birds are very young; if they are over a fortnight it would not matter so much. With regard to your other question we cannot recommend any other way than to procure your birds through one of the advertisers in our Roller columns. I cannot take any interest in cock fighting; but the old saying that it's "an ill wind that blows nobody any good" applies here, as it has been the means of you taking up a Fancy from which you will get more enjoyment, if not so much excitement, as you have done from cock fighting.

MISCELLANEOUS CANARY QUERIES.

Answered by J. NORTH.

Wholesale Loss of Birds.—My Canaries and Finches duly moulted, but in December some started to lose all the feathers near beak, and in a few days their heads and necks were bare; they were continually pecking their breasts and wings, and died in a few days. I suspected red-mite, but dressed cages effectually. Gave soft food, salad, and apple. In January hens laid 30 eggs, but none were fertile. Temperature of room 60 deg. F., size is 16 ft. by 14 ft. When I keep any in separate cages they do not die.—H. S. ROSS (St. Louis, Mo.).

If I were nearer to you I might fathom this mystery, but the thousands of miles which divide us prevent you submitting any bodies for post-mortem examination. The temperature of 60 deg. in January is too high, unless it is the summer with you, but as your birds do not seem to be breeding I take it to be your winter time. I do not think the loss of feather causes the deaths; anyway, there is no such disease in this country that I know of. In "Canary Plague" and "Bird Fever," birds die suddenly, seeming to be in full vigour one day and dead the next, although, no doubt, they may have been affected for days or weeks. If the disease which your birds have got is merely a parasitic skin complaint it might be arrested by dusting on precipitated sulphur, or the same remedy might be made into a lotion with milk and glycerine. Remove all the birds from the room, and thoroughly disinfect it with burning sulphur. Also let the walls, ceiling, and floor be well washed with boric acid solution. No dependence can be placed on lime-wash nor in carbolic acid. I cannot understand how you came to the decision that none of the 30 eggs were fertile. As the birds in cages seem to be free from the disease, run them all into clean cages while the room is being disinfected. Let them have plenty of fresh air and daylight; use as little artificial heat as possible, and feed on seed and such salad as groundsel, watercress, or chickweed.

Soft Moult.—Would the smoke from the stove at night cause the moult, or would a higher temperature caused by sunshine through the day, falling back to about 45 deg. at night, cause it? Will they be any good to bred this season?—BALGONIE.

Smoke from any stove during the night is very likely to so upset them that nothing but a moult would save them. Old lime could not possibly be the means of causing a bird to moult. Fluctuations of temperature are very likely to cause a soft moult, but not unless the birds are under glass, or in a greenhouse, where the difference between the midday and midnight readings are great. There is no reason why birds that have been dropping feathers out of season should not come into breeding condition this summer. Feed them well on soft food and salad, in addition to usual seed.

Paired Too Soon.—Roller cock and Crested hen paired, have built their nest for some days past, but yet there is no sign of any egg. Have I paired them too soon?—H.A.H.

Yes, I take it that is just the source of the difficulty. You have paired the birds too soon, and if you will take my advice you will separate them for another fortnight. They would then, in all probability, make up what they please to consider their minds to start again in earnest, the genial warmth of spring helping them. Do not give any soft food while separated, but a little salad or sweet apple may be given with advantage.

Panting and Wheezing.—My birds seem to pant very much, and wag their tails a lot; one will be singing one minute, the next he will squeak aloud and wheeze. Fed on canary seed, with sop every morning.—A CONSTANT READER.

Your birds appear to be in low condition of health, and one imagines, in the absence of precise information on the point, that they are in a very cold or draughty position. You would do well to get them near a window having a southern aspect, so that they might have the benefit of warm sunshine. Let them also have some egg food every day, in which you have let fall three drops of Parrish's chemical food for each bird. Sweet apple or boiled carrot are also much relished by birds, and tend to bring them into prime order.

Cock Hatched in July.—Cock Canary hatched in July; is he old enough to breed from? What age hen should he have?—BEGINNER.

Canaries that are bred during any given year are fit to commence rearing a family any time in the following summer. Some breeders are very partial to mating a young cock to an older hen or an elderly cock to a yearling hen. Breeding cages are of various patterns, but those with a sliding partition are the best for keeping control over the movements of the engaged young couple, which are apt to be at times somewhat erratic. At this time of year one bird should be kept in each compartment, and towards the end of the month the slide may be withdrawn.

Canary Seems Languid.—Canary, supposed to be a cock, has been with me two weeks, but does not sing. It travelled on a bitter cold day, and lay at the station all night. It seems languid. When given a bath just sits until its feathers dry, and does not preen itself. Usual seed feeding, with egg food twice a week.—PANS.

If your Canary is a hen, and so very far from being in a healthy condition, it cannot be of much use; most people would not take any trouble with it. However, the spring is coming, and birds are getting into high condition, and it is the best time of the year for improving the health of invalids. It has very likely got a severe chill; you would do well to treat it in the way often advised in these columns. It should not be forced into the bath; but if its cage and bath is placed in the sunshine it would probably go in willingly, and then preen itself in the natural warmth of the sun.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

Cock Bullfinch to Hen Canary (A. J. F.).—It is a dubious point whether a cock Bullfinch can be mated to a hen Canary with hope of success. The chance of getting Hybrids is but a slight one, anyway. Several breeders have claimed to be successful, but several of the said claims have proved, on investigation (as I personally know), to have not the slightest foundation on fact. You can try your luck, of course; I certainly don't

THE CANARY BREEDING SEASON

Will soon be with us and all who contemplate cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries :—

HOUSE'S CANARY MANUAL

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL." The following Summary of Chapters, etc., will show you how completely the ground is covered:

Aviaries and Cages.
Show Cages.
Perches.
Breeding Canaries.
The Young Birds.
Food for Nestlings.
Hens Refusing to Feed.
Sweating Hens.
Young Birds Dead in Shell.
Red Mite.
Clear Eggs.
Moulting.
Exhibiting.
Diseases (treated very fully).
Every variety of Canary is treated upon at length and illustrated.

Mr. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

FIFTY COPIES of the Third Edition slightly soiled—9d. each to clear.

know of, and can't imagine, any real reason why a cock Bullie should not fertilise eggs in captivity. Still, everybody seems to find them very shy at doing so.

Steadying Down a Greenfinch (F. L. Hill).—A run into a show cage occasionally would undoubtedly tend towards steadying your Greenfinch. In fact, a frequent change of cage (from small to large one, etc.) is often a valuable help in getting a bird tame. Another good method lies in running them out into a "hop-cage" (the very small wired-all-over cage, often used for Linnets and Goldfinches), and giving them a spray before returning them to their stock cages. Just wet, not drench, them. The best all-round stock cage for any Finch is the one I am always recommending—viz., made on the lines of the illustration given in CAGE BIRDS ANNUAL for 1906. A variegated Norwich hen would make him a good mate. It would be useless pairing them up before the middle of May, I fancy. Hang their cage in a very quiet spot, and don't go poking about round it more than is absolutely necessary.

Old or Young Jackdaw (E. Weight).—If your Jackdaw has a grey neck it is in adult plumage. Still, it may be a last year's youngster, for they assume the grey neck plumage at the moult. There is not usually much difficulty in taming a Jackdaw, either young or old; though, of course, reared birds are ridiculously tame (if one may be allowed the phrase) right through the piece. You could cut through four or five of the primary feathers of the wing, about two-thirds the way up. One wing only would do, doubtless, but birds so treated have a curiously lop-sided look—and lop-sided ways, too.

Another Partly White Linnet (Recruit).—I answered a query very much like yours last week. Note reply to "Puzzled Browney." Partly white Linnets are not at all rare, and have no very great value, unless almost absolutely white—pure white, pink-eyed specimens are really rare, and fairly valuable. I could not pretend to value yours without seeing it. Much depends on its sex. Exhibit it in the classes for feathered (or albino) birds. If entered in the ordinary Linnet class it will probably get "wrong classed" by the judge—rightly so, too, in my humble opinion. See other replies for hints on steadying. Hang birds about breast high. Some birds get tame (domesticated) in next to no time; others don't get a bit steady until after a moult—some not even then. They are not by any means alike in disposition.

Breeding in an Aviary (A Youth).—Your aviary, 6ft. long by 2ft. from back to front by 6ft. high, is much too narrow, in my opinion. A width of 4ft. and onwards would be far better, and certainly more conducive to breeding results. You could try four hen Canaries with a cock Goldfinch, Linnet, Siskin (or Redpoll), and Greenfinch (or Twite) with some certainty of getting Mules for your trouble. If you want Hybrids, I could not recommend more than two Bullie hens with a cock Goldie and Linnet.

Mules and Rollers (W. J.).—Your Rollers would most certainly pick up the notes of the Linnet if you kept him in the same room. Likewise, your young Mules would pick up the Roller song if kept within earshot of it. To learn the Linnet song (pure) they must hear only the song of a good singing Linnet. I advise you to carry on your Mule breeding operations in a room quite apart from the one containing your Roller Canaries—that is, if you are breeding the latter with a view to producing exhibition songsters. A Linnet can, of course, be mated to Roller hens.

Ivy in an Aviary (W. L. Tilley).—This is another query I answered in last week's issue. See reply to "Chick." I cannot add anything thereto; nor, I think, is it needed.

The Uncertainty of Hybrid Breeding (Buggins).—Quite a flavour about your nom-de-plume. The position you set forth is quite a common one with triers after Hybrids. Many a poor fellow is deluded into believing success within his grasp (1) because the cock bird feeds the hen, (2) because he pays her (and frequently) even more intimate attention, (3) because she duly builds, lays, and sits. I have even known the poor deluded one post a paen of exultation for publication in CAGE BIRDS. Whenever I have perused such I have always experienced a strange desire to "wink the other eye"; and no doubt other hardened sinners—that is to say, fanciers—have at the same moment experienced the same curious disturbance of the optic nerves. If only the aforementioned signs really foretold fertile eggs, what numbers of Hybrids we should all of us breed! But, alas! they don't. And the beginner soon finds out this bitter truth, generally much to his exasperation. Try the cock Goldie and hen Bullie again this season, by all means. Good fortune may quite likely visit you. But don't be over sanguine about the earlier eggs; it is usually in the very late clutches that the fertile ones put in an appearance. June and July—and even August—are the great months.

Feeding Linnet and Skylark (New Reader).—The treatment of Skylarks was very fully gone into in our last issue, to which I must please ask you to refer. The Linnet has also had several answers devoted to it this last few weeks. The treatment to make it sing (assuming it, of course, to be a cock bird) lies in the correct feeding. Go to a good seed shop and get the following mixture, by measure: Canary and teazle, two pints each; summer rape, charlock and linseed, half-pint each. Give this as a stock food, and vary it with a good pinch of maw or hemp now and again, given in a finger-drawer or separate dish; also a little packet Finch mixture, and wild seed mixture, and a few cracked or shelled sunflower seeds. Give plenty of seeding shepherd's purse, chickweed, and groundsel tops, but strip off old, stringy leaves (these do internal damage, there can be no question) giving the young and juicy ones only. While moulting, it is not a bad plan to increase the richness of the stock mixture by including a portion of hemp and maw therein—say, one part of the former, and a half-part of the latter. Of the wild seeds, shepherd's purse, our old friend, is the most generally liked by Linnets and many other birds. Then we have plantain, wild mustard, chickweed, groundsel tops, bard-heads, the various thistles, dock, various grass seeds, and gold of pleasure. Here you have a fairly complete list of easily obtainable and easily recognisable wild seeds, and not for Linnets alone, but for all British seed-eaters. "Wild seed mixture," for a feed now and again, you can get sent to your door—and very cheaply, too—by many advertisers who use the columns of CAGE BIRDS.

Blackbird Bald (A. M. S.).—Your feeding is not particularly good. I am often advising how it should be done. Mix the food on the lines advised "J. S." last week, and supply live food regularly—especially mealworms. Give the bird two gentle doses of sulphate of soda, with a two-day interval between them; dissolve as much as just covers a sixpence in every two tablespoonfuls of drinking water. Mix into its soft food daily as much flowers of sulphur as will just cover a shilling. If the bird will let you catch it without any fierce struggling (and you are not unused to handling birds), a light dressing of the bald places with hazeline ointment, once daily for three of four days, would be calculated to do good. But I don't advise unskilled people to try handling such birds as Blackies.

Canary-Bullfinch Hybrids (Novice, H. S.).—It is early yet for fertile eggs from couples such as Canary-Bullies. The signs are distinctly promising, of course. But don't build your hopes too high on them; read reply to "Buggins" this week. If any of the eggs chance to prove fertile transfer them at once, by all means, to the reliable feeding hen Canary you have (the hen which will eat any kind of insect). She will rear the young without any trouble on the usual foods supplied to hens having young Canaries under them—i.e., egg food, crushed hemp, soaked summer rape, young leaves of chickweed, shepherd's purse, lettuce, etc.; giving in addition, of course, any insect food you can command. One word of caution: Don't get messing and fussing about the cage to an utterly unnecessary extent, or you may quite likely put her off her duties. Should she unfortunately neglect them, remember that the hand-rearing of Bullfinch Hybrids offers but little difficulty, even when it has to be undertaken at quite a tender age; the chief things to observe are frequency and regularity of feeding, and giving but a little at a time—not overstuffing them.

Bullfinch Bald (H.W.).—Give for one day, in two tablespoonsful of drinking water as much sulphate of soda as will lie on a sixpence. Afterwards add 5 to 12 drops of the juice of a fresh lemon to the same quantity of water, daily, for a fortnight or more. A gentle, light dressing of the bare spot with hazeline ointment daily for 4 or 5 days would help the recovery of plumage. Keep it out of the eyes. The bird should have a liberal daily allowance of green food—young dandelion, chickweed, lettuce, groundsel flowers, shepherd's purse, rape seedlings, etc. Leave off the linseed, hemp, and niger, except for a pinch once a week. Offer a dozen sunflower seeds daily instead. The quantity of lemon juice should be increased gradually.

In a Room (Grateful).—Your room, 15 ft. by 7 ft., would accommodate fifteen to twenty hen Canaries comfortably—about half that number of male birds would be all that is necessary. The beginning of April will be plenty early enough to turn the birds therein. You certainly could turn the cocks in straight away; but the exercise will do the hens the most good, I fancy. I don't think one cock Bullfinch would make himself objectionable in any way—judging by his behaviour as a rule that is, for I have never tried one under circumstances like the present. Seeing so many other birds enjoying the society of the fairer sex may turn his thoughts into similar channels—with a prospect of profit to yourself. Whatever sunflower seed the Canaries eat will do them no harm.

Indoor Aviary (Novice B.).—Wire netting is the more economical, but a properly made and strengthened wire front looks much neater for indoor aviaries. Still, half-inch (or five-eights) wire netting, if well stretched and fixed, looks quite all right. Your "aviary," 66 in. by 14 in., is really only like a large flight cage, and suitable for no more than three or four birds for breeding purposes. If you want Mules, try a Goldfinch and a Linnet with three hen Canaries. If either of the Britishers squabble, remove him, and leave the other alone with the hens. Only one Hybrid couple could be kept therein—though you might try a cock Goldfinch with two hen Bullies. Put in straight wood perches. Feed birds as recommended in other replies this and last week. Food and water may be either out or in, so long as the birds find their way to them. Hen Canaries like nest pans or nest boxes to build in. Hen Bullfinches are more uncertain; they will use old Thrushes' nests, wood nest boxes, a sod of turf with a depression heaten into it, a Roller travelling cage with the inside fittings knocked out, the head of a broom with a hollow made in it, and many other things. One needs to know and humour them as far as possible. Try a wood nest box in a shady corner, and let the nesting material supplied her contain some cocoa-nut fibre, say pulled out of an old door mat; it is excellent.

Skylark Sneezing (A. G.).—As you shifted your bird from a cold room to a hot one, you will have to take the consequences, I am afraid. Mix a tablespoonful of best honey with a tablespoonful of best glycerine, and well stir one teaspoonful into every two tablespoonfuls of drinking water. Give this a fortnight's trial, fresh daily. It should relieve the "sneezing" and hoarse song. Write again if no improvement is perceptible.

Jay Going Wrong (Constant Reader).—"Middlings" makes no sort of food for a Jay; I wonder your bird has stood such a diet as long as this. I told how the Jay should be fed only a fortnight ago. Why not have profited by the advice? It is no use writing to me to "cure" him; the "cure" lies in your own hands. The best and cheapest way to feed is to utilise table scraps largely. As a stock food, you could use broken-up dog biscuits or puppy cakes (or game meal), with coarse crissel—say two parts of either of the former to one part of the latter (by measure). Moisten with hot water, giving it crumbly moist, and mixing with it table scraps, cooked meat and potatoes, greens, gravy, etc. Give a few trapped mice, young Sparrows, and the like (even young frogs, if you can capture them), but not over much raw meat. You will find them very accommodating in the matter of food. Eggs (raw and cooked), acorns, beechmast, nuts (cracked) of various kinds, peas, berries, fruit, worms, beetles, grubs, and butter are other things they will eat. For one day dissolve as much sulphate of soda as will lie on a shilling in two tablespoonsful of drinking water. Follow this with a fortnight's course of Parrish's chemical food, a small teaspoonful to the same quantity of water.

Newly-caught Chaffinch (R. C. L.).—The present is quite the wrong time of the year to catch a Chaffinch. They are fast coming into breeding condition, and once any wild birds get thoughts of a wife and a home into their heads, it is no use trying to remove them from the green fields in the hope that they will take to a caged existence. It is probably cruel into the bargain, for many of them will not even live, and but very few steady down. As your bird keeps so wild, I advise you to open the cage door and let it away. Buy another next autumn; or get a steadier bird, one which was caught some time back.

Bullfinches Not Succeeding (B. Breeding).—It is not at all unusual (quite the reverse, in fact) for two Bullfinches to make no attempt at domestic duties when confined in an aviary, even when the latter is large, like yours. As they have had two unproductive years now, I don't see the force of letting them try again—that is, if you want to breed anything. You might take out the cock Bullfinch and substitute a vigorous cock Goldfinch. But possibly the hen Bullie would not accept his attentions, but attack him. In that case I should clear both the old Bullies out, and try cock Goldfinch to Bullfinch hen, both fresh birds. You don't say how big your place is; but it is possible, in a really big aviary, to turn out six or seven Bullie hens, and a variety of cock birds—say, Goldfinch, Linnet, Greenfinch, Redpoll, and Siskin. But keep an eye on the Grecuie; some turn out very quarrelsome.

Several Ailments (Constant Reader).—For the Bullfinch that is "bald" adopt the treatment outlined in another reply this week; and the same for the Chaffinch which wheezes, giving honey and glycerine. Keep the latter in an equable temperature, out of draughts. For the Bullie hen, weak after her illness, I recommend a course of Allan and Hanbury's Byno-phosphates; a teaspoonful in every two tablespoonfuls of drinking water, fresh daily, for a fortnight or three weeks.

Breeding in Indoor Aviary (W. H. P.).—An indoor aviary, 6ft. by 3ft. wide, is only suitable for some eight or nine birds where breeding results are desired. I advise you to take out the cock Bramble and hen Chaffinch (pair them separately in a cage, if you like), also the two Bullfinches (or one of them, at least), and one of the Redpolls. With the remaining Goldfinch, Linnet, and Redpoll turn in five or six Canary hens. This will be your best and simplest plan.

Piping and "Made in Germany" (Mr. Finch).—No, sir; I don't consider all the Bullfinches I hear piping a tune (that is, a human-made melody, so to speak) as certain Germans. There are other signs which afford one some indication as to whether a bird is of British or Continental extraction. I will go so far as to wager my top hat, however, that 99 out of every 100 of the "broken pipers" we see in England, come originally from over the sea. I wish you good luck in your attempt to teach a British nestling to pipe a tune; grind "Ehren on the Rhine" into it, then you can have some fun with the poor British bird judges next autumn.

Steadying Siberian Goldfinch (Finch).—See another reply on steadying Finches given an enquirer in this week's issue. Some birds are very intractable compared with others, and try one's patience sadly. I have known a number of examples of different species (Linnets, Chaffinches, Hawfinches, Bramblefinches, Goldfinches, Greenfinches, etc.), which it was quite impossible to get steady and tractable. The only thing that could be done was to open the cage door and let them fly; or to sell them for aviary birds.

Mule Breeding (J.T.).—Yellow hens are always better than buffs (other things being fairly equal) for Mule breeding. Don't put your Goldfinch with the hen Canary now rearing young Canaries until the latter are on the verge of being able to "pick" for themselves. When they are about a month old it should be quite safe to introduce Mr. Goldie, the youngsters, of course, being either in a nursery cage, or separated by a wired partition. Your Goldfinch, however, not being a house-moulted bird (only recently caught, I presume) is quite likely not to be in breeding form before early in May. Your letter is hard to understand on this point, however. My own Finches have been on full song for a long time now. I am not on the staff of Canary specialists; but may perhaps be pardoned for telling you that if you pair a Green cock to a buff hen (clear, I presume), you will breed a preponderance of heavily marked youngsters. Don't mix your queries next time you write, and make them perfectly clear.

Linnet for Muling (Hackenschmidt).—It makes no matter that the Linnet was caught only last October, and is not house-moulted. If it is in full song, has a blue-black beak, and is very steady (as you say), I should not hesitate to pair it up to a hen Canary in a week or so's time. If the advice proves "rotten," Mr. Hackenschmidt, you can call round at the office any day except Sunday and put the "half Nelson" on me.

Hen Linnet Mules (W.J.D.).—Hen Linnet Mules are very easy to tell from cocks, in most cases, by those who have bred the cross. The inexperienced cannot hope to successfully do so, however. The hens are usually smaller (comparatively), much more dingy in ground colour (being especially pale at the throat), and much more streaked and marked with "pencilling" on the breast, etc. The cocks are a warmer (browner) tone of body colour, and have distinct indications of warm (almost Canary) colouring on the face, throat, and breast. The sexual distinction, and especially so in birds in adult plumage, is well marked, generally speaking, and ought not to bother you much once seen and grasped.

Another Skylark Sneezing (H.J.).—Read reply to "A. G." in this column this week, and act on the advice therein. Feed as recommended at length last week.

Feeding Young Mules After Leaving Parents (W.B.).—No wonder you lost your young Mules, seeing that you say you gave only "mixed seed" after taking them away from their parents. Poor little beggars! It is a very mistaken policy to leave off soft food as "soon as possible," and I am sorry to hear you followed such advice and suffered so seriously. The egg should be gradually left out of their diet when they are three weeks old or so, but certainly not the soft food. When they are taken away from their parents, give bread and milk sop (or biscuit and milk), well sprinkled with maw seed, freely each day. In addition, offer canary and maw seeds, soaked summer rape, and

ughtly cracked hemp. A few crushed sunflower seeds should also be thrown in daily, increasing the quantity as the birds get older, and gradually dropping the hemp; at this stage also gradually discontinue the milk sop and soaked seed, giving occasional feeds only. If colour-feeding, give the sweet pepper in egg cake (a recipe appeared in our correspondence columns last week), letting this take the place, of course, of the milk sop. A few groats occasionally are relished; but the above "menu" is full enough for all practical purposes. Some fanciers, I know, will not give young birds green stuff after they have taken them away from their parents. But this I consider a huge mistake. I don't believe, mind you, in stuffing them with lettuce, watercress, and the like. What they want, and what is extremely beneficial to them, and conducive to their successful rearing, is a free supply of the "seeding green foods," if I may use the term, meaning the seeding heads of chickweed, shepherd's purse, grass, groundsel, plantain, and the like, especially the two first-named. I have tested the matter many a time, and know that seeding sprays of shepherd's purse and chickweed cannot be beaten for young birds. And what a difference it makes to the look of their coats, too! It should not be gathered smothered in dust from the roadside, however. Strip off the larger leaves.

Linnet "Wheezing" (Thankful).—Your letter is far from clear. I do not find it easy to imagine a Linnet which wheezes only when it commences to sing; yet you say this is your trouble. Try a course of the glycerine and honey advised "A.G." this week. It cannot do any harm, and if the bird has a slight cold or hoarseness, it should remove it. It will be no use pairing him up until he is in full, vigorous song, and he has a blue-black coloured beak. For hints on Hybrid breeding, see other replies given within the last few weeks, also the articles which have lately appeared in our columns. There is a very good one in the 1907 ANNUAL, too. What sort of hints do you require?

Canary Seed Samples (B.H.C.).—Neither sample of canary seed is at all bad, though I have seen better. The one at 2½d. per lb. seems to be really excellent value, bright, good to the taste, and with plenty of kernel. The one at 4d. is not worth paying the difference for, though it is a very tidy sample. Whether genuine Spanish or not, I prefer to pass no opinion.

How Many Goldfinches? (H. Williams).—The friend who told you that if you kept three cock Goldfinches with six hen Canaries in your outside aviary, 11 ft. long by 6 ft. wide, they (the cocks) would be sure to "quarrel and fight and tear the nests to pieces," is decidedly out of it. Why, a lady friend of mine, who is blessed with scruples on the score of polygamy, kept six cock Goldies and six hen Canaries last season in a place hardly half the size of yours, and experienced no trouble at all in the directions you indicate, or, in fact, in any way. Unfortunately for me, before she started, I told her she would be certain to do so. "How are the mighty fallen, and believers in avine morality vindicated!" I murmured to myself at a later stage. I found out long ago, however, that the less you have to say about what birds will and will not do the better it is for one's peace of mind. Unfortunately, fate compels me to go on saying things. But go ahead with your three cocks and six hens, remembering only that if any of the nine seem viciously disposed they must be removed. I omitted to mention that the lady above referred to kept each couple in a separate cage for a short time before turning them out into the aviary, all at one time. I recollect I used this fact to cover my own confusion.

Feathers In a Sparrow's Tail (C.B.R.).—There are the same number of feathers in the tail of a Sparrow as there are in the tails of other members of the Finch family, viz., twelve. I know no reason why the bird should have either more or less, so can pass no opinion as to the why and wherefore of people debating and betting on the matter. Possibly there is some catch in the question—as they put it, anyway.

Song of a Bullfinch (T. Soar).—Yours is one of the oddest communications I have struck for many a long day. You say you have a "Bullfinch in splendid condition, caged separately in a room with Canaries, which does sentry-go from perch to perch, pipes a clear note or two, then squats down and appears to commune with himself in a 'creaky-hinge' kind of voice, as if he were trying to imitate a Canary's song." "Will it develop into anything?" you ask. It will not develop into anything other than it is at present, viz., the natural "song" of the Bullfinch tribe. The "clear notes" are the call-notes of the Bullie family, and the "creaky-hinge communing" hits off the family song to a nicety. Bullfinches behaved exactly as your bird is doing for ages before he saw the light of day; and hundreds will continue to do so for ages after he is no more—that is, providing this poor old world goes on existing, and misses the comets and things "Old Moore" and others threaten us with. As regards your chances of mating him with any hen, read another reply on the point which appears this week.

Questions Concerning Large Softbills (R.S.H.).—I am always in the habit of letting any Larks, Thrushes, or Blackbirds I keep have access to a pot of grit of suitable size; not necessarily every day. Larks require a dust bath; see many answers last week. If sawdust is used on the cage bottoms, apple and other fruits should be given in a fruit rack, which can be bought for a penny or so at most bird shops, and from all the large advertisers in our "Appliances" column. It is fixed against the front wires, outside the cage. It is not nice to see sawdust swallowed wholesale with food, and it is bound to be harmful. Some organs of the body cannot help but be taxed in the disposal of it. White and yolk of egg should both be used when preparing food for large Softbills; I used to give white alone when I had a call for yolks in the rearing of young Mules. Egg flake is a good substitute for hard-boiled egg, and I prefer it to the granulated egg. It is yolk of egg, dried by heat, the whites being used in some form of leather preparation, I believe.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

What Parrakeet, etc.?—(1) What kind and sex is my bird? (2) Can I teach it to talk? (3) Is there any difference between Green Indian Parrakeets and Ring-necks?—ENQUIRER.

(1) It is a Ring-neck Parrakeet. Its sex cannot be told yet. When it is adult, if it is a male, it will have a ring, if a female, it will remain much as it is at present; however, I incline to the opinion that it is a young male. (2) Yes, many of this species learn to articulate words very distinctly. Make use of both methods in training it, viz., constant repetition, and keeping it where it will hear plenty of conversation. (3) None whatever.

Galah Parrot.—What is the treatment for an Australian Galah It is losing all its feathers.—"SENNICAM."

Your bird is commonly known as the Rose-crested Cockatoo and is a hardy and enduring species. Give it for one day only one teaspoonful of Dinneford's Magnesia in its drinking water; and follow this for a month at least by making its drinking water the colour of pale port, with Parrish's chemical food. Diet: Make your own mixture—Canary, oats, wheat, hemp, dari, equal parts, with a sprinkling of sunflower seed. Give also green food, ripe fruit, nuts, plain biscuits, raw carrot, and a little boiled potato (dry). Keep up regular supplies of grit and cuttlefish, and let it satisfy its thirst with the prepared water three times a day. Spray it once a week with chilled water, and keep out of draught till dry. If you observe it plucking its feathers, treat as advised to other correspondents.

Java Sparrows.—I am very anxious to breed with my birds, but so far the cock merely takes nesting material in and out of nest, and they do not settle down. How can I stop this, and how must I feed when they have young?—P. YALDWYN.

Wild-caught Greys do not take kindly to nesting in captivity, the best way to get a free breeding strain is to get a white hen and pen up with a Grey cock; the resulting young would be nearly all pure Greys; what few pied specimens there are, are usually very handsome birds for the aviary. The young also breed freely when paired with imported Grey birds. However, as you have got so far, I should say they would most probably breed before the year is out. Give a little of some good soft food mixture when they have young to feed, or the following would be excellent for the purpose:—Crushed Osborne biscuit, good ants' eggs, dried flies, and a little crumbled sponge cake; well mix and slightly damp. If you decide to try with your Greys, you will have to leave them to take their own sweet way. Keep them clear, and attend to their wants, but do not be too curious as to what is taking place in the nest box.

Breeding Parrots.—I have Grey and Amazon Parrots, very friendly together. Could I put them into one cage, and have they ever been known to breed?—P. S.

It is a very risky experiment, and I cannot advise you to attempt it, in spite of their apparent friendliness. I am of the opinion that to put the birds in one cage would result in one or the other being killed. However, in a large garden aviary you could make the attempt with a reasonable chance that they would not materially molest one another. Separate food and water hoppers should be placed some distance apart. I believe Grey Parrots have bred in a gentleman's park, where they were flying loose; it is quite possible that in a sufficiently roomy aviary they would ultimately reproduce their kind. At the same time it must be borne in mind that these birds usually take two or three years to settle down before doing so. Unless you can give such quarters do not make the attempt.

Budgerigars.—(1) What is their food when they have young? (2) I have two pair in a cage; they do not agree, but break one another's eggs. What do you suggest?—H. T. W.

(1) This has been fully answered in another reply to which I must refer you. (2) It is not often that these birds disagree, they usually breed together in perfect harmony where the sexes are equal. The only thing I can suggest is to remove the pair that are causing the trouble. Leave in their present quarters the pair that have laid, and they should settle down and hatch out a brood, as should also the other pair in another cage. How many husks have you in the cage? If only two, put up two more, and this will probably end the trouble for you.

Cutthroats.—My birds have laid; if any young are hatched, will they rear on seed alone? They will not touch mealworms or soft food.—B. H. C.

You have quite an extraordinary pair of birds—Cutthroats won't eat mealworms! However, I do not think this need trouble you; they are excellent feeders as a rule, and will rear on seed alone, though my birds, while eating freely of seed themselves, feed the young on dried ants' eggs almost exclusively. But I must say all my Cutthroats are "pigs" at mealworms. I should certainly suggest when the young are hatched, that you scatter a few ants' eggs about; also keep a small saucer of crushed Osborne biscuits, ants' eggs, and dried flies in equal parts. Supply this dry, as they are not partial to damp food.

Budgerigars.—(1) What is their food? (2) What nesting material do they require? (3) What food when they have young? (4) How can I tell cock from hen?—H. BIDDLE.

(1) Canary, white and spray millet seeds, green food, cuttlefish, grit, and water for drinking and bathing. (2) They require no nesting material; simply hang up two cocoanut husks for each pair of birds. (3) Give in addition to ordinary food, oats, a liberal supply of green food, and a dry crust of stale household bread. (4) The cere on upper mandible is bright blue in the male and reddish buff in the female, when they are in breeding condition. Supply your bird with as roomy quarters as possible; keep them out of draughts; treat as above, and they should do well.

Blue-fronted Amazon.—My bird mopes, is very thirsty, and shivers, but now and then he livens up. How can I treat him?—"ANXIOUS."

Get one quart each Canary seed, oats, wheat, dari, and one pint each hemp and sunflower seed; well mix, and let this be your staple diet, of which a supply is always in the cage. Give twice a week a little boiled maize (this only keeps fresh one day). Also give, to vary the diet, ripe fruit, nuts, green food, plain biscuit, boiled potato (dry), and regular supplies of grit and cuttlefish. Let it satisfy its thirst three times a day. Keep it warm, quiet, and out of all draughts. Make its drinking water quite saline with Epsom salts for one day only, repeating the dose in a week's time. On other days colour its water (about like pale port) with Parrish's chemical food, and let it have as much cuttlefish as it will eat. Note whether it is pulling out its own feathers. Do not give slops.

What Birds?—I have an aviary covered in with 1in. mesh wire netting. What can I keep with Budgerigars (not Cockatiels) that will breed freely?—"GOOSE."

Red Rosellas would do as well as any and once they settle down to breeding are almost as prolific as Cockatiels. White-eared Conures would also answer, but are unreliable breeders. So also would Blossom-heads, and when adult should make free breeders; but the difficulty is in getting a true pair; there is so little difference between the sexes. Mealy Rosellas are also breeders, but are more expensive, and not so reliable as to breeding as their Red relations. Cardinals would also do with the Budgerigars, either the Red-crested or Green variety; but they do not always rear their young, even when they hatch out, and at this time need a continuous supply of live insects.

What Parrakeet?—(1) Can you name my bird from description herewith? (2) Is it possible to get them to breed in a cage 36 by 27 by 24 inches high?—"PARRAKEET."

(1) Your birds appear to be some form of immature Ringnecks. After the moult they will probably change materially in colour; when this takes place, repeat query, and I shall be pleased to say what species they are. (2) Not very probable; still, certainly not impossible. Put in their cage either a small barrel, hung longitudinally, or a nest box, say 10 by 8 inches, with a concave bottom. I do not think you will find any of the genus *falcœrulis* (which yours evidently are) attempt to breed till they are fully two years old. If you notice any sign of nesting do not be too curious, and leave their nest box untouched till such time as young leave the nest. Do not neglect to keep them supplied with cuttlefish, and the egg shells left from your table, crushed and scattered on sand tray, should preclude any possibility of egg-binding.

Black-backed Tanager.—I saw a so-called Black-backed Tanager at the British Museum (*Papridea*). Are there two birds known by this name? It would be very annoying to get one for the other. It is not nearly so beautiful as the Calliste.—E. ROSE.

The *Papridea* are a group of Manikins ranging over South America and are stout thick-set birds, and shorter than a Tanager, and certainly are not anything like the Black-backed Tanager seen of late years on the show bench. I'm afraid in the past I have not taken sufficient notice of the various fancy names given to birds, and I was certainly unaware of the fact till I got your query that this particular one was applied to two species, as it evidently is. In the event of your getting the opportunity to purchase one of these birds, I should certainly purchase it on the understanding that if it was not a Calliste you would return it. It will be an expensive purchase unless an unexpected number should come to hand.

Cockatoo Ill (F. J. H.).—You must note that replies have to be forwarded to me and in your case only one post was lost. I am glad to note your bird is better. I certainly did not think it would recover; in fact, expected to hear it was dead before my reply reached you. Continue to treat as advised; keep the bird warm; do not leave water in its cage; let it satisfy its thirst three times a day. The lettuce would not harm your bird if given in a fresh and clean condition. I use nothing else myself but I get the kind known as French lettuce. Only sound and clean leaves are given; after washing it is left to drain before giving to the birds. Hope the bird will continue to improve.

Aviary Queries.—Is it still too early to commence breeding preparations? Should they be put in separate cages, or will they breed better in the aviary altogether? In another large aviary in same room I have Cockatiels, Budgerigars, Lovebirds, Cardinals, etc. Will they agree and breed all together? Can you name a book on Foreign Birds?—D. WHITE.

Regret to hear of your loss. If you have your birds in a room from which frost is excluded it is not too early. If they are in an ordinary cold room do not supply nesting material or accommodation for another three weeks. It may be taken as a general axiom that unless the birds are in a fair-sized enclosure and not at all crowded, they will agree together and breed, providing sizes are not too much mixed. If you merely mean Crystal Palace type cages, then these are only suitable for odd males, which should agree and sing. But for breeding, each pair should have a roomy box cage. Canaries in a group in one enclosure usually do little else but chase one another about, but breed freely caged up in single pairs. Cockatiels, Lovebirds, etc., will agree together and some of them breed, providing their enclosure supplies them with sufficient space. You must hang up cocoa-nut husks for the Budgerigars, etc., and concave bottomed nest boxes (should be similar to a small dog kennel with a concave bottom) for the Cockatiels. Put these up at once, and leave the birds to themselves, and the Budgerigars and Cockatiels should soon settle down to breeding. You would find "Favourite Foreign Birds," 2/9, and "Popular Parrakeets," 1/3, both post free from CAGE BIRDS office, useful handbooks.

Grey Singing Finches.—Please describe these, and give sexual distinctions.—W.R.J.

This species is a very plainly yet delicately coloured little bird. The upper parts are grey, streaked with dark similarly to the Linnet; the under parts are whitish, and the beak is yellow. At first there is no difference between the sexes, but the male has a patch of clear white in its throat; this is not any too apparent save when the bird is singing, then it is plainly visible. From examination of skins and living birds I have been unable to find any other distinction than that named above. A good singer of this species is a treat indeed; its song is varied, very sweet, of good compass, but yet not sufficiently loud to jar on the most sensitive nerves. Once acclimatised it is a hardy and enduring species; it is also very ready to breed in captivity, and will live out of doors all the year round in a suitably constructed aviary.

Shama and Mynah (Q.).—Both these birds require much the same treatment, and should be kept in a roomy cage, where the temperature does not fall below 45 deg. F. They are not delicate birds, but are somewhat susceptible to draughts. Diet:—Soft food, ripe fruit, live insects (say 12 mealworms each bird daily); they will eat almost any insect that crawls, flies or creeps save hairy caterpillars. A little minced meat (say about an inch cube) once or twice a week, and green food, with a continuous supply of water for drinking, and a daily bath. Soft food:—A good mixture consists of: Game meal, ants' eggs, dried flies, crumbled sponge cake, and boiled potato in equal parts; well mix and give crumbly moist. You must consult the birds' respective tastes. The Hill Mynah will eat much more fruit than the Shamah. On the above treatment my birds have not ailed anything from the day I had them. A good cage is a square one, 22 in. square at base, and about 24 in. high. This I consider a minimum size. They must be kept very clean.

Birds for Aviary (Norman).—I do not remember the details of your previous query, but I should not advise you to put birds out of doors at this season; but I presume you are keeping them indoors till May. Cordon Bleus are delicate when first imported, and losses with new purchases are rather numerous; but if you put them out of doors as soon as the cold nights have passed (not quite so soon as the other kinds), they can then be left out of doors altogether. Yes, your assumption is quite correct; the hen Cutthroat has no crimson neck band. Hope you will have luck with your birds.

Amazon Parrot with Cold (New Reader).—Your diet is quite satisfactory. Keep this bird strictly out of draught, and for a time at least it would be better in a room where a fire is burning most of the day, and its cage should be covered round while the room is being cleaned and aired. Get the following mixture from your chemist:—Equal parts of ipecacuanha wine, oxymel of squills and glycerine. Put half a teaspoonful of this mixture into two tablespoonfuls of water, and let the bird have only this to drink till relief is given. Also spray, or dab with a camel-hair pencil, the bird's nostrils with diluted glyco-thymoline; it will do no harm if a little is swallowed. If it becomes at all constipated treat with Dinneford's magnesia, as advised to other querists in this issue.

Cockatiels and Budgerigars (A.B.).—I should not attempt to put Finches of any kind with Budgerigars, as sooner or later disaster follows. Cockatiels agree well with Budgerigars, and the same food satisfies them, as also do Madagascar Lovebirds. I am rather in a difficulty, as the size of your aviary must very largely influence my reply. However, if you allow one foot of frontage to each pair of Budgerigars, and two feet to each pair the size of Cockatiels, you should be all right. You could also keep a pair of Rosellas with them; these should have 3 ft. of frontage allowed them. Of course, these measurements are not divisions; all the birds would be flying together, but the length of your frontage must regulate (as above) the number you keep. You must put up sufficient husks and nest boxes of suitable size to allow two to each pair of birds. All the above would thrive on canary, millet, oats, with a little hemp thrown in occasionally; green food, a little ripe fruit, grit, cuttlefish, and a continuous supply of water.

Concerning a Grey Parrot (New Reader, Surrey).—(1) A Grey Parrot is better without a continuous diet of boiled maize, but such must frequently be given for a time to newly imported and young birds. I should advise your giving only one tinful daily, and when you find it eating the dry seed mixture freely, gradually drop it altogether. Add white sunflower seed to your mixture. If you study other replies you should get many hints. (2) Put one teaspoonful of Dinneford's magnesia in the drinking water for one day, and repeat same in a week's time; on other days give Parrish's chemical food as directed to other querists. A few chillies among its seed should check the sneezing. (3) There are two methods: Constant repetition, and keeping it where it will hear general conversation. I advise you to try both.

Parson Finches (A. E. Gray).—I cannot hold out a strong hope that you will succeed in breeding these birds in a cage; it should at least be as large as a double-breeding cage, and of the box type. Simply fit up your cage, and put them in, and then, save for cleaning and supplying their needs, leave them to themselves. A Hartz travelling cage, with the fittings removed, makes about the best nesting receptacle. Supply longish hay, and a Canary nest-bag for material. Diet:—Canary, white and spray millet, crushed oats, and rice in the husk, green food, cuttlefish, grit, and water for drinking and bathing. Keep the sand tray well covered with grit, and mingle with same old mortar rubbish if you can get it, also crushed egg shells from your table, so as to obviate the danger of egg-binding. Supply also the following mixture regularly while they have young to rear, and occasionally at other times:—Equal parts of crushed Osborne biscuit, sponge cake, ants' eggs, and dried flies. Well mix, and slightly damp for use.

Indian Parrakeet (Gapes).—Give your biscuit dry, and otherwise diet the birds as advised in other replies on Ring-necks and Indian Green Parrakeets in this issue. Make its drinking water quite same with Epsom salts for one day, and follow this with a course of Parrish's chemical food as advised to other querists. Keep strictly clean, and out of draught, and the bird should soon be in condition again.

Breeding in Cage (Percy).—I recommend you to have only one pair of birds. Zebra Finches you would find interesting and pretty birds, easy to keep, and almost certain breeders; value 3/6 to 4/6 per pair. Diet:—Canary, white and spray millet, green food, grit, cuttlefish, and water for drinking and bathing. When they have young supply a little crumbled sponge cake, crushed Osborne biscuit, and ants' eggs in equal parts. Put up a nest box at either end of the cage, and supply long grass and hay as nesting material. You will have no success if you try breeding with two pairs in one cage. Repeat your Canary query next week to our Mr. North.

Grey Parrot (E.S.).—(1) The diet you name is very satisfactory, but you must add ripe fruit, etc., to what you give—see other replies. An adult Parrot is better without boiled maize, and I should advise you to gradually wean your bird from same if adult; one tablespoonful, after boiling, should be ample. (2) Septic fever; but your second bird most probably contracted the disease from your cage. A cage which has been occupied by such a bird as the one you lost needs thorough sterilisation before it is safe for use again. It wants immersing, if possible, in a copper of boiling water, and having the water thoroughly swilled into every crevice of such parts as stand out of the water; afterwards paint it with neat paraffin. Let it stand for a couple of days, and then finally swill with clear cold water. When dry it should be safe to use.

Indoor Aviary (Budg.).—If, as I presume, you are simply partitioning off a portion of a room, I should advise covering the floor with zinc, or, if that is not possible, with linoleum, and on the top of this at least an inch thickness of sand. This could be raked over frequently and renewed as required. If you are making a portable aviary, see that the bottom is sound, that grit will not come through joints; and cover with sand, as above. I do not approve of peat moss litter for Parrots or Parrakeets; they sample everything they can get their bills on, and it is not good for their digestion.

Blue-wing Lovebirds and Turquoisines (T.T.S.).—They are totally different birds. The Blue-wing Lovebird, or, more correctly, Passerine Parrakeet, is a bird about the size of a Budgerigar, but stouter, and with a short tail. The male is green with flights, lower back, and upper tail coverts, bright blue; the female is all green. The Turquoisine is a very rare bird, though some years ago it was fairly common; but I have not seen a living specimen for some years. It is a most desirable bird, about the size of a Cockatiel. It is beautiful, with plumage nicely variegated with yellow, green, blue-green, turquoise blue, chestnut red, with beak and legs of dark brown. Canary and millet should form the principal diet, with green food, grit, cuttlefish, a little ripe fruit, and a few oats. They are, as a rule, very amiable, and may be kept in almost any company, providing the aviary is not overcrowded.

Grey Parrot Moulting (A.E.).—(1) The correct diet you will find in other replies in this issue. Let it have as much cuttlefish as it will eat, and just colour its drinking water with Parrish's chemical food till it is through the moult. You did quite right in changing the diet, and I should gradually wean it from the boiled maize altogether. (2) You must spray her, at this season once a week, and keep her strictly out of draught till dry. Get a spray similar to a hairdresser's (these are about the best), and use chilled water. (3) Have, say, a plain biscuit, ripe fruit, and other wholesome items of her diet on your table, and when she calls out give her a little; this should help you out of your difficulty.

What Bird? (P.N.O.).—It is a Green Singing Finch, and males can generally be secured at from

5/6 to 7/6 each. These are not delicate birds, but they cannot stand draught, so if your cage is an all-wire one it must be stood where the wind cannot blow through it. Diet:—Canary, white and spray millet, with a little rice in the husk and crushed oats as extras; green food, small turf of grass, a little ripe apple, pear, etc., grit, cuttlefish, and water for drinking and bathing. Make its drinking water just saline with Epsom salts for one day only, and follow this by slightly colouring the drinking water with Parrish's chemical food for about a month. You must not use a metal drinking vessel while giving drugs. Get a few mealworms, and give it two or three of these daily; it will soon acquire a taste for them. You must not give green food of any kind that is at all tainted with frost.

Grey Parrot Ill.—My bird, which I have had for 31 years, has recently gone off its food, is thin, at times sick, and is evidently suffering from a bad cold as well.—"BURTON FIDSEA."

Give your bird half a teaspoonful of Dinneford's magnesia, either on a piece of sponge cake, or something similar. Refer to recent issues for diet. Do not give table scraps, slops, or animal food of any kind. The bird's bowels must be kept gently moving, not loose, and you must repeat the magnesia as necessary for this purpose. Get from a chemist a mixture, equal parts of ipecacuanha wine, oxymel of squills and glycerine; half a teaspoonful of this mixture to be put in the drinking water daily till relief is given. Do not use a metal drinking vessel while giving drugs. Spray or dab (use camel-hair brush) the bird's nostrils with glyco-thymoline. Keep the bird as warm as possible, but not in too dry a heat. Tempt appetite with a crust, plain biscuit, ripe fruit, or such like.

Cordon Bleus.—My birds, when they had moulted, only partially resumed their feathers, and have remained so for months; they appear in good health, but the hen is not so strong as her mate.—M.B.P.

Let these two birds have a cage to themselves, keep it in some warm position free from draught; keep sand tray covered with some good bird grit, also continuous supply of cuttlefish, and let the birds indulge in a bath as often as they desire. Keep their drinking water just coloured with Parrish's chemical food for the next month. In addition to the seed diet, give them a little crumbled sponge cake daily, mixing a few ants' eggs with same, also sprinkling with flowers of sulphur. If the panting of the hen continues, give, say for a week, quarter teaspoonful of the following mixture: Ipecacuanha wine, oxymel of squills, and glycerine in equal parts, in its drinking water for a week, and afterwards continue the chemical food. They are evidently constitutionally weak, but with treatment as above should gather strength and regain their plumage after next moult. If the skin of the bare parts is very dry and rather hard, and you can handle the birds without badly scaring them, lightly rub in a little vaseline, but do not make them really greasy.

GENERAL.

Answered by the EDITOR.

Report (W. Jeremiah).—Thanks for your kindness in sending notes.

Choked (J. R. Algar).—Thanks for the interesting clipping you send.

Catching (H. Crookham).—We can send you the numbers for 6d. (postal order).

Photo (J. Jones).—Thanks for the interesting photo you send, which we shall hope to reproduce.

Papers (A. Parks, S. M. Clayton, B. Cook).—Accept our thanks for papers received, which we shall hope to print in due course.

Club Notice (J. W. Rennie).—Your notice of meeting on March 13th only reached us on March 9th, much too late to be of use. See another reply this week.

A Little Misunderstanding (Mrs. G. M. B.).—We are much obliged to you for your disinterested efforts in this matter, and thoroughly appreciate your kindly expressions.

"Deathless Rhyme" (W. Curry).—We perused the "poetry" your friend has "put together," as you term it, with considerable interest, and shall hope to feel equal to the task of printing it next week.

Holder for Feeders (T. Soar).—Pleased to receive contribution for "Illustrated Ideas" from you. But may we point out that the holder you submit is similar to one which may be bought at any bird shop? We want novel ideas above everything.

"Inhuman Bird Catching" (P.D.).—We cannot guarantee the appearance of letters in our correspondence columns on any particular date. We always insert them as soon as possible, but pressure of matter generally is the determining factor.

Promise of Articles (A. E. B.).—We shall be very pleased to receive the promised articles whenever you can make it convenient to forward them, and while thanking you for the offer, take the opportunity of wishing you every success on the other side of the "herring pond."

Pictures of Birds (W. H. McD.).—We thank you for calling our attention to this matter, which shall have our fullest consideration. As no doubt you will have foreseen, the chief difficulty lies in getting sketches. Can you offer any suggestion on that point?

Cocks Amongst Hens (J. Kay).—We only wish the sex of Canaries could be shown by means of drawings. Did it not occur to you that if it were so simple a matter the judges would hardly be deceived into giving cocks prizes in the hen classes? Thanks for your other kindly remarks.

Use of Egg Cake (W. E. Brown).—Fanciers differ on the point as to whether egg cake should be moistened or not. Much depends on the hardness or otherwise of the cake. The more general rule is to make it just crumbly moist when the hens are feeding young. Otherwise it should be given as baked, without any addition; it need not even be crumbled.

Club Notice Too Late (S. Skelton).—Sorry, but your club notice reached us after we had gone to press. Notices should arrive here by Tuesday's post to be certain of insertion in our issue of same week. Wednesday evening's post is much too late; we cannot guarantee the insertion even of those received first post on Wednesday. Thanks for report of meeting.

Canary Breeding (A. W. M. Artyr).—You have somewhat mistaken the purpose of our specialists' and query columns: they are to afford help in times of difficulty. To answer your "nine elementary queries," as you call them (in reality twenty-nine) would need a whole page, if not more, of CAGE BIRDS being devoted to them, for they practically cover the whole art of breeding. Send 1/2 (postal order) to our manager, and he will forward you post free a fully illustrated, up-to-date "Canary Manual," which will give you all the information you ask, and a good deal more besides. Any special problem our specialists will be pleased to unravel for you. But don't ask more than three questions at once, please.

WALTHAMSTOW F.A. DINNER.

A most delightful function was the dinner of the Walthamstow F.A., which took place at the Brewery Tap Hotel, on February 21st. Mr. J. S. Clarke presided, Mr. C. A. House being in the vice-chair. Amongst the company, which numbered nearly 50 were Mrs. Clarke, Mr. and Mrs. Burton, Mr. and Mrs. H. Farmer, Mr. and Mrs. R. Farmer, Mr. and Mrs. Dyson, Mr. and Mrs. Lovell, and Mr. and Mrs. King, Mr. and Mrs. Mead, Miss Henderson, Dr. Corner, Messrs. Baldry, Cole, Aistrup, Roll, Hough, Wellum, Williment, Norris, Andrews, Naish, Morris Bros., Smith, Sherman, Broomhead, Warren, Firkins, Redding, Sargent, Handscombe, Brown, etc. The loyal toasts were given from the chair. Mr. C. A. House proposed "The Walthamstow Fanciers' Association," referring to its inception 13 years since, to the vicissitudes through which it had passed, and its present flourishing condition. He associated with the toast the names of Mr. Clarke, who he said was a splendid leader, and Mr. Mead, who was one of the keenest and most enthusiastic secretaries he had ever met. Mr. Clarke, in response, said he was proud of his position as chairman of the Walthamstow Fanciers' Association, proud of the society, and proud of the members, who were a real good lot. He had not, as chairman, pleased everybody, but he had tried always to hold an even hand, and it mattered not to which section a man belonged, he was just a member of the whole. People spoke slightingly of mixed societies. They did not understand them. They removed from a man's mind many errors and broadened his ideas. Mr. Mead said the W.F.A. had never been in a better position financially than it was at the present time. It had 130 paid-up members; its last two open shows had been great successes, and its members' shows during the year had been well supported, whilst the competition had been keen. He was sorry Mr. Bishop, the treasurer, was not present, because he was one of the hardest workers in the W.F.A., and much of its success was due to him. It was his (the speaker's) desire to see the W.F.A. the best society in the south. They had some grand workers amongst the members, and the future was most hopeful. Mr. King proposed "The Visitors," to which Mr. Sherman responded, expressing his great delight at being present, a delight so great that he had decided to ask them to accept a cup from him for competition, under the conditions to be decided by the chairman and secretary. Mr. House gave "The Dinner Committee and Artistes," and Mr. G. Firkins responded. During the evening a splendid musical programme was contributed by Mrs. King, Master Messing, Messrs. H. Farmer, King, Sharp, Sherman, and Mead. Mr. Dyson gave a clog dance, and Mr. Brown presided at the piano. "Auld Lang Syne" brought a most enjoyable evening to a close.

Experienced CANARY FANCIERS

Use and .. Recommend

SPRATT'S

COD LIVER OIL

CAGE BIRD FOOD

FOR

Young Cage Birds from the Nest.

Mr. WM. HIRD writes:

HIGH STREET, HANGING HEATON, nr. DEWSBURY, *August*, 1906.

"I am highly pleased with your Cod Liver Oil Cage Bird Food. It is a most suitable food for the birds, and gives good results, both in the rearing of the young birds and in the production and quality of the feathers, and I shall recommend it to my brother fanciers.

Sold by all dealers in **3d.** and **6d.** Tins; post paid **6d.** and **9d.**; 7-lb. Bag, **2/6**, or post paid, **3/2**.

Send postcard for Samples, also **Free** Booklet on "Canary and Cage Bird Rearing."

SPRATT'S PATENT, LTD

24 & 25, Fenchurch Street, LONDON, E.C.

ILLUSTRATED IDEAS

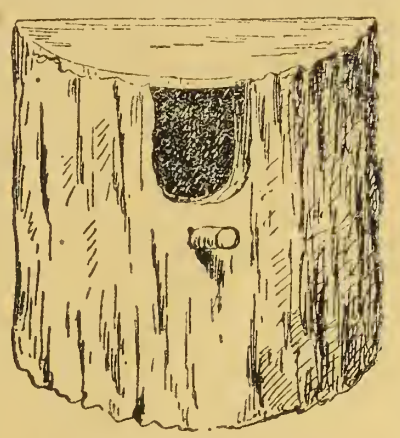
Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 83.

A CHEAP BUDGERIGAR BREEDING BOX.

Sent by E. G. Cliffe, 18, Church Green, Witney, Oxon.

Now that the Budgerigar breeding season is coming on, the enclosed sketch of an inexpensive breeding box may be of interest to your readers. The back and top is an ordinary plain board, whilst the rounded front,



A Budgerigar Breeding Box.

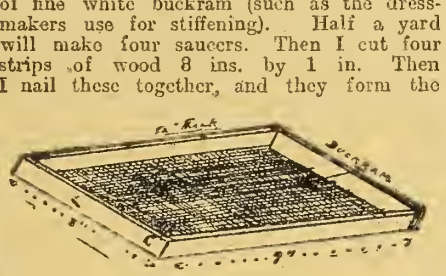
also the bottom, is made of small pieces of cork bark, with a small perch of same fixed on in front. The whole may be bought for a few pence. The birds seem very happy and quite at home in the box.—E. G. OLIFFE.

No. 84.

TO ECONOMISE THE SAND.

Sent by J. L. M'DONALD, 112, Imeary Street South Shields.

I enclose rough sketch of a sand-cleaner, which I have used with great success. It is simply made and costs but a copper. First I bought from the drapers half a yard of fine white buckram (such as the dressmakers use for stiffening). Half a yard will make four saucers. Then I cut four strips of wood 8 ins. by 1 in. Then I nail these together, and they form the



A Sand Economiser.

frame. Then with a small brush put some glue on the bottom edge. Take the buckram and stretch it on right round. Leave it to set, then trim the edges with a pair of scissors. The sketch will explain the idea. I empty my sand-trays into the saver and shake it well. All that runs through is fine, clear sand; all the seed-husks, etc., are left behind. Of course, the contents of the trays of any cages containing ailing birds I throw entirely away.

A Note to Readers.

We hear from Messrs. Dobbie and Co., the well-known fanciers' providers, of Leith, N.B., that the "attachment and support" of the mite-proof nest bracket given last week as "Illustrated Idea, No. 81," infringe the patent of "Paull's Anti-redmite Nest Bracket." as manufactured and put on the market by them. We must express our regret that we should have inadvertently trespassed on Mr. Paull's idea, and take this opportunity of warning readers that they will render themselves liable to legal action if they make the said nest bracket. As a matter of fact, it is not worth their while to do so, as the idea, in an improved form, can be obtained from Messrs. Dobbie at a cheaper rate than that at which it can be made.

REVIEW OF SCHEDULE.

Llandudno (C.B.U. rules).—Held April 4th, in the Hippodrome. Seven classes; judge, W. C. Roberts. Nor. 2, Yorks. 1, A.O.V. 1, Mule 1, Brit. 1, For. 1. Prizes, 7s. 6d., 4s., 2s.; fee, 1s. Entries close March 28th, to W. YATES GREGOR, the Hon. Sec., Maisonette, Queens's Road, Llandudno.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original bits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

When Uncle Peter was about ten years old he began to long for a pet bird of his very own. Up till then he had lived on a farm, and each of the children had their own pony and puppies and kittens, besides white bantams, tame pigeons, rabbits, ducks, and fowls—as many as they cared to possess. But when Peter's parents thought it was time for him to go to school, they took him to live in a town, and at first he felt very sad without any of his pet animals to play with, for, of course, they were all left behind at the farm, there being no room for them in a town house. Then it was that Peter began to set his heart upon birds, and he thinks it may be interesting and helpful to all of you, his nephews and nieces, if he tells you what birds he kept, and how he kept them. For, although when he began Uncle Peter was only ten years old, he had to look after his pets entirely on his own account, with such help as he could beg from his parents and friends. Peter's first bird was a Bullfinch, a birthday present from a schoolfellow, and next time Uncle Peter will tell you all about this Bullie, whom, on account of his bright red shirt, he named Garibaldi.

*** * My Linnet.**

I have a nice tame little Linnet. I have had him three years, and he seems as young to-day as when I had him. He will sit on my hand and feed, and will not attempt to fly away. He can sing as well as our Canary, and when he is hanging on the wall in our garden he often mocks the Sparrows when they chirrup. I often let him out in my bedroom, and he will fly about the room. He is not a bit afraid, and he will settle on my shoulder; then he will go into his cage and have some food, then have another fly round the room.—SIDNEY ROBBIE (age 9), 51, College Street, Upper Street, Islington.

*** A Story of a Clever Parrot.**

Some years ago my aunt had a very clever Parrot, which was always trying to free itself from its cage. She therefore, in order to stop this, ordered a padlock, and the man who brought it advised her to have one with a spring, and showed her how to work it. Meanwhile the Parrot watched him carefully. It was put on, and my aunt went out of the room. She came in, to find that Polly had got the padlock in her beak. She told the man, and he said it was impossible. He fitted it on himself, and they both watched quietly. Presently Polly took the padlock in her claws, pressed the spring, and pulled out the hasp with her beak. So my aunt had to get a key for the next padlock.—Sent in by T. E. REVES (aged 11), 7, Richmond Park, Clifton, Bristol.

*** Habits of the Swallow.**

The Swallow comes to this country in April, and generally leaves again in October. Its nest consists of a cup-shaped structure of mud or clay, lined with soft grasses, feathers, and other material. The bird does not sing much, but merely twitters. The eggs are white, spotted with red, and are usually four to six in number. Its food consists of insects, which it catches while on the wing. The bird is easily recognised by its long forked tail, which is always widely spread during flight.—FLORENCE CHALK (age 11), "Iona," Hankinson Road, Winton, Bournemouth.

Two Java Sparrows.

I have got two Java Sparrows, whom I call Cheeky and Cheepy. Cheeky especially is a very funny little bird. When we cover him over at night he will pull the cover in all round his cage with his beak, as if to keep himself warm, and it is a bother in the morning to uncover him. He is a great biter, and gets very cross if you take him out of his cage. When you speak to him he will nod his little head and chirp in reply, as if he understood what you said.—PHYLLIS YALDWYN (aged 10), Chiswick, W.

MICE

IN THE BIRD ROOM.

Rats, Mice, Field Mice, &c.,

EXTERMINATED BY DANYSZ VIRUS

Discovered and Prepared by Dr. DANYSZ of the Pasteur Institute, Paris.

When affected with the Virus the Vermin leave their usual haunts and die in the open. The remedy is harmless to other animals and human beings and may be used everywhere with absolute safety.

For MICE only, 1/- per tube.

HOW TO MAKE AN ALL-WIRE BREEDING CAGE?

SIR,—Could any of your readers give me particulars how to make an all-wire breeding cage, with wooden frame?—PARTICK.

BORDERS VERSUS COLOUR.

SIR,—I have read with interest the letters which have appeared on the above subject. I think that one of the great points in favour of the Border Canary is natural colour, and I was delighted to read in the article by Mr. Jas. Mackie that the members of the Border Fancy Club were so strong against colour feed. I hope sincerely that natural colour will be adhered to in this variety, and should like to see more of it in all varieties.—H.B.

AVIARIES FOR PUBLIC PARKS.

Information Wanted.

SIR,—If you would kindly allow me a little space in your valuable publication to try and gather some information to put forth as an argument in favour of getting an aviary established in the Oldham Park, I should be much obliged. A postcard, giving a few particulars from fanciers of other towns or cities where they have aviaries in their public parks, will be highly appreciated if sent to the address below.—A. ACKROYD, 52, Eric Street, Oldham.

BREEDING CHAFFINCH-BRAMBLE-FINCH HYBRIDS.

SIR,—From memory (I have no notes), I can give Mr. T. H. Kinch a few items concerning the first Bramblefinch and Chaffinch Mules I saw. I believe it was in 1872 that they were exhibited at the Crystal Palace Show by Mr. T. J. Monk, of Lewes, in whose aviary they were bred. They were bred by accident and not intentionally. It was a very large aviary, the largest I have ever seen, and contained many insectivorous birds, which were daily provided with ants' eggs, hard boiled egg, etc., and seeds, of which all the birds could partake. The young Mules took mostly after the Bramblefinch (the male parent), and were solely fed by the Chaffinch. The following year a young male Hybrid paired with his own mother, and young were hatched, but not reared. In this same aviary young were bred between the Grey and Pied Wagtails. I have never seen the egg of a Bramblefinch, but Chaffinches have often laid in my aviary.—J. H. VERRALL.

THE KEYSTONE OF THE C.B.U.

SIR,—The correspondence by G. W. MacPartling, under above heading, is, indeed, very interesting. I wonder if it is all fair and bearing on rule 17? You talk of other writers showing spite and jealousy, and yet, Mr. McP., you seem to have fallen into the same error. You say Gateshead have followed the bad example of one of the Southern clubs, as the result of the recent explosion and through being misled, and that there are some of the finest men in the North in that Society. Well, Mr. McP., that is a concession on your part, to say there are some fine men in the Society; but I trust your praise is real, and not used to gloss over your statement against the misleaders. Now, seeing you are not a member of the Gateshead Society your statement as to being misled is either mere guesswork or hearsay. We want justice, quality, and a high moral standard in the C.B.U., as you say. Don't let us stab in the dark—at the misleaders, I mean. It is all very well to talk of correspondence having little bearing on the C.B.U., but don't tune your fiddle at someone else's expense, or mix up C.B.U. affairs with laudatory expressions and condemnations such as appear in your letter. These should, as you suggest, be kept free from C.B.U. correspondence. I take it the Editors of the Fancy papers are wide enough awake to look after their own business, without any help from the C.B.U. The C.B.U. is a tribunal constituted to meet all comers, in the interests of its members—even the Fancy Press, should occasion arise. So let us have the C.B.U. on its own. The Fancy Press will cater for its own subscribers in the future as it has done in the past.—T. TAYLOR (Sec. Gateshead C.B.S.).

SIR,—It is a strange thing that after all the arguments raised against the Cage Bird Union had been answered by those two sealwarts, Mr. Lythgoe and Mr. Ramsden, before the Palace meeting, that such a decision should have been come to as to delete the restrictive portion of rule 17, which would compel all societies or sections of societies to look after their own welfare by being part of a national body having interests in common. "He that won't work, neither shall he eat," is accepted by all men as just. Now, who amongst all cage-bird fanciers is prepared to keep a lazy man, or to sympathise with one even? Yet those objectors to that portion of the rule encourage societies to take up that position. Evidently they cannot see there is a principle involved. "He did not think it right that non-unionists could come into their shows and take prizes and prize-money, when they could not go into theirs and take their prizes and prize-money" is the sum and substance of the majority of the objections. What a narrow, selfish spirit must animate such exhibitors. How many fanciers take prizes from societies of which they are not members? And how many fanciers take prizes who are not members of any society? Bird fancying is more than a hobby to-day. It is also a commercial factor in life, and subject to the same law of coercion—tho one great law that governs life and action. Did not Mr. Armstrong admit to Mr. Drake that even the Yorkshire Union used coercion by not providing classes for novices (who are considered the backbone of the Fancy), as it "helps to strengthen the societies by compelling them to become members if they want to show as novices"; also that each society is compelled to "hold its show on the date required by the Yorkshire Union." If those fanciers with such fertile brains for hatching schemes would uphold the Cage Bird Union and address their inspirations to that body, they might rest assured they would get every encouragement and consideration if such contained anything unthought of or over-looked. Enthusiasm was the spirit that hailed the inception of the Cage Bird Union, with all its proposals in plain English. But somehow, after a little while, it struck terror into the minds of some of the "gods" of the day, and there was much talking and shaking of heads, accompanied by maledictions. Surely it cannot be that they are afraid of the ramifications of such a "useless body," whose "tentacles" would be fixed round every man? Honest men have nothing to fear—not even from their best friend. Must, then, the conclusion be that there are more knaves than honest men in the cage bird Fancy? Fanciers, your reputation is in the balance! Of course, there are certain shining lights flickering and sending out showers of sparks, who are afraid their luminosity will be lost in the glare of that great body which shall be as a father to all the injured fanciers of the country. Even though they have been assured their sphere of usefulness shall not be lessened, but possibly increased, they still seek the destruction of what is not a "self-raised body," but the outcome and the fulfilment of the fanciers' desire to have one common protector.—G. W. MACPARTLING.

SIR,—The members of the C.B.U. will soon be asked to voto upon rule 17, and I should like to remind fanciers that the Crystal Palace Show will have none of it. Then why should we? Why should we have foisted upon us a boycott that the leading show of the country refuses to accept? Now, fanciers, assert your rights to show when and where you like, and put rule 17 in its proper place—that is, out of the rule book. Better still, put the C.B.U. out of existence, and try and form a Board from the specialist clubs, with the object of getting our railway expenses reduced, which is, after all, the greatest evil a working man fancier has to contend with.—WM. REID.

A PERSONAL EXPLANATION.

SIR,—I was surprised to see in your last issue my name connected with an advertisement about a transaction which had never taken place, and that I know absolutely nothing about. I am not acquainted with any dealer at Clapham; neither have I ever sold a pair of Australian Finches to such a person, much less "52 pairs on one occasion," or to anyone else. The sender of this advertisement knows full well there is not a shadow of truth in such a statement; as also, in a similar advertisement a short time since, about the sale of a pair of yellow-headed Weaver Finches. Kindly insert this in your next issue.—J. B. HOUSDEN.

SOME PAISLEY BIRD ROOMS.

SIR,—Visiting Paisley last week I met Mr. A. Baird, the popular Secretary, so took a look over his stock. I was very sorry to hear from Mr. Baird he has had the misfortune to lose the best bird in his room, the buff cock he procured from Mr. McClure, which has left his good yellow hen without a mate. He has a nice buff cock mated to his young buff ticked hen. I next gave Mr. A. McDonald a call. I found him busy in the bird room. His best pair are dark yellow pie cock with buff green hen, and two pairs buff cock and clear yellow hen. I notice he has not a match for his 1st open Derby yellow pie cock. From a whisper I heard this bird may fly over the garden wall to an odd buff hen I saw in the next street. Keep your eye on Paisley. Mr. Urquhart, President Paisley and District, was my next call. He, being very busy, sent his son, who, I am pleased to say, takes a great interest in the Fancy. I noticed eight pairs up here—Clear yellow cock with nice tight ticked buff hen, a buff cock with a large yellow hen. I noticed the old buff cock and yellow hen who have bred many winners are in grand health and quite ready for the breeding season. I could not be in Paisley without giving my old friend Hart a call. I have seen Willie with a much larger stock many a time, but, as he says, good ones are not easy bought. He has a very nice yellow-green cock, 1st Paisley, mated to a hard-up buff hen, 3rd at Paisley; clear yellow hard-up cock with a fine long body and a well-set buff hen, got from Jas. Hogg, Oakley. This bird reminds me of Lawson's old strain. Next, and last, pair yellow cross cock with a buff pie hen he got from Mr. McLennan two seasons ago. Better luck, old boy, this season than last.—RAMBLER.

GERMAN PASTE: A RECIPE WANTED.

SIR,—Could any of the readers of your valuable paper inform me how to make German paste?—G. HUMPHREYS.

THE LINNET IN CAPTIVITY.

SIR,—I was much interested by the letter in last week's CAGE BIRDS entitled "The Linnet in Captivity," but while "Linnet Fancier" gives us the good qualities of the Linnet, he omits one important piece of information, and that is how to get it steady, or tame. I have found it a very nervous bird, and difficult to steady down to cage life. If "Linnet Fancier" will say how to accomplish this, and what sort of cage to use to do so, and give any other hints he thinks necessary, he will confer a favour upon the writer, and probably on many others of your readers also.—BIRD LOVER.

ALLEGED CASE OF BORROWED BIRDS AT CREWE.

SIR,—Ever since Crewe Utility Society held their open show on Nov. 21st, there has been talk about an alleged case of borrowed birds. Now, both the Secretary of the Utility Society and the late Sec. of the Ornithological Society are in full knowledge of it, and also know where it originates, and yet neither of them seem to take the trouble to inquire into it. When brought before the Secretary of the Utility Society he says it is the other Secretary's place to take it up, and the other says it is the other fellow's place to take it up first. Why not one or both of them go to see the man and get him to make his statements before them and a few witnesses? Instead of that, the Secretary of the Utility Society says he wants a written report before he can do anything; while the man says himself, if they like to go to him, he will make the same statements to them and find proof of what he has already stated. I should think this is good enough for either of them, or what good is the C.B.U. going to be if cases are going to lie dormant?—FAIRPLAY.

CAN YELLOWS BE BRED FROM TWO BUFFS?

SIR,—In answer to "J.A.," in your correspondence columns, re yellows being bred from double buffs, I say "Yes," in proof of which I send the following, which can be substantiated by Mr. Palmer, Chemist, Unthank Road, of this city (Norwich). I had a Crestbred yellow hen bred from two buffs. I sold Mr. P—— a rough Crested variegated buff cock, bred from double Crests (both buffs), and the yellow Crestbred hen I sold him at Plainhead price, because I was told that it was not possible to breed a yellow hen from two buffs, and that I must have made a mistake. But, being sure I had not made a mistake, I advised him to pair the yellow Crestbred hen with the Crested cock. He did so, and the result was five Crests in the first nest, of which two were yellows; and I only hope I may be fortunate enough to have a nest of Crests this season to equal them. I might add that I have been a breeder of Crests and Plainheads for ten years, and this is the only instance that I can vouch for. Have taken CAGE BIRDS since first it started, and I must say it is the best paper I know of and richly deserves the support of every fancier.—H. D. POTTER.

NOTES ABOUT THE BARBETS.

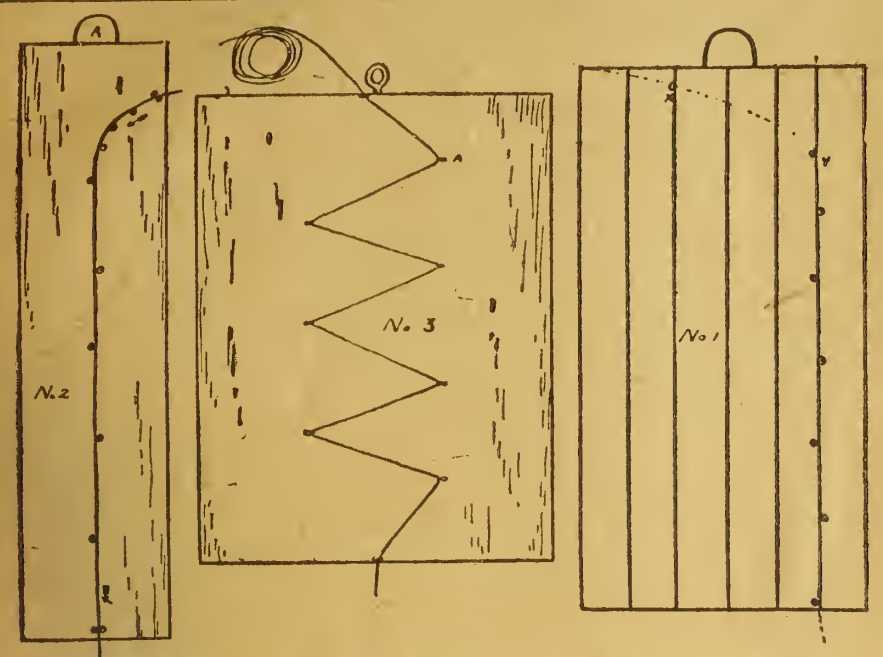
SIR,—The reason why the amateur aviarist in search of something new or uncommon has not hit upon the family of Barbets is, perhaps, in some measure due to the reputation they have of being dull and stupid birds, and being difficult to manage in captivity. This reputation has been subscribed to by an otherwise good monograph on the family, as well as several prominent works on aviculture. Notwithstanding all this, we have more than one good authority who differs materially from this opinion, and as the birds form a rather quaint and most interesting race they afford a good field for the speculative aviculturist. As they have not yet been bred in captivity, this should be but another inducement for this class of fancier to go in and win the coveted honour of being the first to successfully breed the species. The Barbets are nearly related to the Woodpeckers, and, like them, dwell almost exclusively in and among trees, keeping for the most part to the upper branches, and not often descending to the ground. They also, like their relations, nest in a hole in a tree, which they hew out for themselves with their powerful beak. As regards their natural habitat, they are very widely distributed over the tropical portions of both hemispheres, being found in Asia, Africa, and the warmer regions of America. They are heavily-built birds, with strong, stout legs and beaks, short wings, and only moderate tails. In plumage they rather affect the gorgeous type of beauty, being brilliantly coloured, and the sexes usually very similar in coloration. The young birds, however, are easily recognised by being perceptibly duller in all their colours. They are reputed to be usually unsociable and greedy and noisy creatures, but their only pretensions to song consists of sundry resonant metallic notes of the hammer and anvil type, which have doubtless helped to give the birds such local names as Ironsmith, Tinker, and Coppersmith. In diet, although they are largely fruit-eaters, they vary somewhat, according to the species and native habitat. Thus the American and African forms are more insectivorous than their Asiatic cousins. In captivity they are quite easy to cater for. Some form of egg food and fruit should form the staple diet, and to this must be added a good supply of insect food, if the birds show a preference for it, with an occasional supply of bread and milk. The latter will be found more useful when the birds obtained appear young, and for the more insectivorous Eastern species. If the birds were induced to nest, it might also prove a very valuable addition to the staple diet whilst the young were being reared. As regards the kinds of fruit to give, bananas easily hold first place, both for wholesomeness and general utility, and in being liked by the birds. Sweet apples, pears, grapes, oranges, and the like come next, and when the season comes round various berries and small garden fruits as they ripen might be substituted as a change. In disposition they are inclined to be rather quarrelsome with each other, so that if one had any desire to attempt breeding them, it goes without saying that plenty of room and cover should be provided for them, and as few companions as possible. It may be as well to point out here that although the quarrelsome temper is not usually exercised over other species, it is best not to trust them with smaller and weaker birds. Being large and powerful birds themselves, and well able to take care of themselves, they are better fitted to associate with birds of a similar nature. Parrakeets, Pigeons, the larger Doves, Jays, and members of the Crow tribe are what may be most safely associated with them, with, perhaps, the exception of the species known as the Tinkers and the Coppersmith, which are much smaller in size than the species commonly found in the market, and should have proportionately less powerful comrades.—BARBER.

WHY ARE SHOWS FAILURES?

"Even the Worm Will Turn."

SIR,—Every now and again there appears in your Correspondence columns a letter headed "Why Shows are Failures"; then follows a graphic description of birds having been left on some wayside station platform or in some cloak room. The poor Secretary and Committee of the particular show to which these exhibits have been generally comes in for a good deal of blame; thus they point out why shows are failures. All exhibitors, all secretaries, and all committees much deplore these delays and annoyances, and in many cases it is the fault of the exhibitors themselves. A case to illustrate my meaning. The Secretary of a certain society was, the day after the show, congratulating himself on the manner in which everything had gone off, and the way in which the birds had been despatched, when up comes the telegraph boy. Telegram reads, "Where's my birds?" This knocks the bounce out of the Secretary. Turning up the entry form, he finds the words, "Send the birds back by the 4.50." Well, something must be done. Off he goes to the steward who packed these particular birds. "Did he remember them?" "Yes, quite well; gave them to Jenkins, who was going past the station." The Secretary and Steward then went to the station, found entry for the birds, entered as "received at 4.40, sent by the 4.50 train." "Well, where are they? They have not arrived." Receiving clerk simply utters the word "Bosh!" But this won't do, so he promises to ring up along the line and make inquiries. Now, there are two stations at the town to which these birds were sent, and they were quietly lying at the other station, tho exhibitor having only made inquiries at one. No doubt they should have arrived at this station, but it would have been wiso to make enquiries at the other when he could obtain no news at the first one twenty-four hours after they should have arrived. I might say the birds were despatched by the same route as they arrived at the show. Now, cannot some of these gentlemen point out some ways and means of making an open show pay? I confess I cannot. I am like Rosa Dartle—I "want to know." Now is the time for committees to begin thinking. Shows are not the work of a week or two only. They are a source of considerable thought for the greater part of the year. You hear a lot of talk about "better classification." Can anyone give us an ideal schedule? Nearly all shows give a different classification. Of course, societies in different parts of the country must vary their schedules according to local requirements, but what I want to know is what classification would suit generally? Local requirements could be fitted in afterwards. I have had members of our own society say to me, "Our show will never pay on its present schedule." In answer, I have placed a schedule in their hands and said, "Improve it." "Oh," is the reply: "it wants thinking out." But they never think it out. It is left in the hands of the committee. When the schedule comes out some of them say, "Such and such class will never fill; we should have dropped them, and given so and so a chance." Now, why cannot they air their views before the thing is settled and in print? And echo answers "Why?" Would it not be possible to have a county competition, with a decent prize for each county, the winners of each county to compete for a special prize—say at Crystal Palace Show? Of course, I see objections: there are so many varieties. But say we take the most popular breeds. Surely the societies of each county could put up prizes for the most popular varieties in its own particular county, the competition to be held at different shows each year? The Crystal Palace Show authorities would know in good time how many entries there were likely to be, and how many varieties would compete, for them to decide how to give and where to obtain special prizes. We might then get to know which were the champion birds of the year. What I want to know is, "How to make shows pay?" Can anyone answer it for ONE WHO WANTS TO KNOW?

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else. Sold in tins, 3d., 6d., and 1s each.



Mr. F. J. Rook's. Mr. W. Stagg's. Mr. J. Wallace's.

Three Methods of Straightening Cage Wire.

METHODS OF STRAIGHTENING CAGE WIRE.

SIR,—I send you a sketch of a method which I have used for many years with success. Cut a piece of oak or teak, 15 in. by 6 in. by 1 in. thick; now cut a 17-in. length of wire from each of the pieces of different thickness to be straightened, and sharpen the ends. After getting the wires fairly straight by hammering on a wooden block, with the pliers bend them at right angles, ½ in. from each end; repeat this ½ in. from the first bend. The points are then driven into the ends of the wood, one of them in a slanting direction. Stretch fairly tightly across the wood at convenient interval (see sketch); these form the guide wires. Five nails (shown as dots) are now driven into the board, touching each guide wire; of course, all the guide wires are treated alike, each one being a straightener in itself for wire of its own thickness. The nails used must be at least 2 in. long and easy to bend, and are driven about ½ in. into the wood and then bent in alternate directions to lean slightly over the wires. The angle at which these nails bend is the most important part of the contrivance, for they must be bent to and fro until the wire comes out fairly straight. A staple is driven in at x and y, the one at y being driven fairly deep, and being left just high enough to let the wires pass under it and over the guide wires, whilst the other is only driven in a short way, the idea being simply to keep the wires in position. A dotted line shows the course the wires take when being straightened. A staple fixed in one end, as shown, and placed on a nail or screw in the bench, will hold the block in position whilst the wire is pulled through with a pair of pliers. If it cannot be got quite straight, it can be finished off by hammering on a block of wood, but this will not be needed if the straightener works properly.—JAMES WALLACE.

SIR,—Get a piece of wood about 18 in. long and 3 in. square; ash or pitch pine is best. Now take a piece of the wire and get it as straight as you can, then bend it round a little at the top as shown. Place it on the block and drive in some 2-in. wire nails, as shown in sketch; drive them in the wood about 1 in. or so, and close to the wire; then take the piece of wire out and place that to be made straight in the block, and pull through with pliers. If it bends to the right, tap some of the nails to the left, and if to the left, tap them to the right; this controls the straightening of the wire. With a little practice you can get the wire as straight as a professional man. You should use round 2 in. nails, not flat ones. I always use a file to cut my wire into lengths, as you do not twist it about so much as when pliers are used to break it off. The wire must be fairly hard to pull out, or it won't come straight. A is a staple by which the block is held while drawing the wire through.—FRED J. ROOK.

SIR,—I am sending you an illustration of a wire straightener, for the benefit of all readers. It is very simple. Get a piece of hard wood, 16 in. long and about 9 or 10 in. wide and 1 in. thick; draw two straight lines down centre about 3 in. apart, and drive in wire staples at equal distances apart along each line; put one at each end in the centre of the two lines. Thread the wire through staples and draw on samo. A is the staple.—W. STAGG.

[We have also to thank Messrs. H. Reeves (Rugby), W. Fleming (Sheffield), and a correspondent who omitted his name, for sending sketches of wire straighteners on similar lines to those figured above.—EDITOR.]

5s. M'thly. SENT ON APPROVAL. FREE on Rails Norwich. Send no deposit. Special Offer. A high grade Cycle for cash, £4 10s. Victory's, Swift's, Singer's, Premier's, Centaur's, Triumph's, Rudge-Whitworth's, Humber's, etc., £2 10s. to £8 19s. and from 6s. monthly. Write for terms. Derehamroad Cycle Co., Norwich.

THE SQUARE-FEATHER CONTROVERSY.

A Startling Admission: No Square-ended Feathers Here.

SIR,—With reference to the square feather controversy now going on in your valuable paper, as a member of the G.C.A. perhaps you will allow me to give my views on the subject. I have for the last seven or eight years bred a few Greens each year, and shown a few with a fair amount of success. Now, the "square feathers" were first pointed out to me at one of our local shows, when one of our members got disqualified for the said square feathers. I believe Mr. A. Wellings was the judge. As I was at that time on the committee, I, together with other members of the committee, took the bird into the private room, and there, with a strip of white paper, examined the feathers. I believe it was then the opinion of all present that the bird had ends to its feathers which were not natural. Now, Mr. Editor, since that time I have carefully examined every bird I have bred, and can honestly say I have never come across a square feather yet.—W. DUGMORE.

SIR,—I find in my observations in the breeding room that most birds—Canaries in particular—when breaking into moult are liable to scurvy. The cause, in my opinion, is that all the poison from rich food flies to the weakest place, which is the surface, causing the bird to peck and nibble at the new pen feathers, which causes them to appear as though they were cut with a pair of nail scissors. At the first few shows we hear nothing about them, but when the feather is full grown it is more distinct, and in green birds more than any others. I find prevention is better than cure, therefore I cleanse and cool the system previous to the birds breaking into moult.—P. HAYDEN.

AGE OF BREEDING CANARIES.

SIR,—I have two cock Canaries. One I have had nine years this coming May, the other four years; I don't know how old he was when I bought him. I bought some 1906 hens and chanced my luck by putting the old birds up with two of them. I am pleased to say I have four young in each nest, one egg in each nest being clear. I have never attempted breeding before. The old birds have had nothing but Hyde's mixed seeds and a bit of apple since I have had them till I started taking your book, which was the Christmas number, and that seemed to get a fair hold on me. I would like to know if it is not a great age for birds to breed?—G. WING.

THE CRESTED CANARY CLUB AND THE C.B.U.

SIR,—Having been requested by Messrs. W. E. Greeves and H. Mills to receive letters from members of the C.C.C. desiring an extraordinary General Meeting for the purpose of rescinding the resolution carried at the Annual General Meeting on February 16th, by 10 votes to eight, "that the C.C.C. do become affiliated to the Cage Bird Union." I have consented to do so in an entirely unofficial capacity, and beg to say that, according to rule, I have now the requisite number in hand—viz., one-fourth of the membership. Consequently, an Extraordinary General Meeting will be duly convened by the Chairman. The following is a list of those who desire the meeting, namely:—Messrs. W. E. Greeves, W. Glasscock, J. Broad, J. Evans, A. E. Brooks, C. L. Quinton, W. and T. H. Evins, W. M. Gaze, W. J. Hill, J. W. Towers, C. T. Hoar, W. H. Eley, F. J. Mason, F. Mason, H. Mills, J. Forman, J. Tottle, J. Mennott, W. J. Crookes, T. Gale, E. Piper, T. G. Bale, Rev. G. W. Joyce, Mrs. Crow, J. T. Miles, E. Jones, T. Bond, E. Bloomfield, C. J. Willis, J. Turner, B. Stevenson, and J. W. Compton. From the general tone of the letters in hand it appears to be the desire to rescind the resolution, so that the whole membership may be approached and asked to vote upon such an important question.—JOHN TYSON.

LLANELLY P.P. AND C.B.S. AND THE C.B.U.

SIR,—Kindly allow me to state that as one of this district's Committee, I strongly opposed any action being taken in connection with the above Society, which, in my opinion, was in no way to blame, the fault lying with the exhibitors themselves. I was not aware, until I read the report in your paper that the matter was going to be brought forward at the Union meeting, at the Crystal Palace.—W SAMPSON (Cardiff C.B.U. Delegate).

THE EARLY BIRDS.

SIR,—Having seen a reference to early Mule breeding, where Frank Goulding says that he had the first egg on January 20th, I am pleased to inform you that I had two Mules hatched on January 21st out of five eggs, from Goldfinch and Canary, and have also two more Mules hatched to-day (February 7th) from same pair. The first two are doing well and are very strong. I also had eight eggs from a pair of Canaries, and six were hatched on January 31st, but one died. I have five strong and healthy, and the hen is now sitting on seven more eggs, which should come off March 16th.—C. WRIGHT.

SIR,—It may interest readers to know that on Monday, March 4th, when walking through a wood about five miles from Ayr, I came across a Blackbird's nest with the hen sitting close on four eggs. Since then I have seen indications of the eggs being hatched, but the coldness of the weather forbade me disturbing the hen, in case any harm should come to the "poor young mites." Is not this very early for this part of the country, considering the severe weather we have been experiencing?—A. WAITT.

BRITISH BIRDS AT THE PALACE SHOW.

Sir,—Please pity the poor Nutcracker, Mr. Birchley! Perhaps he was not "made in Germany." Who knows? Shall we not at least give him the credit of being "*Yucifraga Caryocatactes?*" And if he is, he won't be the only "British born and bred" Nutcracker at present residing in England.—H. R. DAVISON.

Sir,—Mr. Birchley appears to think that his Great Grey Shrike should have been awarded the Cup for best British, and also the special for the rarest ditto. Now I, for one, consider that his bird received all it merited. The Nutcracker has visited these isles occasionally, and therefore has as much right to be ranked a Britisher as some of the Meadow Buntings, Waxwings, etc., which are shown in British Bird Classes at the present time. The Nutcracker was fully entitled to the special for the rarest British bird. In the case of the Cup for best British, how does he know that his Shrike is a good specimen of the species or not? There was no other shown with which it could be compared. In the case of the Tree Creeper which was awarded the Cup, it was different; it was acknowledged to be the best of several good specimens staged, therefore the judge was quite justified in awarding the Cup to the Tree Creeper. Mr. Birchley says that he had beaten the winner with his own, previously, under the same judge. Does it not occur to him that the judge may have made a mistake on the other occasion, and took this opportunity of rectifying it? Mr. B. also says how much more trouble it is to rear and steady the Shrike; is this not the well known specimen shown by Mr. Howe last season? If so, someone else has had this trouble, not Mr. B. I don't say the Tree Creeper should have had the Cup, but it had better claims to it than the Shrike. I consider that in awarding a cup or special for best birds, due regard should be given to the monetary value of the birds competing for the same (not forgetting condition), and surely the most valuable bird in the show is the best if in condition? I don't think it fair to award specials for best bird in tho show to a British bird worth about two or three pounds, when there are Canaries, Mules, and Foreigners staged, that are worth two or three times that amount. This has been done on several occasions during the past show season.—J.P.S.

SIR,—The letters of Messrs. Cocks, Woodhouse, and Wm. Cook (the exhibitor), putting forward the specimen of the Nutcracker exhibited by the latter gentleman at the late Palace Show as a British specimen, are decidedly amusing. I quite agree with Mr. W. Cook in his remark that "Mr. Birchley will be surprised to hear that his Nutcracker was caught in Scotland." Mr. Woodhouse says he noticed the bird in question was entered in the "Migratory Class." I should like to ask Mr. Cook if it is not the fact that his specimen was part of a consignment of six that migrated in Continental cages from the Tyrol, and first touched England in the East End of London not far from Shoreditch? I had it on good authority, viz., from a gentleman whose initials are "W.F.," that he bought the consignment of six, and sold the bird exhibited to its then owner. Does this touch the spot, Mr. Cook? Mr. Cocks can have had very little acquaintance with Great Grey Shrikes, or he would have a very different opinion of their value and the difficulty in steadying them. I happen to have the specimen he refers to as being purchased for a few shillings at Club Row, having purchased it from the party who bought it from the shop. But up to now it has cost close upon 1s. 6d. a week for live food, etc., and I calculate it will cost a considerable sum for food before ever I shall be able to exhibit it, to say nothing of the difficulty of taming such a bird. At present it has the use of a large outdoor aviary, where it is about as wild as it is possible for a bird to be. I think there is very great credit due to Mr. Birchley, or the previous owner of the bird he exhibited, for the patience they, or one of them, must have spent in getting it to its present condition. When Mr. Birchley says he "reared" it, I am inclined to think he should have used the words, "meated off." On point of rarity, I think the two rarest British birds at the last show were the Lapland Bunting, exhibited by Mr. McVittie, and the Great Grey Shrike, both being on a par, in my opinion, in point of rarity. But, on the whole, I think the Shrike should have had the award on the ground of the difficulty of keeping and its condition, and I should not look upon Mr. Birchley's letter as the wail of a disappointed exhibitor, as your correspondents seem to suggest, but consider he has a just cause for complaint. If the judge had sufficient doubt to pass the Nutcracker in its class, he should have passed it as not being a British bird, and I am quite sure that my opinion would have been sustained by most fanciers who know anything about the Nutcracker. I am entirely disinterested, not knowing either party, and should not have troubled you with a letter but for Mr. W. Cook's assertion that his bird is a British specimen. I very much like to see a rare British bird, but I don't believe in Nutcrackers any more than Meadow Buntings, which appear plentiful just now.—S. A. SANDY.

[One or two lines of Mr. Sandy's letter have been deleted. They refer to the judge, Mr. S. Cook. We would point out to correspondents that it has three times been stated in CAGE BIRDS that while Mr. S. Cook judged the Nutcracker in its class, and left it unnoticed, the other two British bird judges had a voice in the awarding of the specials.—EDITOR.]

AN AMATEUR'S EXPERIENCES.

SIR,—Being a constant reader now of CAGE BIRDS, and a mere amateur in bird keeping and breeding, I take leave to write you. I commenced with one pair late in 1905; hen Canary and Linnet; result, three Mules. In 1906 I tried my hand again. I bought a Norwich cock and hen, but only reared one young; hen turned out too close a sitter. In addition, I reared six Linnet Mules, and last nest of the season, four Canaries—three cocks and one hen. So my stock is a little larger for this year. I am contemplating big guns this season; I shall be able to mate about seven pairs for Mules and Canaries. I have a nest of Canaries now, doing well, hatched on February 28th by the same hen. I had my three cocks and one hen last year; I keep them in the kitchen. The hen is a splendid feeder, I am pleased to say. I appreciate your splendid paper, CAGE BIRDS, greatly; I generally find in it the very questions I would like to ask answered for me. —T. BROUGH.

ALLEGED REFUSAL OF MEMBERSHIP THROUGH ASKING FOR PRIZE MONEY.

SIR,—I am writing respecting our Bath and District F.A. Young Bird Show, held September, 1906. I exhibited 10 cage birds and won four 1sts, two 2nds, two 3rds, two vhc's, gold medal for best Canary, also special for best Norwich in show. On receiving prize-money I found it was 3s. deficient, and, knowing the show to be a success, and the society having a really good balance in bank, I asked for the balance of my prize-money, which the Secretary withheld against the society rules. Then I received a letter from Mr. Turtle, Sec., refusing to pay, and asking me to send in my resignation, as in any case I should not be re-elected. For what reason I do not know. Probably the Sec. could furnish me with the correct reason through your valuable paper, CAGE BIRDS. Since the above show, some so-called "brother fancier," and a member of the above society, has rumoured that the birds I exhibited (as above) were borrowed. I am prepared to challenge this "no doubt disappointed exhibitor," for £50 aside, for him to prove his statement. —G. E. LANHAM.

P.S.—I may inform you that the above gold-medal winner for the best Canary in show is in my possession to-day.—G. E. L.

NOW READY!

AN ENTIRELY NEW SERIES OF

COLOURED POSTCARDS OF HYBRIDS.

On this Series the following are . . . . beautifully portrayed by Mr. H. Norman :—

(1) Jonque Four-pointed Goldfinch-Canary.
(2) Goldfinch-Bullfinch.
(3) Goldfinch-Redpoll.
(4) Greenfinch-Bullfinch.
(5) Linnet-Bullfinch.
(6) Jonque Dark Goldfinch-Canary.

Price 1d. each.

Post free 7d. the Set.

On Order from any Newsagent, or from

"Cage Birds," 154, FLEET STREET LONDON, E.C.

A CONUNDRUM OF THE PALACE SHOW.

SIR,—I thought "Querist" would have been convinced after reading Mr. Osborne's letter that the Redpoll 2nd at the Palace Show was not colour fed. He seems very hard at belief. I beg to say that the Redpoll has never been in my possession. I believe I am right in saying it was caught by its owner quite seven years ago. As I am not a British bird exhibitor, I cannot give your readers the article "Querist" would like. My reason for answering his first letter was because I thought "Querist's" remarks might discourage a promising fancier, and a member of the society I have the honour to represent as Secretary; further, to try and prove that the Redpoll was worthy the place he held, without the aid of colour feed. I am sorry if I am wrong in thinking "Querist" a disappointed exhibitor.—F. HOWES.

[This matter is now closed.—ED.]

A TAME HAWK.

SIR,—Seeing in your paper some notes about Hawks, I thought I would send a few about mine, which I have had about eight months. It was caught at Rotherham one day when I was catching Linnets. The first week I got him I thought I should have to let him go, on account of being so wild. But I have managed to get him so tame that I can now let him loose, and he flies where he likes Even when the house door is open he will not offer to go out. I can take him on my finger without any fear of him striking me. I feed on raw meat and raw liver, and sometimes give a live Sparrow or Starling, which he will kill and eat in quick time. It is very interesting to watch hm kill a bird. First of all I let the bird fly loose; the Hawk sees him, and goes after him, strikes at him with his claws, and then flys back to his perch, which is a piece of wood knocked in the wall (no cage). He then gets the Sparrow round the neck and strangles it, and starts to feather it, which he does in quick time, and then puts it out of sight. When he has not had anything to eat for a day he will fly on the back of my armchair, as much as to ask for something. I have not seen him drink yet; in my opinion the moist flesh he eats quenches his thirst. My Hawk has been attacked by two cats, but he has freed himself by the aid of his strong claws, which, it seems, pussy does not like. The Hawk is a very interesting bird, especially as a house pet. Mine is a Kestrel Hawk. I once caught a Merlin Hawk, which I kept a month, but had to let him go as he was so wild and vicious. My wife recently caught a Blackbird with a pure white head, which is very tame and going on well.—H. PALFREY.

INHUMAN BIRD-CATCHING IN CORNWALL.

SIR,—I have read the correspondence which has appeared in your valuable paper, CAGE BIRDS, on the above subject. I think it is not the action of the genuine bird-catcher, it being quite out of his occupation and purpose. I certainly do not agree with such cruel methods of capturing birds; it is not sport. Your correspondent, Mr. Patterson, says something should be done to protect birds from this cruelty: well, there is already a law in force which deals with it, and the offenders only require detecting by the authorities and the result would satisfy. What about the thousands of Larks that are slaughtered annually for table purposes? These are not consumed by the working class or there would soon be a stop put to it. As a British bird fancier I am very grieved indeed to hear of such cruel and inhuman treatment of birds; it is such conduct as this that gets the genuine and humane birdcatcher into disgrace, and causes stricter measures to be passed by our County Councils. I have oft-times wondered why the ancient sport of bird-catching should alone be attacked; what about the various kinds of game that escape wounded by shot from the gun of the sportsman whilst having his sport, practically shooting hand-reared pheasants. These are often left to suffer a cruel death in the ditch. Surely this is level with the above. Then, again, because some birds have good singing qualities it should not be an excuse for special preservation, as the damage they do to crops is enormous, and they, like Sparrows, should be kept within reasonable bounds. It is clear it is not the bird that protection is sought for, but their song, or what about the poor unprotected Sparrow, that has no song, their destruction being encouraged by clubs, etc.? It seems to me that, whether inhuman or otherwise, sentimentalists are opposed to bird-catching. Are there not other cruel sports that should be taken in hand? But, of course, it is only the sport of the working man that is attacked, no matter what little pastime, in the shape of sport, he might seek.—P. DILCOCK.

"CAGE BIRDS ANNUAL"
is invaluable to beginners in the Fancy.

The Square Feather Controversy.

AN INTERESTING MEETING.

Mr. J. W. Ramsden and the Liverpool breeders of Green Canaries thresh out the question of square-ended feathers.

A special meeting was held at Liverpool on March 6th, in the Oldham Hall, with Mr. Metcalfe in the chair, to hear Mr. Ramsden's explanation of the Palace disqualifications, also to examine the disputed feathers. There was a very large attendance. The Chairman said he hoped members would listen carefully to Mr. Ramsden, as this question was of vital interest, no one knowing in the present state of affairs when his turn might come to be disqualified, and it was generally the most innocent who suffered.

Mr. Ramsden passed round photographs of the feathers taken at the Palace, and stated that the feathers were photographed whilst on the bird. Mr. Ramsden wished the members to understand that the birds had not been disqualified for square feathers, as square feathers had been recognised as being a natural growth. The feathers in dispute were of a jagged nature, showing every appearance of having been cut or trimmed. Mr. Heath, on finding these feathers, called two fellow-judges, Messrs. Robson and Mundell, who both endorsed his opinion that the feathers had been trimmed. The feathers were afterwards photographed and the photographs enlarged. The photographers (Messrs. Russell) were of the opinion that the feathers had been cut. Mr. Ramsden also quoted several high London and Liverpool authorities, and they were of opinion that the feathers had been tampered with. Mr. Ramsden went on to state that after procuring these opinions, his committee considered the matter. Mr. Fisher represented the owners of the bird and the G.C.A. The committee, after careful consideration, came to the conclusion that they could not do anything else than uphold the decision of the judge.

Mr. Fisher suggested the advisability of consulting the Liverpool authorities and the G.C.A., which was agreed to, and they had upheld the opinion of their London brethren.

A member suggested that the authorities quoted were not breeders, though they might be scientifically informed as to the plumage of birds.

Mr. Ramsden said, on the evidence of the authorities, the L. and P.O.S. must uphold the judge's decision, but would only be too glad if it could be proved that the feathers were natural.

Mr. Dixon: Have any of the authorities ever bred Green birds?—Mr. Ramsden said he did not know, but they examined many skins of birds, but they could not find any similar feathers.

Mr. Hadwin: Will the L. and P.O.S. reconsider their decision if anything we can show them to-night has a fresh bearing on the matter?—Mr. Ramsden: Yes.

Mr. Wardale: Was there ever a bird disqualified at the Palace before?—Mr. Ramsden: There was a disqualified Green at the Palace some time ago. I came to Liverpool and saw the exhibitor, who admitted that some of the birds were trimmed, though not the one disqualified.

Mr. Cutmore (Chief Taxidermist at the Liverpool Museum), who attended as a private fancier, showed a diagram of a feather, and explained that the ends of the feathers were not naturally grown, but might have been nibbled by the bird itself or by other birds. In his (Mr. Cutmore's) opinion, the beak of a bird was quite sharp enough to perform this operation.

Mr. Doughty: Why should these feathers be cut, as they come from a foul bird, and there could be no object in cutting them?—Mr. Hadwin: The question of motive is a very serious one, and should be kept well to the front. In these cases there was an entire absence of motive—in fact, trimming these feathers was very detrimental to the birds, as it spoilt the continuity of the pencillings.

Mr. Bretherton: Was there one or more disputed feathers in Mr. Clayton's bird?—Mr. Ramsden: Several.

Mr. Bretherton: Had the authorities wild or domestic birds in consideration when giving their opinion?—Mr. Ramsden: Quite a number of all sorts were examined.

Mr. Deacon: Mr. Ramsden gave us the impression at the Palace that Mr. Stewart's bird was disqualified for one feather only.—Mr. Ramsden: I did not intend to convey the impression of one feather, but referred to one feather in particular when speaking to Mr. Stewart.

Mr. Bretherton: Why were not other birds disqualified that had jagged feathers?—Mr. Ramsden: I really do not know.

Mr. Young: Did your committee know that there were other square-feathered birds in the money?—Mr. Ramsden: Other birds were not taken into consideration at all.

Mr. Deacon: Many of the birds judged at Liverpool and at the Palace have square feathers. Why was Mr. Mundell taken into consultation after he had disqualified birds at Liverpool?—Mr. Ramsden: I did not ask Mr. Mundell for his opinion. Mr. Heath asked him. I have the greatest confidence in Mr. Mundell, and he was one of your own judges. Mr. Heath assured me afterwards that he did not know Mr. Mundell had disqualified any Greens at Liverpool when he asked his opinion.

Mr. Hadwin explained why the judges were changed at the Palace.

Mr. Clayton: Why did not the Palace Committee go the full length and penalise the exhibitors, not simply uphold the decision of the judges?—Mr. Ramsden: The birds were rightly disqualified if the birds cut the feathers themselves; the feathers were cut, no matter how. The Palace authorities gave the exhibitors the benefit of the doubt of criminal responsibility.

Mr. Hadwin: I think the L. and P.O.S. should not have disqualified, unless they were perfectly certain that the exhibitor had done this thing, or someone acting on his behalf. Birds cannot fake, and we had the authority of Mr. Cutmore that it was quite possible for the birds themselves to have done this trimming.—Mr. Ramsden: Am I to understand from Mr. Hadwin's remarks that it must be absolutely proved that the exhibitor had trimmed his bird? According to C.B.U. rules, it was sufficient if a bird was shown with damaged feathers.

Mr. Hadwin: If it can be shown that the feathers could be damaged in any other way than by the exhibitor, no disqualification should stand, especially taking into consideration the character of the exhibitor.—Mr. Ramsden: Mr. Stewart had already had a bird disqualified.

Mr. Hadwin: Mr. Stewart's bird was shown at Liverpool by Mr. Wardale, and disqualified for square feathers. After the Liverpool Show the G.C.A. decided that square feathers were a natural defect, and should not carry disqualification. On the G.C.A.'s decision Mr. Stewart was quite justified in showing the bird at the Palace.

Mr. A. Thompson: Could not the L. and P.O.S. have examined some of the clear Yorkshires to see if these jagged feathers existed amongst them?—Mr. Fielding: I have had good birds spoilt in the moult, and have had good Lizards ruined in spangling by other birds plucking them.—Mr. Hadwin: In my opinion, if the L. and P.O.S. Committee will take a London breeders' room haphazard, and take a bird haphazard out of this room and examine the feathers, they will find some of the feathers jagged, which ought to prove that the feathers have not been cut by the hand of man.

Mr. Clayton: Why did not Helliwell's feathers convince the Committee that the feathers were not cut?—Mr. Ramsden: All experts agree that the feathers were cut.

Mr. Metcalfe: Could not some of the Committee examine their own birds for these feathers, and then meet the authorities?—Mr. Hales: I had a visit from a gentleman on Sunday morning, who asked if I had any square feathers. I told him I did not know I had, but we examined about 20 birds, of six different varieties, and found on every bird square and jagged feathers, these birds being both show and purely stock birds.

Mr. Hadwin: Did your Committee take into consideration the question of motive? Why should these feathers be cut? Mr. Ramsden: Yes; and it was shown that these feathers were sometimes clear or bronzed.

In reply to several queries, Mr. Ramsden stated that he would ask his Committee to examine other birds, and he would see that he was one of the examiners; and if they found that these blemishes were naturally acquired, he would ask his Committee to reconsider their decision. Hearty votes of thanks were accorded Messrs. Ramsden and Cutmore, and a unanimous vote of confidence in Messrs. Clayton and Stewart was passed, Mr. Clayton being very much moved by the confidence of his fellow-members.

The most serviceable, striking, yet tasteful and economical

LIVE BIRD LABELS

are those obtainable from "Cage Birds."

For the convenience of readers we have had printed a quantity of address labels suitable for use when despatching live birds on journeys by rail, etc. These are printed in red ink, on paper gummed at back, and

STRAY NOTES ABOUT BIRDS.

By CLAUDE ST. JOHN.

Barely Clad Foreigners.

This is another very common experience for the bird keeper just now. A goodly number of smaller kinds of foreign birds appear very bare, especially when kept in cold or crowded rooms or aviaries. In newly imported birds the cause is obviously due to their rough and tumble sort of existence during importation, but in acclimatised birds it is almost invariably due to one of two causes, viz., cold causing the feathers to drop out and preventing the growth of new ones, and being plucked by their companions, or losing them in mimic warfare. In both cases the lack of sufficient warmth to reproduce new feathers is the indirect cause of the bird remaining bare. Removal to a higher temperature will always remedy this defect, and, without any treatment at all, the bird will gradually put on full dress as the normal temperature rises in spring, and the bird will be seen to improve in the order of their hardihood, so to speak. The Waxbills are among the most susceptible to this effect of cold and are generally the last to become quite fine in feather, as they are also usually the most bare during the colder months.

Do Birds' Beaks Grow?

This is a question that is involved in the lately reported cases of a strange epidemic in which the beaks of the affected birds rotted off. Of course my former suggestion of a cancerous disease is quite out of court now, as we hear the beaks are now growing again. As more than one case has been reported we must accept the good faith of the unfortunate owners. Still it is a pity this strange complaint was not more closely investigated. Could the owners be mistaken in thinking the mandible dropped off? It is easy to make a mistake of that kind without examining the thing closely. The general concensus of opinion is that when a beak is lost it does not grow again. I know myself from practical experience that a claw that is lost, or cut off close up to the toe, as it is popularly called (I am writing in very unscientific terms), is either not reproduced at all, or only in old age, after the lapse of years after the loss, and as the beak and the claws are very analogous one would naturally expect to find the same phenomena in reproduction of a lost or broken mandible.

Insect Food for Finches.

Many readers will doubtless wonder at the heading of this note. The belief that our native Finches are almost or purely grain-eaters is so general that the idea of offering them anything in the nature of insect food never occurs to them. As a matter of fact, I do not believe a single species can be proved to be purely insectivorous, and one cannot fail to appreciate the beneficial result upon the general health and condition of caged Finches of a little insect food, even after a very limited trial. Linnets and Redpolls simply revel in a supply of small sprays of plant, which are infested with green aphides. Redpolls will even go so far as to feast upon red mites if placed in a cage that is infected with this pest. Goldfinches are equally greedy for the maggots which often inhabit the base of the seed heads of such plants as teazle and thistle, and the maggot or caterpillar that attacks our garden roses, and causes so much loss of early bloom is equally acceptable. Even small pupæ are not rejected, and when all these natural items fail, I have yet to discover the Finch that will not devour with evident gusto a mealworm fastened on the end of a perch. But some discretion must be used in giving the latter, as they are highly stimulating.

When to Give Mealworms.

When considering only our native Finches, there is certainly a time to give these larvæ, and a time to withhold them. Their stimulating properties preclude their use at this season for birds in a very forward condition, unless, indeed, one has the hen Canaries equally forward, and intends to pair up very soon. (This, by the way, is an intention I would neither encourage nor advise.) But when a Finch is already in a forward condition, perhaps rather earlier than one desires, the effect of giving mealworms would be such that the bird must be mated at once, or it will run a risk of being spoilt for breeding for the rest of the season. On the other hand, the effect on birds that are backward and keep out of condition, often acts like a charm. The supply must be strictly limited—one each day so long as a bird is out of condition should suffice now—and as soon as it begins to come nicely in song, the supply may be reduced to two or three per week, according to the bird's condition, and the time it is wanted for mating up. When nearer the proper time for mating, of course, a more liberal supply might be given to bring about quicker results.

Order your "ANNUAL" Now.

The Cinnamon-Marked Yorkshire Canary.

Lecture by Mr. F. W. Nelson (Stockport) before the members and friends of the Oldham and District C.B.S. on Feb. 26th, 1907.

The Oldham and District Cage Bird Society held a very successful meeting on February 26th, at their headquarters, when they had with them as lecturer that much respected Yorkshire fancier from Stockport, Mr. F. W. Nelson. There were several strangers amongst the goodly number that turned up, and one and all expressed themselves delighted at the treat they had had in listening to Mr. Nelson. The President of the Society, Mr. Sharples, occupied the chair, and briefly introduced the lecturer. Mr. Nelson spoke as follows:—

Mr. Chairman and Gentlemen,—I will endeavour to give you as plainly and briefly as possible the method I follow in the management of my own breeding stock, and deal with the Fancy in as practical a way as I am able. What I intend to deliver to you to-night will be from my own experience, and should there be any statement in my lecture that any of you do not fully grasp I shall be only too pleased to explain at length. You are all aware that the lecture this evening is on "The Cinnamon-Marked Yorkshire Canary." No doubt there are a few fanciers present who have bred this variety, and I feel sure their experiences will not have been what they desired, so far as winners, at least, are concerned. I might venture to say that results with this variety are to most breeders not at all satisfactory. My opinion is that they do not keep enough birds, and therefore have not the scope in their room that they should have. Marked birds are not as easily got as some people imagine. You will find it easier to get clear birds than good marked ones.

MYSTERIOUS AND INTERESTING.

In the first place, you must understand that all Cinnamon birds are pink-eyed, whether self-coloured or variegated. Perfectly clear bodied birds are, so far as blood goes, to all intents and purposes, Cinnamons. This section of the cage bird fancy is undoubtedly one of the most mysterious and interesting, especially to the observant and experimental breeder. It is possible to cross other varieties together and gradually work out the results of the cross again so far as you desire to do so. This is hardly possible with the Cinnamon, its power of reproduction being marvellous. It offers a field in bird life where you can always find something fresh to interest, instruct, and amuse. In my remarks on the subject I shall often refer to the pink-eyed bird, and you will understand when I do so that I mean the full-blooded Cinnamon, whether self-coloured, variegated, or clear-bodied.

If a bird possesses the pink eye it will, when paired to another bird having the pink eye, produce nothing but pink-eyed birds; But if you pair a pink-eyed cock with a dark-eyed hen, the said hen having no Cinnamon blood in its veins, the young from this cross that are pink-eyed will be hens, and those having dark eyes will be cocks. You will thus be able to sex the birds in the nest; that is, if you are sure of the strain you are breeding with. If you reverse this order when breeding, and pair a dark-eyed cock, with no Cinnamon blood whatever in its veins, to a pink-eyed hen, you will breed no pink-eyed birds at all. If the hen be a very heavily-variegated one you will rear a big percentage of heavily-marked green birds. This is one of the safest ways of producing the Green Canary that I know of. The hens from this cross, though half-bred, will, when paired with a pink-eyed cock, fail to produce any pink-eyed cocks; all the pink-eyed birds from this cross will be hens. This is a mating which has been very disappointing to breeders who have been just commencing in this variety. But if you have 75 per cent. of Cinnamon blood in your cock bird, derived in the original cross from the male side, and a pink-eyed hen, you will observe in their produce that you have done away with the peculiarity of all the dark-eyed birds being of the masculine gender, and all the pink-eyed birds of the feminine gender.

The direct line, in my opinion, to breed Cinnamon-marks with safety, is to start with both pink-eyed birds. Where this is not workable (as in case you want to get better style in your birds, and cannot see your way without using a dark-eyed bird), let the dark-eyed bird be the hen, and work the Cinnamon blood in from the cock side. From my own experience and from numerous conversations I have had with several well-known fanciers on this point, I am convinced I am giving you sound advice. When I say use pink-eyed birds on both sides, and where this is not possible, have the Cinnamon blood on the male side, this is a point which may not seem of much importance to beginners, or those who have not tested it; but a careful trial will, I am confident, convince any fancier that the advice is worth following. I still maintain that you will not breed pink-eyed cocks with anything like certainty if you have less than 75 per cent. of Cinnamon blood on the male side, and that Cinnamon blood derived in the first, or original, cross from the male side. During the last few years the Cinnamon has been used so much that you can pair birds up, both dark-eyed, and still breed Cinnamon-marks. I have done it myself; but they have all been hens.

IS THE EVEN-MARKED YORKSHIRE GOING?

The even-marked Yorkshire is going out of date fast, and you will find in breeding Cinnamon-marked birds that the same rule applies, because you must get good marked birds in this variety, too. In days gone by a two-pointed bird was an even-marked one, now it must be a four or six-pointed bird to be evenly-marked.

In even-mark breeding you must avoid cap-marked birds. In the first place you must select your stock to produce the even-marked bird. Some of our best-known fanciers will tell you to start and make your own strain, but I am of opinion the game would be too slow to be put into practice by the present-day fancier. For more years than I can tell there have been breeders of the even-marked birds; thus, what is the use of throwing time away when you can buy birds ready for you to commence with? My advice is this—use your own judgment and you will find plenty of fanciers willing to sell.

HINTS ON BREEDING.

In buying I should recommend you to visit the vendor and thus get a chance to see the parents of the birds you wish to purchase or he wishes to sell. Then you would be able to form a good idea as to what they were bred from and what they are likely to produce. See that they are marked in the following places:—Eyes, wings, or tail. Avoid cap-marked birds, as I have said before, as this marking seems to spring up too often, and generally spoils a good bird. Avoid, as far as possible, any other variegation. Don't pair two even-marked birds together, or you will be sure to get a great majority of heavily-variegated youngsters, and these are generally a drug on the market.

I believe in in-breeding, but not too closely; the nearest I have bred has been own cousins. When you in-breed you must not do it merely for the sake of in-breeding, and you must know what you are going for—the hen side or the cock side. Then you can do as much in-breeding as you want. You must do it, however, for some fixed purpose—say, for instance, your strain is running short of length, and you have had to buy fresh birds from outside, you must then be careful, or you will soon lose many year's breeding. I am of opinion that the male bird carries the markings out much truer than the hen. I find that the hen produces style, quality, and position, and the cock markings and size.

To give you a case, my method of pairing would be as follows:—

No. 1 pair:—Cock, eyes and one wing marked; hen, eye-marked only.

No. 2 pair:—Cock, eyes and both wings marked; hen, a clear.

No. 3 pair:—Cock, eyes marked only; hen, both wings marked.

No. 4 pair:—Cock, eyes and tail marked; hen, wing-marked.

This will give you a table on which to form an idea (if it was put into working order) as to the matings which should produce some fair specimens, if your strain be reliable. Of course, you would not breed all good marked birds from this pairing; you would be liable to breed ticked and lightly-variegated birds. What one must avoid are body and cap markings.

"LIKE PRODUCES LIKE."

In mating your stock, bear in mind that to a great extent "like produces like," especially in the male birds. You must also understand that whatever price you pay for your stock birds, you will find there is a difficulty in getting good marked ones, as they very often are just the ones that go wrong in the nest, if you are lucky enough to get a few good marked birds there.

The Yorkshire Canary is divided into three distinct varieties—namely, the dark-eyed Yorkshire, the Cinnamon-marked, and the Liverpool Green. There are many points that can be better discussed than read, and practice is better still; but if I have not made myself clear on any point, or any gentleman would like to ask any question, I shall only be too pleased to answer him. When I commenced in the bird Fancy some 15 years ago, I always thought that some fanciers "knew something," but would not tell. I am not of that opinion to-day. The secret of success lies in looking well after your birds, and in studying their requirements.

DISCUSSION.

The Chairman.—Well, gentlemen, you have heard the admirable paper read by our friend, Mr. Nelson, and as he has just intimated that he would be pleased to have some discussion, I now throw the meeting open.

Question.—In reference to your statement re the production of Greens, do you think that is the quickest way? Answer.—I mentioned about knowing the strain you were working with. Time is nearly always wasted unless you have the pedigree of your birds. Of course, there are exceptions, which you may term "sports."

The Querist.—I may here state that I produced a strain of Greens by pairing a clear Yorkshire cock to a Green hen which followed the Norwich type. From the progeny of this pair birds were bred that stood in the money at Manchester and other All England shows. Answer.—One cannot rely on haphazard breeding. Get a dark-eyed cock and two self Cinnamon hens (or very heavily-variegated ones). From the progeny select the best specimens, and pair again, to best advantage, birds bred from each hen—half brothers and sisters.

Query.—How would you get the dark legs? Answer.—These would come, as a matter of fact, through breeding with the dark birds.

Query.—On which side do you rely for colour? Answer.—The male side.

Query.—How would you pair a cock bird with plenty of length, but very deficient in tail? Answer.—Carefully select hen as partner that excels in tail. Make a feature on this point alone if your cock bird is good in other properties.

Query.—Do you consider egg food suitable for winter feeding? Answer.—I do not. My birds have not tasted egg food since they finished moulting. I find it is apt to make them "soft." I use a mixture of seeds consisting of equal quantities of niga, hemp, maw, and summer rape (with plain seed) until about a month previous to pairing up. Then I slightly change from this, giving the hens five times more niga, and adding extra maw for the cocks. This I find a good mixture for birds that are continually travelling from show to show.

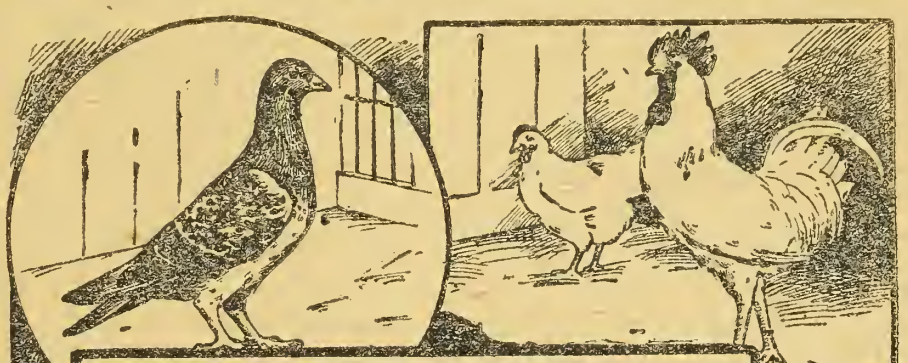
Query.—What is the cause of birds, in general, cracking the seeds and leaving the kernel in the seed box or on the bottom of the cage? Answer.—The birds are generally out of condition, or the seed is not up to the mark. I would advise you to take the plain seed away and give summer rape for three days, also adding as much Epsom salts as will cover a shilling to a wine-glass full of drinking water. Get the birds thirsty by taking the water away, and then put on the salts. Keep on for three days.

BEECHAM'S PILLS.

Another fancier gave his experiences on this point, and stated that he generally dosed his birds with powdered Turkey rhubarb for a few days, and on the second day gave some maw seed in the egg drawer. One of the "old school" of fanciers here chimed in, and gave some "fatherly" advice, saying that he found there was nothing better than Beecham's pills. This caused quite an outburst of good-humoured laughter, but the lecturer substantiated the remark somewhat, and said he had heard from "leading lights" of the Fancy that they administer them, and how they do it. Cut a pill in four; get a match stick and place between mandibles; then work one quarter of the pill in at the side, and get another match and gently push the pill down the bird's throat. Then close the beak and hold it between finger and thumb until you have seen the bird swallow.

Query.—What is your opinion of Parrish's chemical food? Answer.—I recommend it as a fine tonic, and to be given in a strong dose, making the water about the colour of port wine. Also to be given with that good old remedy, milk sop.—Another fancier stated that, in his opinion, the chemical food was best administered by using distilled water.

On the proposition of Mr. Steeple, seconded by Mr. Hampshire, a hearty vote of thanks was giveu to the lecturer for the manner in which he had treated his subject. A similar compliment was paid to the Chairman, and a very pleasant and instructive evening was thus brought to a close.



Important News to Breeders

AND

Flyers of Pigeons and Poultry, . .

Aviary Keepers and Dog Fanciers.

All Breeders and Flyers should know that Hall's Sanitary Distemper is the best thing known for ensuring perfect cleanliness in breeding and store cages, show pens, fowl houses, kennels, etc.

It is sold in tins ready to mix with water, and is applied with a whitewash brush.

One coating effectually destroys all the insect life and fever germs, etc., which collect in cages and kennels.

At the same time Hall's Distemper is non-poisonous to bird and animal life.

It is made in two qualities: the outside quality is the one specially recommended for the above use, and suitable colours are—

No. 17, Cream. No. 66, Pale Green. No. 47, Pale Blue.

HALL'S DISTEMPER

is sold by all Oil and Colourmen, Stores, etc.

Remember to ask for Outside Quality.

Sole Manufacturers—

SISSONS BROTHERS & CO., LTD., HULL.

199B, Boro' High Street, London, S.E.

Full particulars with sample and shade card will be sen post free on application.

HOW TO MAKE LIGHT BUNS.

By using Eiffel Tower Bun Flour the most inexperienced person can make *light* Buns and Cakes with certain success. Try a 1d. packet. Save Eiffel Tower Labels for 1/6 picture free.

The Popular Plainhead:

My Experiences of the Norwich Canary.

By W. VARDY.

(Continued from page 145).

TO BREED THE IDEAL.

In the opening instalment of my article, I described the points which I think the ideal Norwich Plainhead ought to possess. I shall now endeavour to explain the lines on which I work when breeding my own show specimens—not, of course, that I hold them up as being true copies of the above mentioned ideal. I only wish they were. Still, I can, at any rate, say with truth that my birds represent years of trying to attain perfection and a deal of thought and experience in endeavouring to better them.

In the first place you must have a large cock bird, one with a good head and neck. Never mind if he is a wee bit long and free in feather, so long, that is, as the feather is of nice, soft, silky quality. Avoid birds carrying to much feather, if that feather is coarse and harsh. Two other points a stock bird must possess are a straight, well-braced and carried tail, and plenty of colour.

The hen to mate with the above cock bird I can best describe by saying that she should approach as nearly as is possible to the ideal bird of which I have spoken. In only one point do I willingly give anything away, and that is in size. The hen may be small—in fact I like a hen on the small side—but she must be good in other points.

Readers will gather from this that I place great importance on the proper choice of the hen. I certainly do. I am convinced that no breeder of Norwich Plainheads can hope to do much good unless he has some good hens in his room, and takes care to always keep the female side of his stock up to the highest possible standard. My experience has taught me that, broadly speaking, the type and quality come surely from the hen, and size and colour from the cock.

THE IMPORTANCE OF STOCK BIRDS.

If you breed some cock birds rather too long and too large for the show bench, these are just the sort to keep to mate with good exhibition hens. I would much sooner breed from birds matched in this way than from two good exhibition birds which are of medium size. There are some excellent birds bred other ways, I know; but I also know that I myself have had the best results when adopting the procedure just described.

I can tell you a little tale bearing on this. Many fellow fanciers who know me will remember that about six years ago my show birds commenced to take back seats on the bench—that is to say, first prizes did not come so often, but second and thirds and commended cards. The reports in the Fancy papers read: All there for type, colour, and quality, but a trifle too small. My friends told me the same thing. So, of course, I began to "look round the corner" to find out where the mischief lay. I was not long in hitting on the cause of the loss of size. I had been parting with all my stock birds, and so had been compelled in many cases to pair show birds to show birds. The above was the unfortunate result, as my pedigree book soon proved when I carefully consulted it. Neighbouring friends and other fanciers had been calling on me, or writing to me for birds, and everybody seemed to want large stock birds, and as I am never above obliging anyone when possible, I found in the end I was left with hardly any for myself. It was a funny thing, too, that when I wanted to get stock birds myself, no one would sell me a feather—they all said they couldn't spare them, and some of those who had my own stock birds wouldn't even sell me back a youngster bred from them. It taught me a bit of a lesson, I can tell you, for it took me more than one season to regain the ground I had lost. So once again I would impress on would-be breeders of exhibition Plainheads that they must have suitable stock hens in their rooms as well as show birds, for they are the most important of the two.

DARK BLOOD ESSENTIAL.

The breeder must have plenty of dark blood in his strain; but he must mind and have the right kind of dark blood. I should describe the ground colour of the bird I prefer as something like the ground colour of a good jonque Lizard. It is my firm opinion, in fact, that the Lizard Canary is the original "fountain of colour" of the Norwich Plainhead of to-day. This kind of ground colour I consider puts the finishing touch on a good marked (or variegated) bird.

It is not a very easy job to establish this ground color in one's strain, but the breeder must make up his mind to get it, and as soon as he can. So look out for the right kind of birds whenever and wherever possible.

The best markings, to my way of thinking, are both wings and one eye, or one wing and both eyes, or one eye and one wing, and so on. All these are good markings, and either will tell heavily in the ticked or unevenly-marked classes.

The above markings I do not consider hard to get, as you can soon graft them into your strain by careful, judicious mating. Put a marked and a clear bird together, or two lightly marked ones, or two clears, and so on. But if you should put two clear birds together, let both of them always be bred from marked stock. If, though, you breed with clears too often, it is important to remember that they soon begin to lose colour and quality. This is the reason I so strongly advocate the use of dark blood, which means that the breeder should never be without marked birds in his room. I should always, in fact, recommend that there be a marked bird on one side, especially if you have a bird or two in your possession marked in the manner described above.

HOW TO GET COLOUR.

Suppose you have a yellow cock marked on both wings and one eye—or both wings and both eyes—and a buff hen marked in somewhat the same manner as the cock, mate them up for one nest. The reverse mating—i.e., buff cock to yellow hen—will also answer quite well, though of the two I certainly prefer yellow cock to buff hen. No doubt you will get some young nearly all green, and probably some self greens as well. The ground colour in these young birds so bred will be better than the ground colour seen in their parents. It is in this way, in fact, that you improve the colour of a strain. Now these youngsters—bred in this way—are the right birds to mate to clears, or to birds bred from two clears. Or you can pair one of the heavily variegated or green specimens to a wing and eye marked bird, and breed some more greens. If you should get a large yellow green cock, this is the bird to stick to. Don't be tempted to part with it, as such are invaluable stock birds—you have a "fountain of colour" in this bird, and one which has in its veins the tendency to throw good marks. I am presuming, of course, that he is presentable in the matter of type.

When you mate this yellow green cock up, select for his partner a clear buff hen bred from two clears or very lightly-marked parents. The young from this pair will most of them be marked; but the clears will be yellows, as a rule, and teeming with colour and quality—none of them will be crealy-backed birds, but solid in colour right to the tips of the feathers (I am here referring to the yellows, of course). These specimens are simply invaluable to any Norwich breeder, for you can pair two such clears together without any loss of colour. And, by the way, to mate two clears together which were bred from marked stock is the right course to pursue if you find you are getting too many heavily marked birds among the young birds you breed.

DOUBLE YELLOWING AND DOUBLE BUFFING.

It is my firm opinion that the above method is a much better way of getting and keeping colour than resorting to double-yellowing (the pairing together of two yellows). I know that you lose substance when you double-yellow; in fact, I have never, to my knowledge, gained anything at all by indulging in it.

I am in favour of double buffing to a certain degree. If your stock is deficient somewhat in head and neck, double-buffing will help you. I have myself bred some good birds from the pairing together of two judiciously selected buffs. But one wants to be careful not to go too far, or he will lose much more than he will gain. For one thing, the quality of the feather will soon show signs of deterioration.

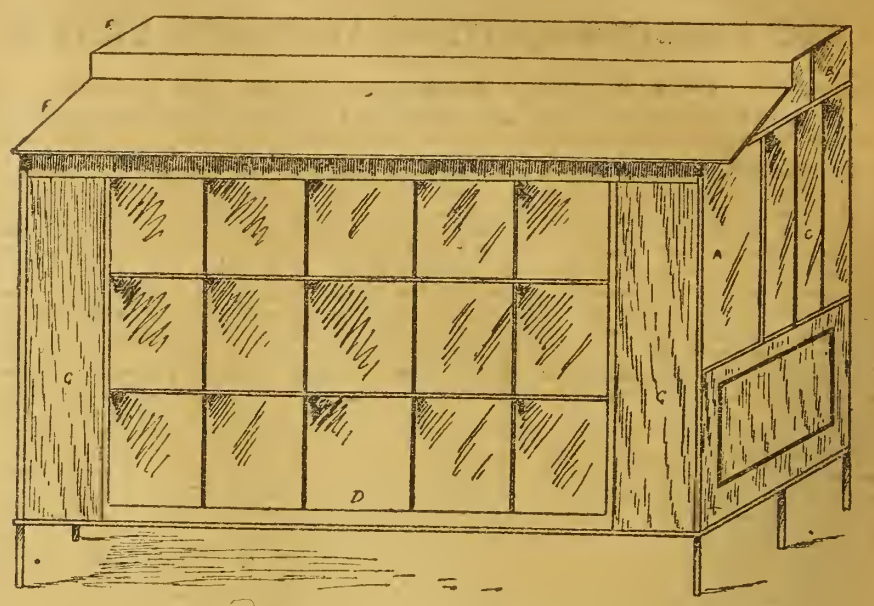
The birds to double buff with must be bred in the ordinary way—that is, from the mating of yellow to buff. One of them must be heavily marked, or green, and short in feather; while both must be of good quality, and tight in feather. If these points are not looked to, you run very great risks of getting slack-feathered youngsters. If you carry out the double buffing on the lines here laid down, you are quite likely to breed a grand bird. But do not let this draw you into carrying the mating of buff to buff too far.

One of the chief objects of the Norwich Plainhead breeder—and one of his chief difficulties as well—is to keep up the size of his strain, and at the same time to retain type and quality of feather. When one gets size, one is only too apt to lose the other two equally important points.

Always make a rule of keeping in your room a few extra large cock birds bred from your best pairs. If you happen to have an extra big hen as well, you can do no wrong by pairing these two "big 'uns" together for one nest; but never do this unless both birds have good, bold, broad heads, and short, thick necks. This mating, mind you, is only to be indulged in if you find a difficulty in keeping up the size of your stock by the usual method of mating laid down in an earlier part of my article. You must keep the cocks bred from the "big 'uns" and mate them to the most typical hens you have in your room, and hens which have not only type, but extra good quality, tight plumage as well.

In all my remarks on matching birds to produce the best youngsters from the show point of view, it must be understood that the general principles I have laid down should always be taken into consideration in the selection of the couples. The points which govern the cock birds and the hens must be kept in sight, likewise the matters of ground colour and markings. In any case, keep size in the cocks and you cannot go far wrong; at the same time pay particular attention to the type and quality of your hens.

(To be continued.)



Mr. R. H. Harrison's Outdoor Aviary.

A READER'S OUTDOOR AVIARY.

Enclosed is a rough sketch of my outdoor aviary, which I think might be of use to many of my fellow fanciers. I erected it at the small cost of about 15s. It has a shelf fixed the full length of the back, under which you can make a first rate flight. I find it a first class place for our feathered pets, also a quiet spot for breeding in. Below is a list of the material I used. Any builder will sell you an old sash, and two-inch spars for the framework. The egg boxes get from any grocer or egg merchant.

	s.	d.
8 egg boxes at 6d.	4	0
Old sash for front	1	6
2-inch spars for framework	4	0
Glass for two ventilators	1	6
Nails, lock, paint, etc.	4	0
Total	15	0

Length 6ft. 6ins., depth 4ft. 8ins., height at back 7ft. 9ins., at front 6ft. 3ins. A: Glass ventilator. B: Top glass ventilator. C: Glass end. D: Glass front. E: Piece raised eight inches at back. F: Sloping roof. G: Wood ends of front.—R. H. Harrison (North Shields).

BENGER'S

Food

assists nature.

It is used mixed with fresh new milk and forms a delicate and nutritive cream which can be enjoyed and assimilated when other foods disagree. It is entirely free from rough and indigestible particles which produce irritation in delicate stomachs.

Mothers and interested persons are requested to write for Booklet, "Benger's Food and How to Use it." This contains a "Concise Guide to the Rearing of Infants," and practical information on the care of Invalids, Convalescents, and the Aged. Post free on application to Benger's Food Ltd., Otter Works, Manchester.

EARLY GREEN FOOD FOR BIRDS.

By T. H. Kinch.

This article may be of some interest to fanciers who have not the run of the fields, but live in town, and are unable to get their green food fresh. I know a great many depend upon watercress. This food may be all right when procured fresh, and no doubt is relished by the birds, but I do not approve of it, and never have done. I much prefer other foods, especially during the earlier part of the year, as the springs are so trying, and early frosts often leave green food which is fresh gathered very uncertain to use. It frequently causes serious disasters, both to old and young birds. A very simple, good, and early green food can be obtained at little expense, and this I recommend after over 20 years' experience.

USEFUL CRESSES.

First on my list is the winter rape, or cole seed; this can be planted in several ways, one of which is to get a dish, place a thick sprinkling on the bottom of it, and cover it with water. This should be planted now, and it will be ready for use by the time the first round is due. A small portion should be cut out of the dish, seeds and all attached, and chopped up with the egg food; this will form a very tempting feed; the smell of it when mixed with the soft food is very appetising, and is much relished by the birds. Another kind is the common garden cress, which can be grown and used in a similar manner. Another good way to use this seed is to sow it on the top soil of a box, and then pull up daily as much as is required. It can be given either with the egg food or separately. If it is too much trouble to grow it, it can be bought ready grown from nurserymen. Yet another excellent food is mustard seed, treated and used as above. If these green foods are relied upon solely, there will be no disasters from frosted diet, as is often the case from using the outdoor green food. Of the three I have mentioned I much prefer the cole, or winter rape, seed.

CHICKWEED, ETC., IN POTS.

Other green foods may be obtained, such as chickweed, groundsel, and dandelion, by planting the roots in flower pots, each pot to have as many roots as it will hold. They should be kept in the bird-room window, or in any place where there is some light, and well watered. Anyone who has a garden can also grow these outside, say planted in April: they could also grow the watercress, which is easily raised in a garden from seeds or cuttings; but it would want plenty of water. Under a north wall or hedge would suit this particular plant well, and it would grow freely and always be at hand for use. I much prefer any of these to lettuce.

Some Observations on Hard-Billed British Birds.

By S. W. Birchley.

A Lecture delivered February 20th before Swindon C.B.A.

(*Continued from p.* 188.)

THE BULLFINCH.

Next to the Goldfinch comes the Bullfinch in popularity, I believe. Although he is not possessed of any very fetching song the piping of the Bullfinch is very sweet, if inclined to be a little mournful. He is a most handsome bird, and well repays his keep and the time bestowed upon him.

The male bird for exhibition needs to have a good stout bill; the skull should be broad and of a jet black colour, and the back of the neck and back a delicate French grey; the flights of the wings should be a very silky blue black, with a grey white bar across each; tail, blue black; rump, pure white; breast and cheeks of the brightest red possible.

An exhibition specimen does not need to be excessive in size. Get one moderate in this direction, with good broad chest and short in neck. With care he can be made to shine like satin itself; but unfortunately our friend has one bad fault, and that is, if you give him too oily seeds without ample room to exercise, he will grow fat, which will sooner or later prove fatal. He is particularly fond of a bath which should be just chilled in winter time.

If he is fed on plenty of the fruit of the elderberry, blackberry, and privet, his colour can be well maintained throughout the show season, but without these his breast colour will fade considerably in time. He is very fond of a meal-worm or spider when obtainable, also the prunings of fruit trees. On no account fail to give these birds green food in season, such as chickweed, lettuce, etc.

The female makes an excellent muler if eage moulted, but she is of little or no use as an exhibition bird. The Bullfinch is easily caught in a trap cage with a hen in the underpart, if the same is placed in their haunts.

It is not wise in my opinion to hand rear these birds; get the wild caught specimens, as they are much more robust in health than hand reared ones, and most easily tamed if treated kindly.

THE LINNET.

The Linnet is undoubtedly one of the commonest of our finch-like tribe, but none the less for that it is one of our best. Its song, to my mind, is better by far than that of the Goldie, or any other British hard bill, and even runs the Nightingale and Blackcap a close race. It costs no more to keep a good specimen than a bad one, and the former I strongly advise you to do. They are most easily caught in the winter time when the harder weather is with us, but I advise you to buy one from a person who knows what a good linnet is.

Linnets may be divided into two distinct varieties, viz.: The red-breasted and the stone-breasted. The first-named, although equally as good in song as the latter, is of no use for exhibition purposes, as their breast markings are indistinct.

When looking for a show specimen, seek for one with unbroken lacing on the breast reaching well down the belly and round the thighs; the larger in body the better, showing plenty of white up the primary quills. The back of the head and nape of neek, as well as the whole of the back and wings, should be well marked with distinct working of two different hues of a beautiful rich chestnut brown. The linnet, like many other of our feathered friends, greatly improves with age, and if you obtain a good one at the outset he will well repay for keeping. You will find him a little difficult to steady, but with care and kindness he will soon see that you mean him no harm, and steady down accordingly.

I find this bird is rather a harder one than the Goldie to rear, and a little more attention must be paid to his diet. Equal parts of best Spanish canary and German rape should be his staple food, and an occasional pinch of maw, linseed, niger, and teazle will be appreciated, particularly the latter. In the summer-time provide him with all the natural wild seeds you can obtain, such as hardheads, dandelion heads, shepherd's purse, etc., not, of course, forgetting a little greenfood occasionally. With regard to moulting this bird, I think a little colour food enhances the richness both on the chest and back, and as a rule they will take it readily.

For a medicine you will find nothing to equal a little Epsom salts. I mention this as the bird is rather hard to keep in health if not well looked after, as it is very subject to diarrhoea and kindred ailments. On no account neglect to give him a bath, as this greatly adds to the gloss and finish of the bird when shown.

THE BRAMBLEFINCH.

The Bramblefinch, which is only a winter visitor to our shores, falls a very easy prey to the cateher in hard weather. He is truly a handsome fellow and looks exceedingly smart in an exhibition cage, and is fast becoming a great favourite. Many Committees are now scheduling a class for him alone.

The prineipal points that constitute a show specimen are as follows:—Firstly, size, with a good headpiece; the feathers on the head and back should be of a rich blue-black, each one being spangled with chestnut brown at the tip; take particular notice your bird is not spectacle eyed, or in other words, has a circle of light buff feathers round the eyes. The neck and breast should be of a rich orange brown, carried down the body as far as possible. The sides, from the centre of the wings to the thighs, should have at least two rows of black feathers, each standing apart from one another, called ticking. The belly should be snow white, extending to the vent; the wing bars should be buff, and the shoulders the same colour as the breast, and it is necessary to have the latter of an even colour throughout.

Condition in these birds, as in all others, is a great thing, and it is absolutely necessary if you are to do any good on the bench to-day. There is one thing that is greatly against the Bramblefinch as a show bird, and that is he is very hard to steady down, and it requires the greatest of patience to succeed in bringing about this state of affairs.

A bath with this bird is a great necessity, and if he won't bathe, I advise you to spray him. Give the same food as recommended for the Chaffinch, with a few white oats and a little grass seed occasionally, not forgetting beech mast and green food in season.

A NOTE ON THE GREENFINCH.

Next I will give you a few lines on the Greenfinch, or green Linnet, a most handsome bird, although till lately despised as far as exhibiting is concerned. But undoubtedly the time is not far distant when our friend will have a class in every show of any repute; what with his beautiful pale olive and yellow plumage, his peart eye and prominent beak, he has few equals as an exhibition bird.

There are two distinct species of Greenfinches—yellows and buffs. In choosing your bird for exhibition go for one of good size, bright in colour, standing well up on the perch. The body colour needs to be well blended, and free as far as possible from grey and bronziness; obtain one showing plenty of yellow in the wings, tail and belly, and the black flights should help to form a beautiful and decided contrast. It is a very hardy bird, and should well suit a beginner. It is very fond of sunflower seed and various green foods in season, such as chickweed, lettuce, etc., also various wild seeds, which should be given when obtainable.

He makes a first-class mule and hybrid breeder, and some most beautiful hybrids of his parentage have been on exhibition this last season. On no account forget his bath, for without this his tail will in no time get in a very wretched condition, and that will make you dissatisfied with him. Feed on a good stock mixture, and no trouble should follow.

THE ENGAGING SISKIN.

This little chap, well known to all of us, is partly a migratory bird; he is a great favourite of mine; he has a most engaging little song of his own which he will continually please you with if you treat him rightly. He can be bought for a very low figure, but very rarely you get a really good specimen.

When selecting a Siskin for exhibition purposes, obtain one of good size, with a well defined and laced cap. One of the most important items is the bib, which consists of a formation of minute black feathers under the lower mandible. The colour should be as follows:—Cheeks olive green with under flue of black at ears; chest and breast canary chrome shading off to a creamy colouring at the vent; back of neck and back olive green slightly streaked with black; wings black with yellow bar; the smaller flights are edged with buff; rump orange yellow. The sides below the wings should be well and distinctly ticked with black.

(*To be continued.*)

HINTS ON THE MANAGEMENT OF DOVES.

A family of birds held in great estimation as pets is that of the *Columbidæ*, or Doves, says a writer in a contemporary. The four species to be found wild in this country—viz., the Wood Pigeon or Ring Dove, the Rock Dove, the Stock Dove, and the Turtle Dove—do not do well in confinement. But many foreign Doves will keep in robust health, and lay and rear their young in a cage.

The best known Dove, and the one usually to be seen for sale in bird fanciers' shops, is the Barbary or Collared Dove. It is generally, but erroneously called the Ring Dove, the name that belongs to the Wood Pigeon. The common wicker cage used for Blackbirds and Starlings is hardly large enough for a pair of Barbary Doves, though they are frequently kept in these cages. They are more comfortable and happy in an aviary, where they will increase and multiply to a great extent. About an inch in depth of coarse sawdust in the nest pan helps to keep the eggs from rolling about, and lessens the chance of insect vermin. Two eggs are laid, which are incubated for seventeen days before the young birds make their appearanec.

The parent birds require no different food when they have young. The diet should consist of wheat, tares, and dari, mixed together, with now and then some canary seed and millet. They must always have plenty of fresh water, as well as coarse sand, and some broken up old mortar. Barbary Doves are perfectly hardy. They will live out of doors in health during the coldest winter, and attain to a good old age. One Dove belonging to a resident in Brighton has been in possession of its owner for twenty-three years. Another, also in Sussex, has lived without a mate in a Blackbird's cage for fifteen years. These Doves will have four or five broods in the year.

A Dove that is becoming a great favourite is the Java Dove, a pure white bird, in shape and size much like the Barbary Dove, of which it is a variety. Why it is called the Java Dove is not known, for it is believed to have come from the Mediterranean shores of Africa, and is not found in Java. At the back of the neck, where the black half circle is to be seen in the Barbary Dove, the feathers of the Java Dove have a dull appearance, which renders the ring quite perceptible.

ESTABLISHED 102 YEARS.

HINDHAUGH'S

'SPANISH' SEED.

Absolutely the finest the World produces—Boldest and Cleanest.

MONEY CAN NOT BUY FINER.

SPECIAL OFFER:—56lbs. for 13/-. Carriage paid in U.K. Cloth bag included gross (excepting Ireland).

This very special offer is made to introduce this "GRANDEST OF ALL SPANISH CANARY SEED" to all bird fanciers and includes delivery to any station in England, Wales and Scotland having through communication with the North Eastern Railway from Newcastle, by passenger train.

We quote as follows:— DISTANCE NO OBJECT.

"Sample A"	Finest obtainable Re-cleaned Spanish Canary Seed..	10/-	per 56 lbs.,	2/9	per 14 lbs.
"Sample B"	Very Fine Bold Re-cleaned Spanish Canary Seed ..	9/-	,, ,,	2/6	,, ,,
"Sample C"	Really Good Bold Re-cleaned Spanish Seed	7/-	,, ,,	2/-	,, ,,

Packed in paper parcels up to 28lbs., free. Over 28lbs. should have 3d. extra remitted for cost of cloth bag to ensure safe delivery. *These prices are free on rail.*

Carriage by passenger train (payable by buyer) is only :—(in England, Wales and Scotland)

Above 50 miles and not exceeding 100 miles :—7d. for 14lbs.	11d. for 28lbs.	1/9 for 56lbs.
100 ,, ,, ,, 200 ,,	10d. ,,	1/2 ,,	2/4 ,,
Over 200 any distance	11d. ,,	1/6 ,,	2/11 ,,

NOTES ON HYBRIDS AND HYBRID BREEDING.

By Thomas Smith.

The most fascinating hobby to which the lover of birds can devote himself is that of breeding Hybrids, the crossing of two wild birds affording great possibilities. I have tried common Canaries, Belgian and Dutch Fancies with success, and also the Bullfinch hen with Redpoll, Canary, and Greenfineh. I have had no difficulty in getting all of them to mate with the Bullfinch Hen, but I have so far only been able to hatch and rear young from the Greenfinch-Bullfinch. From the first pair there were six young, and out of that lot two gained first prizes at the Crystal Palace show; they were exhibited on different occasions. One of them had a short career, dying suddenly at a show, but the other was purchased by Mr. Ball (St. Helens) and afterwards sent to Mr. Williams, of Liverpool. He is still fresh in the memory of fanciers at our leading shows.

A WINNING GREENIE-BULLIE.

In 1906 I put up half a dozen pairs. I had lots of eggs, and hopeful signs of success, but, eventually, succeeded with only one pair—a medium-sized, high-coloured Greenfinch cock, and a large Bullfinch hen. Three Hybrids were hatched, but only one was successfully reared; he was exhibited at the City of Glasgow Show in October last and passed into the possession of Mr. Shellam (Cardiff), under whose care he has gained several first prizes and other honours. This Hybrid is very highly coloured, and is tinged over the back with orange-red colour.

The hatching and rearing of the Hybrids I allude to afforded me much satisfaction; they were easily reared, and went through the moult quickly. Hybrids are easily kept in condition, and they are tractable and taking. It has been alleged that the Greenfinch-Bullfinch Hybrids are so numerous that they would fall out of demand; I found it far otherwise. There was plenty of room on the show bench last year for first-class Hybrids. The Bullfinch hen has been in demand for months, and no doubt many breeders intend to try their luck this coming season.

THE REDPOLL-BULLIE.

The Canary-Bullfinch Hybrid used to be a rara avis. But it has become numerous, and well known at recent leading shows. The present day rarity is the Redpoll-Bullfinch. There does not seem to have been a single specimen of this cross of late on the show bench, so that the breeder who can produce a good one will be well repaid for his labours, not to mention the chances of success at shows. The parentage of both birds comes out strongly, and this cross has ever been, and will continue to be, a very strong favourite.

The Hybrid section has made rapid strides of late years, and the prominence to which it has been raised owes much to the energy and liberality of Mr. John Williams, of Liverpool, always ready to acquire a really good bird, thereby encouraging breeders all over the country.

WHERE MOST BREEDERS FAIL.

Wild birds in confinement are late breeders, and herein lies the reason of much of the lack of success. Breeders expect their Hybrid pairs will commence breeding, like Canaries, in March or April, with an odd pair. They may prove successful, but as a rule it is the months of May or June that give the best results. Even then they keep a large assortment of Canaries busy testing the eggs. Bullie Hens have been known to lay 40 to 50 eggs in a season.

No breeder need hope for success unless well equipped with foster parents. It is a common experience to have only one fertile egg in a nest; it is therefore an advantage to have Canary eggs set upon the same date, as a young Hybrid thrives better by having another young bird side by side with it. They should be hatched on the same day or a little earlier, for a Hybrid will outgrow Canaries in the nest, and arrive at maturity much sooner. The foster parents should be vigorous and healthy, as they are severely taxed in the bringing up of Hybrids. The enjoyment of Hybrid breeding is added to by the time of the year work begins, namely, well on in May or early in June. The days are then long and green food plentiful, rendering the work easy and pleasant.

Speaking as to Scotland, an extraordinary effort is being put forth this year to inundate the shows with Bullfinch Hybrids. I wish all "triers" success.

Grateful—Comforting.

A welcome delicacy for

COCOA

Breakfast and Supper.

The Gouldian Finch.

As Seen In Its Native Wilds.

(Continued from page 232.)

The appended account of this fascinating and beautiful Foreign bird is taken from the finely got-up catalogue just issued by Messrs. Payne and Wallace, Direct Importers, The Little Zoo, Bath, entitled, "Life Amongst the Birds and Animals of Australia."

We claim to be one of the first firms to bring this bird down to Sydney, New South Wales. In 1888, we were trapping for Etable (and others), who kept a bird stall in the old Victoria Market, George-street, Sydney. It was at this time that Dr. Ramsey bred from Gouldians which he had purchased from Etable. There can be no doubt that these birds were trapped by us, as we were, and are to this day, the only firm which goes to North-West Australia trapping.

We will now depart from the subject of the Gouldian and place before the reader a few of our experiences during

A BIRD TRAPPING EXPEDITION IN NORTHERN QUEENSLAND.

We left Townsville, a seaport situated in Northern Queensland, for a trip overland to the Gulf of Carpentaria, to see if we could find something new in the way of birds. This was in the nineties. On the route we we taking we should find no natives, as they are dying out fast, except, perhaps, a few stragglers here and there; so we could not get the natives to come with us. On this account we had to go alone. At this period we both took our share in the trapping. Our turnout consisted of a new wagon, three draft horses, saddle horse, half-ton of seed, and roll of half-inch mesh wire netting, 2 cwt. flour, 70 lb. sugar, 5 lb. tea, 14 lbs. tobacco, rice, bully, jams, tinned milk, fish and meat, medicine chest, and many other things too numerous to mention, which, altogether, weighed about a ton. We also had with us breech-loading guns, Winchester rifles, revolvers, and plenty of ammunition. These articles are indispensable in the Australian Bush. After loading up we started out on a Saturday afternoon; needless to say, we did not get very far that day. We drew up about five miles out from Townsville, and camped on the banks of the Boley River. The one which is riding the saddle horse goes on ahead to find a suitable place for camping. By the time he has made a fire and other preparations, the wagon is generally on the scene. The horses are then taken out, unharnessed, and taken to the water, hobbled, and bells put on, then they are right for the night. We now attend to our own wants, and make tea and sit down to our last meal of the day. At this time we have some baker's bread, probably the last we shall see for three months. This being our first night out, we have our meal in silence, except for the tinkle of the horses' bells, and the cry of the "Maupauk" (the Great Night Jar). This is a bird of the Owl family. It has a head somewhat resembling that of a frog, and makes a croaking sort of noise. After supper, we think of bed, and having no bed or pillows with us, Mother Earth has to be our bed, our boots, covered over with coat, our pillow. We have with us a waterproof which is about two yards square. This is laid out on the ground, and our rug or blanket is doubled and put over it. We lay on the underside of the blanket, and cover ourselves over with the upper part.

The sky is one sea of stars with the Southern Cross well overhead. This is not a very nice spot for camping, as the district is well known for the number of black snakes that are in the vicinity. We are up early, for one cannot sleep with the noise of all the birds chattering, and the thrilling cry of the Cucka Burra, as the natives call it, or Laughing Jackass. One of us goes to look for the horses, as they are not tied up, and sometimes they are nowhere to be seen. We have known them wander away for about five miles, but they generally leave some track to show which way they have gone. After they are found and harnessed, breakfast is partaken of, and then we shift on again. Our next stage takes us sixteen miles before we come to any water, so we have to take some with us in a canvas bag, holding three gallons, which is hung on the back of the wagon. During this stage we have to climb a 1,200 ft. range. We find it very slow work getting along. It is not a wooden-block road, we can assure you. Upon reaching the top of the range, after an arduous climb, we stop for dinner. The horses are taken out, and left to graze for about an hour after their hard work. There being no water we have to start on our three gallons, with which we have to be very sparing, as this has to last us for another ten miles.

Dinner being over we harness up and get going. The roads are now much easier to get over, and we do not stop until we reach our next stage, which is Larkin's Water Holes. Here we find a few Mountain Magpies, some Mealy Rosellas, and one or two Crimson-winged Parrots. The White Hawk is found in this district; it is a lovely bird, pure white, yellow legs, and orange-coloured eyes. We have, on several occasions, shot this bird, but have never been successful in catching it alive, as they are very scarce.

The horses are once again attended to, and then we prepare for supper, but before we can have the last meal of the day we have to make some bread. It might be of interest to give our way of making bread:—One of us makes a "damper," as the Bushmen call it, or dough, in the following way: About 4 or 5 lb. flour, one tablespoonful cream of tartar, one teaspoonful of carbonate of soda, and the same quantity of salt. This is then mixed into a stiff dough. During this time, the other has been preparing a big fire. The dough is then placed in a tin dish and put in front of the fire. When the fire has practically burnt itself to nothing but a glowing red mass of charcoal, a hole is made in the centre, into which the dough is put, and the red-hot ashes heaped all over it. It is then left for about half-an-hour, when the rising of the bread causes all the embers to crack. We then rake it out of the fire, and with a bunch of grass beat off all the cinders and ashes that are clinging to it, and then we have our bush-made bread. This making will last us about two days, when we have to make some more. After this we have supper, and a smoke, and then "to rest."

Our next camping place will be more interesting. It is the self-same place as where Leichardt's ill-fated exploring party camped in the forties. This spot is situate on the banks of the Burdekin River, and is fifteen miles from our last camp. There is a very large gum tree here on which Leichardt cut his initial letter L into the trunk. There is plenty of game and fish here, also grass for the horses, so we camp here for two days to give the horses a rest. During this time we have a bathe in the river, and wash our clothes. We have been sitting on the banks of the river, fishing, when the Platypus would slowly glide to the surface and have a look at us. After its curiosity was satisfied it would glide out of sight again. They are very cautious, and the least movement will cause them to retire altogether. If not disturbed it will continually put in an appearance. It is a curious animal, a sort of small beaver with a duck's head. Its enemy is the Eagle Hawk. This bird will wait for it to make an appearance near the surface, and will then swoop down and pick it out of the water and away with it. Whilst we were at this spot we saw a pair of Bleeding Heart Doves, but were not successful in catching any. It was the first time we had seen them in Queensland. We were under the impression that they were found in New Guinea only, but as it is no great distance across the Straits, there is no doubt they had flown over. No doubt they do this occasionally.

When the two days are up we start off again. This goes on from day to day, and we are afraid it would be testing the patience of the reader too much if we gave our daily travels throughout the trip, so we will skip 200 miles, and we find ourselves going over the Newcastle Range, through the Gold Belt, and on to George Town-on-the-Etheridge. A few miles further on we come to Forrest Home. It is here that the Masked Finch is very plentiful, so we stop to get a few cages of these pretty little birds. This is the first bit of trapping we have done since we started.

We are about 340 miles from Townsville, and we push on to a place called The Springs, which is about 20 miles from Croydon. There is plenty of good water here, and a large number of Pandamus trees. This is the home of the Finch, and the Crimson Finch in particular. We camp here for about three weeks. This is the district where we catch the beautiful Gold-shouldered Parrakeet, the Black-headed Rosella, the Bicheno, the Ruficanda, and many others. Of course, some of these extend right across to the Western shores. We will not explain our methods of trapping here, as that is being dealt with in another part. The Dingo is very bold in this part. We had one actually try to eat our harness. We shot a good few of these before we finished, however, as the Government pay 5s. each for the scalps.

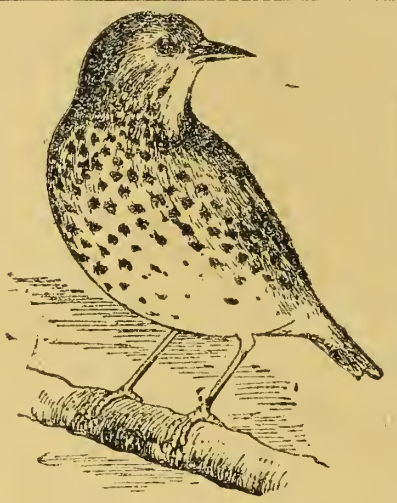
(To be continued.)

THE
BIRD WORLD MAGAZINE
FOR MARCH
IS NOW READY.
Order it at once from your Newsagent.

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "Eastcote," Alma Road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

March Notes.

The wild birds have begun to nest. The first of our common species to commence operations is the familiar Robin. He was courting when the snow lay thick upon the ground, and the hard frost was sapping the life out of the struggling vegetation. Robins ways are somewhat curious. In the early autumn they come in from the fields and woods, where as young ones they have roamed at their own sweet will. Although it is possible some of them have scarcely seen a human being, they are nevertheless trustful and familiar from the first. During the short days of winter they court our attention wherever possible, singing from the garden fence, or even entering the door for stray crumbs.



The Song Thrush.

Now all is changed, quite suddenly, without warning. The familiar bird has become distrustful and suspicious. Somewhere round the outhouses or among a bundle of pea sticks he and his partner are collecting a heap of refuse, destined to be the home of the chicks. Some birds are so distrustful of mankind that they have gone right away to the woods and hedgerows, where some hole in a tree or mossy bank meets their approval. And yet so peculiar is robin nature, that we have also quite the opposite picture. One has elected to stay the summer in the same spot where he spent the winter, and has commenced to build in a rush bag, constantly in use, and so familiar is he that he will allow you to watch him at his work. I sincerely hope he will be successful, although, unfortunately, cats are numerous.

The rookery is all bustle and animation. Some of the birds are busy bringing sticks from far and near, others are fighting and quarrelling, either about the selection of partners or the site of the nest, most probably the latter, for pairing should have been settled some time ago. There is a good deal of chasing and rushing about after each other, not only couples, but three or four together. They are dreadfully suspicious birds; one dare hardly look at another's nest but he is set upon as a thief and vagabond. During all this squabbling some are simply sentinels over the nest, and these caw incessantly, adding their voices to the tumult. When heard at a distance the sounds of the rookery strike pleasantly upon the ear, but one would hardly like to be always stationed under the trees in the month of March.

The Song Thrushes have been very irregular in their song this winter. It is only here and there we have heard a bold bird singing stoutly. No doubt the weather conditions have had something to do with it, and it does not appear to me that we have had quite our usual number of these birds in the district. Of course it is just possible many of them migrated south when the first frost came, and they may not return, but even if they do not, we have still a fair number left. A few venturesome birds have commenced to build, but such early efforts are sure to end in disaster, for there are no signs of leaves upon the hedgerows, and until the foliage is fairly thick we cannot expect such a bulky home as a Song Thrush's nest to escape the sharp eyes of the schoolboy, and for the life of him he cannot resist the temptation of handling those beautiful blue eggs with the dark spots. When one considers the risk attached to the nesting of these large familiar birds, it is really a wonder any of them manage to rear broods at all.

The Tits are numerous and the song of the Greater one can be heard everywhere. Some may call it monotonous, but I like to hear it. It reminds one that the winter is past, even though a few snow flakes are in the air, and the March wind is anything but balmy.

Notes and Queries.

Early Blackbirds.

I found a Blackbird's nest with two eggs at Elstead, near Godalming, on Friday, Feb. 23rd. I should think this about the earliest of the season.—W. H. Doswell (Godalming).

Train Stopped by Crows.

The Paris Correspondent of the "Morning Advertiser" reports that Crows stood so thickly on the main line between Paris and Strasburg the other day, and such a slaughter was caused by the freight train ploughing through them that the train itself was stopped and a passenger train behind was held up for some time. The birds, it seems, collect in great numbers at this time of the year in the district in question—between Liverdun and Frouard, in the Meurthe-et-Moselle. They alighted on the track on account of scraps of food thrown from a dining-car and did not move when the freight train arrived.

A Fine Collection.

The late Mr. Thomas Thompson, of Winlaton, was a naturalist of some note, and during his life he got together a valuable collection of birds. The greater portion of this collection, also birds and their eggs collected in the neighbourhood of Constantinople, has been presented to the Hancock Museum, Newcastle, says a writer in the "North Mail." What will perhaps interest local ornithologists is a Reed Warbler which was shot near Winlaton. It is said to be the only Reed Warbler known to be in a collection in Great Britain. A nest of the common Reed Warbler, taken by Mr. Thompson at Blaydon, is probably novel for the district, as the bird is practically unknown in the north-eastern counties. There are also examples of a singular local variety of the Partridge, local specimens of the rare Ivory Gull, and the Bittern, and specially beautiful examples of the Great Crested Grebe, Great Northern Diver, Grey Plover, Stock-dove, Nightjar, and many other birds.

The Robin's Mistake.

Is it possible that a bird's natural instinct tends to deteriorate by contact with civilisation? A Tottenham writer supplies a story which suggests the inquiry. In a mulberry tree in the grounds of the Strand Union Schools at Edmonton, a Robin's nest has been found containing four eggs. Clearly the hen bird mistook the recent mild weather, with a treacherous thermometer at 50 deg., for the happy, happy spring time. Since then, ten degrees of frost have corrected the illusion.

The Ways of the Bullfinch.

One would not willingly kill such a beautiful bird as the Bullfinch, but in the early spring he is such a wholesale destroyer of buds on pear, plum, gooseberry, and currant trees that stringent measures become necessary. Nature apparently armed the Bullfinch with a beak expressly intended for the purpose of pecking out fruit buds, and he is a past master at this operation. Wary, too, to a degree, Bullfinches soon get to know the meaning of a gun (says a writer in the "Agricultural Economist"). This is the most effective weapon for protecting your interests against the marauders.

A Strange Triangular Duel.

A somewhat remarkable incident was witnessed at Dartmouth recently, says the "Western Evening Herald," when two Gulls were seen to attack a Hawk, which was a considerable height over the River Dart. A fierce fight ensued. The Hawk was observed to have something in its beak, but, unable to withstand the onslaught of its hungry foes, dropped the object into the river. The three birds then flew off, and a coal lumper, who had watched the aerial fight, jumped into a boat and succeeded in picking up the evident cause of the "quarrel." This proved to be a much-mutilated dead Carrier Pigeon, upon the right leg of which was a ring marked "N. 12, 1906."

"CAGE BIRDS" STUD REGISTER.

Prepared by W. SPILLMAN (Devonport).

1907.

Name and Description.	Bred by	Wins.	Nested	Hatched	No.	Remarks
No. 1.						
GENERAL CAREW. —Large wing marked buff, wonderful head and neck, good colour, trifle loose at thighs.	Self, from No. 12 pair, 1903.					
LOUIE.—Clear yellow, wonderful type, extra fine in feather, not overdone in colour, and fails slightly in head.	Mr. Smith, from his noted buff cock, and a typical yellow hen, 1904.					
No. 2.						

The above Sample Entry from **"Cage Birds" Stud Register** has been prepared by Mr. W. SPILLMAN (Devonport) to guide the younger breeders in drawing up and properly utilising this indispensable item in the breeding of pedigree or show birds. **Properly Printed Registers,** for hanging up in the Bird Room (printed on stiff card, and arranged for six pairs to each card), may be obtained from the office of CAGE BIRDS, at **2d. each,** post free; **4** for **Sixpence** or **9** for **One Shilling.** The labels as printed underneath can be supplied on better paper and gummed at back, **12** for **2d.,** post free.

CUT OUT THESE LABELS AND AFFIX TO YOUR BREEDING CAGES.

MAINLY CANARIES—continued.

ADVERTISER wishes to exchange six Canary hens, good birds, from aviary, also will sell some from 5/-.—Address, 26, Fulready-rd., Whipps Cross, Leyton.

SIX self yellow hens, crossed, good, from 2/6; typical self yellow Norwich cock, 12/6, for typical 1906 Yorkshire cock; Linnet and Goldfinch, caged from nest; good cages for sale.—Scales, 8, Regent-grove, Harrogate.

WOULD exchange Yorkshires for a good Crest cock or Crestbred hen, any colour; or exchange Crestbred cock for Crested cock or Crestbred hen; change of blood wanted.—W. R. Wyatt, 120, Wimborne-rd., Winton, Bournemouth.

VARIEGATED 1905 Crested cock, £1; green 1905 Crested cock, £1; yellow 1906 Crested cock, 15/-; or exchange either for Crested hen, 1906, or two cocks for one good one; approval both ways.—James, 4, Hinton-st., Cardiff.

I HAVE four good buff Norwich cocks and three yellows, 1906, two good buff hens, two typical Yorkshire hens, one yellow, one buff, cocks, 7/6 each; hens, 4/-; will exchange any of cocks for a typical Norwich green cock, ditto hens.—Green, Ashworth's-yard, Wisbech.

NORWICH Plainheads, giving up Fancy, exchange 11 buff hens and six cocks, nearly all colour-fed, typical birds, for half-plate camera by good maker, lens especially; or sell, hens 5/-, cocks from 10/-; or offer for lot.—C. T. Brewer, St. Hilda's, 42, Knighton Park-rd., Sydenham, S.E.

WELL-BRED Fox Terrier bitch, grand head, good in house, make splendid sporting dog, 12/6; large double breeder, all accessories, and egg mill, 8/-; prize-bred large clear yellow Norwich cock, 15/-; house moulted Goldfinch, muler, 7/6, or offers of anything (Rollers wanted), must be sent first on approval.—Lee, 35, Marshall-av., Bridlington.

ONE buff Green Cinnamon Norwich cock, 10/-, or exchange yellow Green Norwich hen; one buff marked Plainhead cock Lancashire, 12/6, or exchange good yellow Norwich hen; one buff Crestbred cock, 15/-; or exchange yellow Norwich cock; pair yellow cock and buff hen, 10/-, or exchange gold Lizard cock; no rubbish need apply; approval.—Carter, butcher, 160, Burnley-rd., Todmorden, Yorkshire.

GENTLEMAN'S solid silver Waltham lever 35/-, pair field glasses, sling, and case 16/6, pair opera glasses, plush case, 15/6, pair carvers, 10/6, lady's silver watch and chain, 30/-, gold signet ring, 10/6, gold pin in case, 10/6, gentleman's 9 ct. gold watch, 70/-, lady's ditto, 35/-, pair lace curtains, 12/6, silver-plated jelly dish, three divisions, 25/-; sale or exchange Canaries, Pigeons, Fowls, Bantams, Birds, nice Puppies.—The Stores, 81, Cobden-rd., Norwood Junction.

Mainly Foreign
To be Sold or Exchanged

THREE pairs crossbred Bantams, handsome birds; exchange for Budgerigars.—Ebbs, Cheeswick Farm, Horley, Surrey.

AUSTRALIAN Grey Parrot, good whistler and mimic, sit on finger, with cage, 10/-; or exchange.—Schooler, Paxton, Berwick-on-Tweed.

RED-CRESTED Cardinal, steady, full song, with show cage, 10/6; exchange Goldies, Linnets, Canaries.—Mills, 24, Sutton-rd., Liscard, Cheshire.

FINGER-TAME white-headed Nun (cock), 3/6; Yorkshire Canary cock, 6/-; or exchange for pair of yellow Budgerigars.—H. T. Walker, 25, Bridgegate, Retford.

TALKING Alexandrine Parrot, with cage, both good condition, 50/-, or part exchange for large high-class Norwich Plainheads; no rubbish wanted.—63, Coleman-st., Southend-on-Sea.

Miscellaneous
Sale or Exchange

EXCHANGE Swiss lever, pair Canaries (warranted new).—Wright, 15, Crossmyloof-bdgs., Glasgow.

EXCHANGE large wicker cage for Canary, any kind.—Bramley, Townsend-st., Cheltenham.

EXCHANGE two dozen phonograph records for three clear Norwich hens.—Brain, Glastonbury.

CYCLES.—Any 1907 model for a few good Canaries and cash.—10, Cavendish-st., Grimsby.

SIXTEEN long-distance Homers, 15/-; exchange Poultry, any variety.—Wm. Reid, Falkland, N.B.

CROSS Greyhound and Retriever dog, 10 months, 10/6, exchange.—W. Lewin, Oakham.

FOR Sale or exchange, prize-winning black or blue and tan Rabbits for good Norwich Plainheads; on approval.—Mein, 40, Oakfield-rd., Walthamstow.

EVEN marked smooth Fox Terrier bitch, 18 months, good house dog, ratter, exchange cock Canary or Mule.—25, Cowper-st., Luton.

SHORT distance birds for sale, or exchange Canaries or British birds.—E. Turner, 46, Wensley-st., Blackburn.

GEM air-gun, sell 10/6, or exchange for good Yorkshire cock.—A. Morton, 23, Mount Pleasant-lane, Clapton.

GUITAR-ZITHER, cost 50/-, in good condition, will sell 25/-, or exchange good pair Crests; approval.—Kett, 17, Carlyle-rd., Lakenham, Norwich.

WHAT offers for "Silver King" cycle lamp, meerschaum-amber pipe, coloured.—Holmewood, Poplars-rd., Ramsgate.

TWELVE pans, 12 hangers, 36 linings, 6 new single breeders; exchange birds; stamp reply.—Adcock, Aldergate, Tamworth.

GRAND Belgian Hares, Does, eight months, exchange cock Canaries, Goldfinches, or Linnets; approval.—Atkinson, 6, Vergette-st., Peterborough.

WALKING-STICK gun, and 20 cartridges, 10/-, or exchange anything useful.—Walker, 17, Abbey-rd., Stirling.

YORKSHIRE Terrier bitch puppy, 30/-, beauty, exchange.—Curlis, Industrial Dwellings, Newcastle-on-Tyne.

PAIR Norwich cages, cash, exchange for good ½ plate or post card hand camera, R.R. lens.—A. Orton, 21, Harewood-st., Leicester.

WANTED, offers in cage birds, for three Homer pigeons; sell 4/6; approval, deposit.—Eyes, Barness Stores, Byfleet, Surrey.

IRISH Terrier dog pup, rich red coat, long head, dark eyes, small V-shaped ears, 10/-; approval; exchange.—Eyeson, 334, Coldharbour-lane, Brixton.

SALE or exchange, small Whippet bitch, pure, for Goldfinches, Canaries, or Bicycle; sell 25/-.—Bray, Melbourne-st., Tiverton, Devon.

EXCHANGE three years "Strand Magazine" for good cock Goldfinch.—Judd, Casterton, Kirkley Lowdale.

EXCHANGE rough wire-haired Terrier, for house-moulted Siberian cock Goldfinch, or sell 15/-; approval; no rubbish.—Wright, Cwmdare, Aberdare.

SINGLE muzzle-loading gun, first-rate order; exchange for Roller cock; give little cash for good one.—8, Podmore, Knutton, Newcastle, Staffs.

THREE dozen winning Mice and cages; exchange yellow Budgerigar hens, Zebra Finches, or offers.—Morris, 1, Highfield, Ilfracombe.

EXCHANGE pair of young brown Tumbler Pigeons for pair of Crest or Lizard Canaries.—Flannery, 11, Birch-av., Brooklands, Cheshire.

PIGEONS.—Ten birds, flown 100 to 200 miles; will exchange for Canaries, or sell 25/-.—L. Catchpole, Carlton-rd., Lowestoft.

THIRTEEN CAGE BIRDS, coloured plates; offers British, or muling hen.—Johnson, 111, Heysham-rd., Southport.

GRAND Fox Terrier dog, 12 months, 15/-; exchange birds, anything.—Halsall, 35, Nelson-st., Southport.

CHAMPION Yorkshire and Norwich cocks, 7/6 each, six 36/-; ten days' approval.—Wm. Powick, Eastfield House, Dewsbury.

LADY'S 18 ct. gold new keyless watch, worth £4; exchange Crests or Cinnamons.—Lloyd, 7, Dean-st., Aberdare, Glam.

ENGLISH-MADE five-chambered revolver, perfectly new, cost 25/-; exchange to value 8/-, or nearest cash offer.—T. Amery, Crowle, Doncaster.

VIOLIN, bow, case, 19/6; heavy solid silver chain, 12/6, cost 17/6, exchange Canaries.—Hellier, 43, Sydenham-ter., Portsmouth.

WHAT offers in breeding cages for massive antique copper tea urn? Approval.—Mawson, 135, Walmgate, York.

JET Black Retriever and Spaniel bitch, 18 months, good hunter, due in season, 15/-, exchange cock Canaries.—W. Dawes, Pyebridge, Alfreton.

TWO beautiful Old English Game pullets, laying, and cockerel, 12/6, exchange cock or hen Canaries.—W. Dawes, Pyebridge, Alfreton.

RABBITS.—Belgian Does, Bucks, or Dutch, splendid strains, winners, exchange Canaries and cages.—Bolton, Shotton Colliery, Durham.

WILL exchange 20 in. all wire breeding cages for drapery, hardware, or anything useful, or sell at 4/-.—McDonald, Buchanan-st., Glasgow.

EXCHANGE dozen new Edison records for pair Canaries and breeding cage, offers.—West, Grocer, Didsbury.

FOR Sale or exchange for Norwich or Goldfinches, bird catcher's outfit, complete, 10/6, or offers.—Bentley, Sherwood-st., East Kirkby, Notts.

EXCHANGE youth's violin and bow, copy of Antonius Stradivarius, value 7/6, for Norwich cock Canary.—Young, Ashby-de-la-Zouch, Leicestershire.

EXCHANGE fountain pen, 2,500 Ogden's cigarette cards, offers British birds.—Edwards, 14, Market-st., Carnarvon.

FOUR clinking Show Homer cocks, fit to win, exchange anything useful; approval both sides.—Hales, 101, Crompton-st., Farnworth, Bolton.

EXCHANGE three pairs Pigmy Pouters, Hammonds' strain, for Yorkshire Canaries.—E. Smith, 29, Hartington-st., Loughborough.

NEW ash fishing rod, three joints, two brass reels, exchange pair hand-reared Bullics.—Aviaries, Farm-lane, Street, Somerset.

LARGE oil cooking stove, cost 63/-, splendid cooker, useful for country, 20/-, exchange, 25/-.—R. Carr, South-rd., Wimbledon.

ELECTRIC bell, battery, etc., complete 7/-; bicycle saddle, 3/-; exchange hen Canaries or Bullfinches.—Pickett, Lorne-rd., Dorchester.

EXCHANGE, Wilcock's and Gibbs' sewing machine, perfect condition, for Canaries, or sell.—29, Rose-neath-pl., Oldfield-lane, Leeds.

"CAGE BIRDS," 1906, complete, exchange yellow Norwich hen or two cock Redpolls.—Stannard, 91, Kensington-av., Manor Park, Essex.

WHITE Wydat Cockerell, Payne's, make winner, 10/6, or exchange St. Andreasberg Roller cock.—Arnall Parker, Grandborough, Winslow, Bucks.

WILL exchange a well-bred wavy coated Retriever bitch, four years, for three pairs Borders.—Sheppard, Dailby, Ayrshire.

HANDSOME liver Spaniel dog, 2½ years, retrieve to hand, 12/6, exchange cycle wheels or Canaries.—Williams, Pendre, Builth.

EXCHANGE joiner's tools for Canaries, Linnets, British birds, cock Mules.—Emmett, 220, Thistle-st., Glasgow.

LADY'S cycle, good order, free wheel, new tyres, clear rims, £3 10s.; Canaries wanted.—Cameron, Cycle Depot, Maryhill.

EXCHANGE pair real stag carvers for two cock Bullfinches or two hen Canaries.—Royles, 230, Beet-st., Sheffield.

EXCHANGE six ivorine-handled knives or pair carvers for one cock or three hen Canaries.—Herbert Marsden, Cutlery Manufacturer, 175, St. Phillip's-rd., Sheffield.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Halfpenny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together and counted as one Advertisement.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

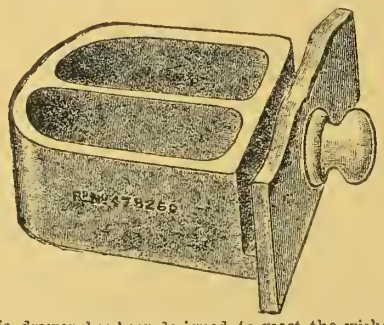
PARR'S POTTERY

NEST PANS, DRINKERS, FOUNTAINS, BATHS (Oval, Round and Square).

"Duplex"

Cut Partition Drawer.



This drawer has been designed to meet the wishes of Breeders so the foods can be separated instead of mixing together. Thus having one drawer instead of two. Made in two sizes.

Mr. C. A. House, Claude St. John and J. North all say it is a good idea.

Wire door falls into the groove and is not in contact with food.

JOHN A. REECE, Cage Maker.

Established 31 years. Awarded 28 medals and diplomas. Still at the top. There was nothing at the Palace to beat my goods for quality or price. Send for sample, and see the astounding value I give in breeders. All fronts have four cross bars, nest pan doors, wood and wire slides, sand trays, hoppers, all china fittings, black outside, blue inside, 18in. 3/-, 20in. 3/6, 24in. 4/6, 30in. double 5/6, 36in. 6/6, 48in. three-compartment 9/- My registered sanitary nest box and bracket, 3/- per dozen. Swansdown nests, 1/4 dozen, post free. Best quality cage fronts, 12 by 12, 3/- dozen; others equally cheap. Box cages, fully fitted, 10in. 14/-, 12in. 17/-, 14in. 19/6 dozen. Illustrated list, stamp.—Jockey Wire Works, Colston Yard, Bristol.
JOCKEY WIRE WORKS.

COOPER'S COLORINE

cannot be equalled as a sanitary washable water colour for aviaries, cages, etc.; no red mite can live where it is used, perfect disinfectant and harmless, equal to the best oil paint at less than a quarter the price; egg-shell blue, green, salmon, and white; numerous testimonials from leading fanciers; sample tin, sufficient for 20 cages, 1/3, 2lb. 2/-, 4lb. 3/-, carriage paid.—H. Cooper, Decorator, Luton.

Egg Mills, Stock Cages, Wires,

etc., best egg mill in the world, in use by Judges Bexson, Battye, Robson, Barnes, Irons, etc., price 2/6, two 4/6. All undermentioned cages made by practical workmen, and not chucked together; single breeding cages, about 21in. long, 18in. high, 9in. wide, 2/8; double compartments, nearly twice size, 5/-; large flight cages, 5/6; Thrush or Blackbird cages, 3/-; cottage shaped tops, 4/-; Lark cages, 10d. and 1/-; bow fronted, 1/3 and 1/6; Linnet cages, 10d., 1/-, and 1/2; Goldfinch and Bullfinch, all wire cages, beauties, 1/6; grand made box cages, sand drawers, etc., 1/6; enamelled, 1/9; all kinds fancy hanging up cages, 2/6, 3/-, 4/-, in brass, 4/-, 5/-; canary and hemp grinding mills, 1/6; best cage wire, 4d. lb., 7 lb. 2/-, 14 lb. 3/9; extra good flat bars, ¼in. and ⅜in. mesh, 1/- dozen, 9/- gross; wire fronts made to order, 6d. square foot; send stamp for catalogue everything.—Established 1879.—J. Sandiford, Bird Specialist, Preston, Lancs

ARE YOUR BIRDS READY?

Have you got the correct Nesting Material?

DODGE'S FICTITIOUS COW HAIR

is the only material with which birds will build a natural nest. They build as soon as you give it to them, and being a non-conductor the eggs are kept warm when the hen is off.

Try it and you will see a nest.

2.6 per lb., sufficient for about 90 nests. ½ lb. sample, 1/-.

MORTEN DODGE, M.P.S.
Manufacturing Chemist,
STRANGEWAYS, MANCHESTER.

THE CHALLENGE BREEDING CAGES.

Best pine boards, planed inside and out, black enamelled outside, blue inside, sliding partitions, sand trays, and seed hoppers, best quality loose wire fronts, made with punched bars, 18in. 2/-, 20in. 2/6; double, 33in. 3/9, 36in. 4/3; 9in. back to front, 15in. high; singing box cages, 1/6; cages and fronts made for the trade.—Henry Morris, 57, Cape-hill, Birmingham.

BOARDS FOR CAGE MAKING.

All sizes cut and planed ready for nailing together. Also cage fronts made to fit same. Nothing but sound boards sent out. Stamp for reply.—Joshua Naylor, Cage Maker, Police Street, Brighouse.

RINGS. Aluminium closed Canary Rings (adopted by B.R.C.C.), year, and numbered consecutively, 4/-, 100, 6d. dozen. Improved Rings, to open, 2/6 half gross, 6d. dozen.—Hughes, Hampton Hill, Middlesex.

Have You yet seen it? . . .

My New Post Free Catalogue.

32 Pages without Cover, with One Hundred and Six Illustrations.

Of Aviaries, Cages, and all Appliances for the Birdroom, together with Foods, Medicines and all Seeds, etc., suitable for all Cage Birds. If you have not already sent for one DO SO AT ONCE, it will save you money, vexation, disappointment, it being an up-to-date Catalogue, and not a three or four page circular bill (the so-called illustrated lists and catalogues).

44, Lambhill-st., Paisley-rd., Glasgow. March 14th, 1907.—I received breeding cage from you in good condition, and I am perfectly satisfied with it in all ways.—T. Meadowcroft to W. Rudd.

Very pleased.

83, Great Portland-st., London, W. March 11th, 1907.—The articles ordered received in good condition. I am very pleased with cage sent. Many thanks for prompt attention.—C. Newett to W. Rudd.

Beverley. March 11th, 1907.—Egg mill received quite safe. It is a very good one for the price.—B. Warnes to W. Rudd.

2, Victoria-ter., Dullatur. March 8th, 1907.—The breeding cage safe to hand, and I am pleased to say all is intact. I am thoroughly pleased with it, and must thank you for your kind attention.—J. C. Macfarlane to W. Rudd.

27, Lintaine-grove, West Kensington, London. March 3rd, 1907.—I have received bird, cage, and contents. I am very pleased with same.—J. W. Wilson to W. Rudd.

Westerholme, Ilminster. March 13th, 1907.—The cage and Siskin arrived safely, and are both satisfactory.—F. Bennet to W. Rudd.

W. RUDD, The Bird Specialist, Norwich.

THE HYGIENE OF BIRD KEEPING.
By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.
Price 1-1, post free from CAGE BIRDS Offices,
154, FLEET STREET, LONDON, E.C.
OPINIONS OF THE PRESS.
LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."
COUNTRY LIFE: ". . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

MEDICINES.

CANARIES plucking young.—A remedy, never known to fail: prevents sweating; 1/2, free.—Seal, 15, Knoleshill-cres., Lewisham.

BRONCHORINE.
Ideal tonic, cold, wheezing, asthma, brings birds into breeding condition, invaluable for young; original testimonials.—Apply, Crawley, 11½, Radford-boulevard, Nottingham, 9d., 1/6, and 3/-. "Forward 1/6 bottle Bronchorine. Find it excellent tonic.—211, St. Albans-rd., Watford. March 14th, 1907."

PANNASSINA.
A medicinal preparation for Canaries and all kinds of cage birds, prevents and cures asthma, wheezing, loss of song and all diseases caused through damp and cold; is an excellent stimulant, and takes the birds easily through their moult. This speciality has built up a 30 years' reputation entirely on its own merits, invariably effecting a cure after every other remedy has failed. In 6d. and 1s. tins, postage 1d. extra. If you cannot obtain it from your tradesman, apply direct to W. J. Hammond, 19, Anstey Road, Coldharbour Lane, Camberwell, London, S.E. Agents wanted.

Open Linnet singing cages, 8d. each. Grand talking Parrot, amusing pet, 30/-, worth £5; approval.—Baker, Herbert-st., Bedminster.

JAMES CLARK,

the original Linnet King, has for sale house moulted cock Linnets from 5/- to 7/6 each; contest birds from 15/- to £1, that will sing in any window under the minute; red-breasted Linnets, in full song, with cage, from 4/- each, taught by the Newtown champion. Those who have purchased a bird from me, if not satisfied, can return it back and their money returned. I have no connection with any other Linnet firm. Beware of imitators of Linnet King, as I am the only original Linnet King in Yorkshire.—Apply, 36, New Cleveland-st., Newtown, Leeds.

HARRY ALLEN.

Same as last week, 1st and 2nd again. I have opened the eyes of everyone with winning all before me, and no wonder, for I keep nothing but the very best; big fine healthy cock Linnets, well pencilled, stand well, 2/6 and 3/-; extra picked birds, very tame and sure Mule breeders, real gems, 3/6 and 4/- each; no rubbish, fit for show. Cock Linnets, singing grand, in a polished singing contest cage, with a packet of my special mixture and instructions how to feed, 4/6 the lot. Young house moulted Linnets, singing hard, finger tame and fit for show, 7/6, 8/6, 10/6 each; including singing cage birds, specially trained for contests, 15/-, will soon make a name for their owner. I have also a few champions for sale; send stamped envelope for prices. Those wishing to know how to make Linnets sing at one another with their wings down, how to moult, how to train, and win coutests, how to make birds tame, should send stamped envelope for particulars of my book; a real gold mine to Linnet singers. For instance, look at my success with it. Four packets of my special mixture, 1/-. Contest cages, 1/6 each, 7/6 half dozen. Cock Bullfinch, in show condition, singing gaslight and daylight, 5/6. "130, Brigg-bldg., Norgate, Almondbury. Dear Sir,—I received the bird quite safe, and wish to thank you for your straightforward dealing. The first bird I received from you is in full song, and quite tame.—A. Hallar to H. Allen." I will forfeit £25 if I have ever put a false testimonial in CAGE BIRDS. I am receiving letters from satisfied customers every day. Send at once. (See Singing Results.)—Harry Allen, 42, Brown-hill-eres., Harehills-lane, Leeds.

GOLDFINCHES. GOLDFINCHES. GOLDFINCHES.

Real beauties, 2/6, 3/-; selected for showing, 3/6, 4/- each; hen, 1/-; Goldfinch cage, 1/8; Linnet cage, 1/3; Lark cage, 1/-.—Matt. Hopkins, Bird Specialist, 38 and 41, Fylde-st., Preston, Lancashire.

Can guarantee all breeders and fanciers the same high satisfaction I have given the past 12 years in judiciously matched prize-bred pairs Plainheads, 8/6 to 40/- pair; all cold-room bred, and willingly on approval; inquiries invited.—H. Amiss, Exhibitor and Exporter, 69, Ashby-st., Norwich.

TO breeders in outdoor aviaries.—Two good yellow Norwich cocks, one 1905, one 1906, both have been outdoors all winter, 8/6 each; also two cock Goldfinch Mules, one 1905, 7/6, one very large variegated, one 1905, unfed, but if fed should win in good company, 17/6; also a 33 in. Crystal Palace aviary, complete, in good condition, 7/6; full particulars on application.—Hills, Thornton-rd., Potter's Bar.

NORWICH—continued.

HIGH-CLASS Norwich cocks, in full song, 6/-, 7/6, 10/-, 12/6 each; hens, 3/6, 4/6, 5/6, 7/6, 10/- each; pairs, matched for breeding, 8/6, 10/6, 12/-, 15/- pair; stamp reply; money returned if not approved.—Stewart's Wholesale Earthenware Stores, Surrey-st., Norwich.

POWICK'S Champion Norwich, the same strain as the winners at all leading shows, cocks 7s. 6d., 10s. 6d.; hens 5s. 6d., 7s. 6d. each; pairs, mated to breed winners, 10s. 6d., 15s. 6d., and 20s. per pair; no rubbish; ten days' approval.—Wm. Powick, Eastfield House, Dewsbury, Yorks.

WILLIAM JUDD, Midland Counties Aviaries, 120, Belgrave-gate, Leicester. The largest stock of high-class Norwich Canaries in the Midlands; cocks, in full song, 5/-, 5 6; orange yellows, 7/6 and 10/- each; good healthy hens for this year's breeding, 2/6, 3/-; orange yellows, 4/- and 5/- each; pairs, properly matched for this year's breeding, unrelated, 7/-, 8/6, 10/6 and 15/- pair. Most of these birds have been bred in outdoor aviaries. This is no flattering advertisement, but genuine, with 20 years' references. With my business extending so much, I have had to take larger and more convenient premises. Please note change of address.

F. EATON.

Owing to leaving town, must greatly reduce my stock of birds and cages; Norwich cocks from 8/- each.—Address, 147, Freedom-rd., Walkley, Sheffield.

CHAMPION NORWICH.

Own breeding (1906); several pairs, rare type, quality and substance, from winners, nothing more reliable, prices £2, £3, £4.—Aitchison, 24, Fettes-row, Edinburgh.

E. F. Gowing's Crystal Palace Prize Strain

Well-matched pairs, 25s., 35s., 45s.; some grand hens, 7s. 6d., 10s., 15s.; all related to my winners of firsts, specials, and other awards at Palace Shows, in open classes. Not showing this season. No reserve; approval with pleasure.—28, Castle-rd., Colchester.

CHAMPION NORWICH.

Own breeding. Three yellows, three buff cocks, unflighted, grand type, 15/- each, worth double; few useful cocks, 10/-; hens 5/- to 10/-; guaranteed bred from same stock as my winners for years; approval.—W. Bowyer, Gladstone-st., Leek.

NORWICH SONGSTERS, ONLY 5 - EACH.

I have a large stock of Canaries. Every cock I warrant singing. Write or call and see them for yourselves. Norwich cocks from 5/- to 6/- each; hens from 3/- to 3/6 each. Yorkshire cocks from 7/- to 8/- each; hens from 4/- to 5/- each; all bred from winners; cash or deposit.—John Mace, Bird Specialist, 8, Doncaster-rd., Barnsley.

STILL SUPPLYING,

with the highest satisfaction, large healthy yellow or buff Norwich hens, 4/-, 4/6, 5/6; variegated hens, 3/6, 4/-; few smart Yorkshire hens that will do you good at 4/3, 4/9, 5/6; typical Norwich or Yorkshire cocks, 6/6, 7/6, 8/6, ready to nest, and honestly worth double; approval anywhere; see last week's advertisement.—R. Hanford, Osmaston-rd., Derby.

CHAMPION NORWICH.

A grand stock of Plainhead Norwich, fed to perfection, pairs from 10/-, cocks from 6/6, hens from 4/-, also a few cinnamons; approval; inspection invited.—W. Growdridge, Clarendon-rd., Hinckley.

A. C. BURN,

14, Fabian-rd., Fulham, London, has a few Norwich Plainheads, clear and variegated, buff hens and cocks, at 10/- to 20/-, also few matched pairs, 20/-, 25/-, 30/-, all bred from winning strain; can be inspected, or sent on approval, cash or deposit.

WRIGHT AND SON,

84, Heath-rd., Norwich, winners of hundreds of money prizes, also medals, etc., in open competition at Crystal Palace and leading shows. Have some grand stock in Norwich Plainheads for sale; pairs, matched to breed show birds, 10/6, 12/6, 15/- and upwards; prize-bred cocks, 7/6, 10/6 to 20/-; hens, 3/6, 5/6 upwards; all in good breeding condition; approval.

NOTICE, CALL OR WRITE

and inspect my Norwich. I have a splendid collection in all colours, except greens, and every bird is in the primest condition and feathered like silk; cocks, in full song, 7s. 6d., 8s. 6d., 10s. 6d.; hens, 4s., 4s. 6d., 5s., 5s. 6d.; all on seven days' approval; P.O. or deposit; note, inspection invited any time.—William Shaw, 97, Essex Road, Islington, London, N.

JOHN C. BARNES.

Having selected my own breeding stock, can spare few choice birds, well up in substance, true type, and of grand depth of colour, winner of silver cups 1901, 1902, 1904, 1905, 1906., price reasonable; approval; inspection cordially invited; stamp reply; pairs properly matched.
149, Duncombe Street, Walkley, Sheffield.

WICKS BROS., NORWICH,

offer grand pairs Norwich Plainheads, selected and matched for immediate breeding, 8/6, 10/6, 12/6, 15/-, 21/- upwards; ditto, cocks, 5/6, 6/6, 7/6, 10/6 upwards; hens, 3/-, 4/-, 5/-, 7/6 upwards. All on approval; quality unequalled compared with prices. Send for current price list and catalogue of live stock and all appliances, post free. Postal and Telegraphic Address: Wicks Bros., Norwich.

SILK'S CHAMPION NORWICH.

My name and fame as breeder of Norwich Plainheads is so well known to every fancier that my birds need no paper recommendation. I breed to sell. Most of the leading champions have been bred and sold by me, my vast business having been built purely upon recommendation, not on paper bounce. If you were disappointed last year with Norwich purchased elsewhere, try a pair from a strain of many years' standing. Success certain. Every pair on approval, money returned if unsatisfactory, or deposit with Editor. Satisfaction guaranteed. Champion pairs, 15s. 6d., 20s. 6d., 25s. 6d., 30s. 6d. per pair; some tip-top cocks and hens, yellow or buff, 7s. 6d., 10s. 6d., 12s. 6d., 15s. 6d. each. Don't risk unreliable strains, but send to the fountain head, or a season's work may be wasted. Remember, all on approval, willingly.
Judge A. E. Silk, *THE AVIARIES,* **Whitstable.**

CHAMPION NORWICH.

Having selected my breeding stock, have a few pairs to part with, from 20/-; no odd hens; same strain as my winners cups, medals, etc.—Boydon, Peckham House, Peckham, S.E.

CHAMPION NORWICH.

E. CODLEY, Rishton, nr. Blackburn,

Breeder & Exhibitor, has a few choice birds for sale. Also **Cinnamons.**

LOOK HERE!

I am anxious to remind you that I have the best stock of Norwich Canaries ever seen in one bird room, having over 500 pairs to select from (including the whole stocks of two noted exhibitors). I can offer you many this season's winners and pairs properly matched for breeding winners. I shall be pleased to send you any birds on seven days' approval, carriage paid. I yearly sell many thousands of birds, and give every customer satisfaction. I guarantee to please you if entrusted with your order. I am now offering exceptional good value in typical Norwich cocks, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, and 25/- each. Hens, 4/-, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6, 12/6 each. Matched pairs, 8/6, 9/6, 10/6, 12/6, 15/-, 17/6, 20/- upwards. I receive many thousands of unsolicited testimonials, of which the following are samples:—"77, Belmont-st., Oldham, March 2nd, 1907. Received bird quite safe. I am more than pleased. It is worth a lot more than I paid you for it. Your honest and straightforward way of dealing is a credit to you. I can confidently recommend you to all my friends.—W. Mitchell, to Miss Storey." "36, Howden-rd., North Shields, March 4th, 1907. Received birds all right. There is every credit due to you. They are a first-class pair—exactly what I wanted. I shall recommend you to all friends.—R. Miller, to Miss Storey." "61, King-st., Cwm. Received Norwich hen in splendid condition. Many thanks for same and your prompt attention.—A. Giles, to Miss Storey." "Clyde House, Durham, March 3rd, 1907. I have instructed Editor to forward you the money for the birds received, which are quite satisfactory, etc.—J. Gregor, to Miss Storey." "44, Hamelton-st., Gorvan. Received bird safe, with thanks. I have seen many birds from England, but never such value as those sent by you. Wishing you every success.—W. Hayes, to Miss Storey." "27, Lenice-st., Penzance, March 2nd, 1907. Received birds safe. Exceedingly good type. Highly satisfied.—J. Bounder, to Miss Storey." "Castleford, March 2nd, 1907. Bird arrived safe. It is a grand one. I am highly pleased with it.—R. Fenn, to Miss Storey." "Lauriston, Falkirk, March 2nd, 1907. Bird arrived. I am highly pleased with it. Many thanks for your prompt attention to the order.—W. Cooper, to Miss Storey." "2, Windsor-ter., Kilbowie, March 3rd, 1907. Received bird in the pink of condition. I am well satisfied with the way you transact your business.—J. Garseadden, to Miss Storey." I have thousands similar to the above all open for inspection. New illustrated price list post free. Travelling cages, 2d. each. I send all Canaries, carriage paid, on seven days' approval, at my own risk.—Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

LATEST OPINION OF MACKLEY BROS.' BIRDS.

"High Street, Uppingham, Rutland. Jan. 12th, 1907. Dear Sirs,—The two Birds arrived safe, in the PICTURE OF HEALTH; they are the BEST TYPE of Norwich Plainhead I ever saw. I am HIGHLY DELIGHTED with them. I shall certainly recommend you to all I have the opportunity of so doing. I never had the favour done me from any one FIRM but yours by sending birds on approval without the Deposit System. Trusting the Firm of MACKLEY BROS. may live and reign for the sake of their customers.—Yours faithfully, J. Waddingham to Mackley Bros."

Postal and Telegraphic Address: **MACKLEY BROS., (Jacob Mackley), NORWICH.**

All Birds on approval or Deposit,
Satisfaction Guaranteed.

73, KNOWSLEY ROAD, NORWICH.

THE GREATEST BARGAINS ON RECORD

Can spare the following champion Norwich Plainheads, at only one-third their value and cost prices; all birds cold-room bred and in perfect health and high breeding condition; secure these now, as they will not be offered again at anything near so cheap. They comprise the following:—1905-bred, extra large, clear yellow cock, Baker's strain, real gem, good in wings and tail carriage, full of colour, champion stock bird, will take some beating, price 30/-; 1906-bred, clear yellow cock, bred from two well-known champions, rare size, stout, and full of quality, Cook's strain, real topper, price 25/-; another 1906-bred, yellow cock, Vardy's strain, beautiful type and colour, price 21/-, cost £2 2/- month ago; 1905-bred, massive variegated yellow cock, champion stock bird, good in type, splendid bird, price 20/-; 1905-bred, monster, clear buff cock, extra stout and cobby, nice frosting, nicely carried wings, good stock bird, a regular stormer, and can win at any show, lowest price, 25/-, not quarter his value; 1906-bred, clear buff cock, Beardall's strain, equal to above bird in all points, price 21/-; probably the best ticked buff cock out, this bird is of ideal type, full of quality, rare size, real slasher, Irons' strain, price 20/-, a bargain to anyone; 1905-bred, clear buff hen, Sandiford's strain, she is very stout, beautiful frosting, breeder of great winners in 1906, price 12/6, cost 30/-; 1906-bred hen, buff, Vardy's strain, standard type and a clinker all round, price 10/6; large clear yellow hen, Eckersley's strain, good size, type, tight in feather, 1905-bred and breeder of four great winners at three leading shows, price, real lowest, 15/6; another, clear yellow hen, Booth's strain, good size, type, and quality, free breeder, bargain at 10/6; also others equally cheap, according to their quality. Hundreds of winning birds supplied by me. Many large exhibitors have had Norwich from me just lately. Numerous testimonials received, which proves the quality of stock I send out. Read the following, selected at random:—"Hope-ter., Child's-hill, N.W. March 15th, 1907. Sir,—Bird to hand quite safe. It is a very nice bird for price; good head, and nice quality. Believe me, yours, W. Orme." "Newtown, Bedworth. March 14th, 1907. Sir,—I received ticked yellow Norwich hen safe this morning, and as I am well satisfied I am sending P.O. 10/6 for her. She is in grand form.—Yours, Isaac Jaques." "16, Museum-rd., Oxford. Sir,—The birds arrived safely, and am very pleased with them. Although they were 24 hours travelling, they seemed as fresh as paint on arriving. I am very pleased with my bargain.—Yours, A. E. Stock." Buy the right type and breed your own winners. First orders get any of above bargains.—Address, Geo. Cubley, 3, Standard-ter., Long Sutton, Lincs.

EXCEPTIONAL FINE Norwich . . Plainheads.

Matched Pairs, true type and full of quality, **50/-** per pair upwards. **Grand typical Norwich Plainhead Hens, 30 -** each upwards, sent on approval. **Prize Bred Pairs** from **15 6.** Approval.

NOT WHAT WE SAY, BUT WHAT OUR CUSTOMERS WRITE.

Langdon Villa, West-st., Bromley, Kent. February 22nd, 1907.—The pair of birds arrived safely yesterday morning. I must congratulate you upon the exceptionally fine way in which you have turned them out, and thank you for your very kind and courteous letter, advice, and general treatment of the transaction. I like your method of business, and it is a pleasure to find someone in Norwich who is not too busy to attend to his customers in a kind and courteous spirit. It goes a very long way, at any rate with me, and I shall not overlook you when I am buying again.—Yours faithfully, F. E. Wright to Mackley Bros.

All Fanciers should write for our Catalogue, sent post free.

Schoolmasters, 12s. 6d., 15s. 6d., 18s. 6d., 21s.; inspection invited any time.—William Shaw, 97, Essex Road, Islington, London, N.

F. WAGNER,

Importer of Hartz Mountain Roller Canaries; wholesale only.—No. 9, Chamber-st., Leman-st., London, E.

HARTZ MOUNTAIN

Roller cock Canaries, direct from Hartz, beautiful birds, only 3s. 9d. each; 21s. a stick, try one.—Varney, Stratford.—"The Elms, 18, Whitehouse Loan, Edinburgh, January 1st, 1907.—Hummell arrived safely, and sings lovely; it is a pretty bird, and gives satisfaction.—N. Turnbull."—"January 2nd, 1907.—Birds arrived, are singing well.—R. M. Lee, 79, Mill Street, Crewe."—"Broom, Newton Mears, Glasgow.—The birds arrived in good condition; I am well pleased with such value.—J. Broom."—"January 2nd, 1907, 32, Easson Road, Darlington.—Bird to hand. I like the song wonderfully well, and thank you for your prompt delivery and attention to my instructions.—H. Hutchison."—Send all orders to Varney, Stratford, London.

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll, vibrating hollow roll, and charming water bubble roll: one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London. Export a speciality. "The Schools, Overton, Ellesmere.—Hummel arrived, it at once commenced to sing—yes, a song worth listening to. It is the most exquisite songster I ever heard—decidedly a perfect Roller. I may say I never expected such perfection; they are worth all you charge for them. I must thank you for your courtesy, and shall be able to recommend your firm to those who require birds and not rubbish."—F. Robbins, to Varney, Stratford, London, Sole Proprietor and Wholesale Roller Canary Importer and Dealer.

HARTZ Mountain Roller . Cocks .

ALL IN FULL SONG,

and Hens, both Imported and Home-bred, in the finest breeding condition. I have the Largest Collection of **Choice Pedigree Roller Hens** ever got together in one lot. They comprise pure Seifert and True Hens, and I can honestly recommend these to all breeders wanting Reliable Breeding Stock to produce the best money can buy. You can give 10/6 or more, and cannot get better blood or stock. Can be seen.

IMPORTED Trained Cocks, **8/6, 10/6, 12/6, 15/-, 20/-** and upwards; Hens, same strain, **3/6** and **5/-** each, pairs **10/6. 15/-, 20/-.** All on seven days' approval, cash or deposit.

HARTZ SINGING COCKS **6/6**; Extra selected, with better notes, **7/6**; pairs, **9/6.** Strong Hens **2/3** each.

Home-bred (guaranteed), Trained Trute and Seifert Cocks, **10 6, 12/6, 15/-** and **20/-** each; Hens, guaranteed same strains, strong, healthy and in the best of breeding condition, **4/6 5/-** each. These have been purchased direct from the breeder and trainer, and can be recommended. Remember, it is no use breeding from good Cocks and common Hens if you want good results.

Untrained—Strains unknown, Cocks **5/6, 6/6, 7/6**; Hens, **3/6.**

Full printed instructions, how to keep in health and song, sent with every bird as for the past 30 years. Beware of copyists and their "catch" methods.

Norfolk-pl., Nottingham. March 16th, 1907.—The birds arrived quite safely, and am very satisfied with same. The Roller soon started to sing, and is a very nice bird.—F. Warwick to W. Rudd.

Could not, etc,

6, High View-rd., Upper Norwood, London, S.E. March 11th, 1907.—I am delighted with the German hen you sent me. I could not have chosen one myself more satisfactory.—C. Dowell to W. Rudd.

1, Sion-pl., Cwmbach. March 15th, 1907.—I received the bird safe, and am well satisfied. He started to sing the first night it arrived.—P. Pugh to W. Rudd.

23, Hill-st., Andersloa, Glasgow. March 15th, 1907.—The bird arrived quite safely, and in first-class condition. I am very pleased with it. It sings beautifully.—T. Murray to W. Rudd.

If you want to know about these beautiful and Interesting songsters, send for my book
'Profitable Canary Breeding as Practised in Germany'
By Albert Rettich, Esq., author, breeder, and judge of the leading singing contests. Price 9d., or in larger type and gilt cover, 1/3; to be obtained from the publisher and sole owner of copyright, W. Rudd, or from the office of "Cage Birds."

All on approval. Guaranteed the best value ever offered in Yorkshires. See my Advertisement on page 273.

W. RUDD, The Bird Specialist,
NORWICH.

A REAL Live . . . Question: IS IT A BIRD YOU WANT?

If so, yours is a want that I can best supply. Suppose we have a little chat between ourselves as buyer and seller. All you need do is to send me a description of the kind of bird you want, and I can then select from my enormous stock just the bird that will meet your requirements.

The price I shall ask you to pay for it will be less than its true value, and to prove my statement, I am prepared to send you a bird for a week's trial, and if at the end of the week you want it exchanged for another, or your money back, I shall be willing to exchange it or return your money. While I make this offer in all my advertisements, it is surprising how few of my customers wish to take advantage of it.

Since the Editor of "Cage Birds" acknowledged the receipt of several hundred testimonials on March 9th, I have received hundreds more all filed for inspection at my office. I have only given one example this week. Pressure of business prevents me giving more.

Have Paid more for Nondescripts.
59, Hunter's-rd., Newcastle-on-Tync. March 16th, 1907.—I have to acknowledge with thanks the receipt of Yorkshire hen Canary, which is unsurpassed for the money, having paid more for nondescripts when commencing in the Fancy. Thanking you for your prompt attention and honest dealing.—Yours faithfully, Geo. M. Carins to E. Taylor.

Yorkshire Cocks.
Clear Yellow, 6/-, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, 25/-. Clear Buff, 6/-, 7/6, 10/-, 12/6, 15/-, 17/6, 20/-. Ticked or Variegated, 5/6, 7/6, 10/-, 12/6, 15/-, 20/-. Cinnamon Ticked, 6/6, 7/6, 10/-, 12/6, 15/-, 20/-

Yorkshire Hens.
Clear Yellow, 4/-, 5/-, 6/-, 7/6, 10/-, 15/-, 20/-. Clear Buff, 3/6, 4/-, 5/-, 6/6, 8/6, 10/-, 12/6, 15/-. Ticked or Variegated, 3/6, 5/-, 6/-, 7/6, 10/-. Cinnamon Ticked, 4/-, 5/-, 7/6, 10/-, 12/6, 15/-. Pairs properly matched for breeding Yorkshires, 10/6, 12/6, 15/-, 21/-, and upwards.

J. SANDIFORD, Canary Breeder,
PRESTON, LANCS.

POSTAL ORDERS PLEASE.
Owing to the new Post Office Regulations respecting the use of stamps upon Postal Orders, we are reluctantly compelled to state that in future our rule re **sending Postal Orders as far as possible instead of stamps** *must be strictly enforced. Advertisers unable to obtain Postal Orders must remit an extra halfpenny with every four penny stamps.*

NOTICE TO SHOPKEEPERS
and dealers.—I can supply you with grand long Yorkshires at wholesale prices; thousands in stock; write for price and particulars.—Joe Thomas, Amblerthorn, Halifax.

COWGILL'S YORKSHIRES.
Birds that I have sold have won over 40 1st prizes this season in the keenest of competition, which is proof of their quality. I have still some good ones for sale, for show, or stock; matched pairs from 15s. to 50s., cocks from 8s., hens from 7s.; approval; cash or deposit; stamp reply.—115, Washington Street, Girlington, Bradford.

LET'S SEE.
I feel sure that I have the birds you are looking for. I have many hundreds of upstanding Yorkshires of the correct type, standard length, tight in feather, exactly the birds you want to breed with. I shall be pleased to send you any of my birds carriage paid, on seven days' approval. I guarantee every customer satisfaction. Tight-feathered upstanding Yorkshire cocks, in full song, 6/6, 7/6, 8/6, 10/6, 12/6, 15/- each. Racy Yorkshire hens, 3/6, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6 each. Properly matched pairs, 8/6, 10/6, 12/6, 15/-, 17/6, 20/- per pair. A few winners at reasonable prices. Send me an order; it will convince you and your friends that I give the best value money can buy. Just read one or two samples of unsolicited testimonials:—"Longwith, near Mausfield. March 8th, 1907.—I beg leave to thank you for the splendid bird you have sent me. Its quality is superior to any bird I have ever bought before. Thanks for prompt dispatch.—J. Padier to Miss Storey."—"Delight Bank, Dipton. March 8th, 1907.—Received Yorkshire hen safe and well. I am more than satisfied with it, and will recommend you to all my friends.—W. Cransbon to Miss Storey."—"Owen-st., Atherston. March 8th, 1907.—Kindly accept my testimony as to your straightforward dealings in your business. Mr. Cooper sent for two pairs of your birds, one for himself and one for me. They have turned out excellent. I shall recommend you with confidence to anyone requiring a good bird. Wishing you every success.—H. Charnell to Miss Storey."—"93, Wisemoor, Walsall. March 8th, 1907.—Bird arrived in excellent health. No man could wish for a better bird at working men's prices. Wishing you every success.—J. Cannell to Miss Storey."—"Dundonaldden, Cardenden, Fife. March 8th, 1907.—Thanks very much for the bird received to-day in the best of health. Good shape, and an excellent songster.—J. Pollock to Miss Storey."—"1, Ann's-rd., Heeley, Sheffield. March 8th, 1907.—I am greatly pleased with the bird you sent me. I send you order for two more, as I am sure you are worth patronising for your straightforwardness.—C. Wood to Miss Storey."—I have hundreds of similar letters open for inspection, and you will prove the same satisfaction yourself if you favour me with your order. I send all my birds on seven days' clear approval, carriage paid, at my own risk; new illustrated price list free; neat travelling cages, 2d. extra.—Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

YOU WANT THE BEST VALUE OBTAINABLE.

I not only endeavour to give it, but am in such a position that I can give better than is procurable elsewhere. A trial proves this fact.

The following up-to-date expressions of satisfaction prove it. These are not saved up examples, nor yet isolated cases.

Pleased with Selection.
17, Waverley-rd., Plumstead, Woolwich. March 13th, 1907.—The birds arrived to-day in the pink of condition. I am highly pleased with your selection, and if at any time I require a further supply, I shall certainly patronise you.—J. Truscott to W. Rudd.

Can honestly recommend, etc.
19, Potter-st., Newport, Mon. March 17th, 1907.—The two pairs of birds arrived safely after the long journey, and give every satisfaction, also the box of small things. I can honestly recommend you to anyone in want of birds.—D. Hayes to W. Rudd.

Splendid condition, etc.
4, Railway-sq., Waterford. March 11th, 1907.—A line to acknowledge receipt of bird. It arrived here in splendid condition. Thanks for prompt attention.—P. Martling to W. Rudd.

Grand value and more than pleased.
14, Ordnance Quarters, Chattenden. March 12th, 1907.—I received the birds quite safe, and am delighted with them. I think they are grand value. I also received the flight cage, and am more than pleased with it.—W. A. Chapman to W. Rudd.

Very good value.
109, Wirtemberg-st., Clapham, London. March 15th, 1907.—Bird arrived all right. Very good value.—M. E. Sully to W. Rudd.

More than pleased again.
84, St. Augustine-rd., Southsea. March 6th, 1907.—The birds arrived quite safe and in good condition. I am more than pleased with them. The cock began singing as soon as he had had a drink.—J. Harding to W. Rudd.

More recommendations.
55, High-st., Amble. March 12th, 1907.—Birds arrived quite safe. Delighted with them. They are a pair of fine birds. I thank you very much for your fair dealing. I will recommend you to my friends.—Thos. Wilson to W. Rudd.

Right stamp, etc.
26, Downhall Green-rd., Bryn, near Wigan. March 17th, 1907.—The bird arrived safe. I could not have picked a better. It has a good head, chest, etc. My friend is highly pleased, and hopes to rear some good ones from him.—T. Dean to W. Rudd.

Well satisfied.
64a, South-rd., Waterloo, Liverpool. March 15th, 1907.—Norwich hen arrived safe. Am well satisfied.—A. Grenhalgh to W. Rudd.

More thanks for selection.
69, Vale-rd., Parkwood Spring, Sheffield. March 11th, 1907.—Birds arrived safe, and in good condition. Thanks very much for your selection and fair dealing.—S. Simpson to W. Rudd.

Quite satisfactory.
4, Back, 215, King Edward-rd., Ladywood, Birmingham. March 10th, 1907.—Cinnamon cock arrived here in perfect condition, and it is quite satisfactory. Thanks for prompt attention.—T. Baldwin to W. Rudd.

Quality and condition.
8, Windsor-ter., Radnor Park, Clydebank. March 16th, 1907.—Received bird all right, and was very pleased with it, both for quality and condition.—Wm. Irwin to W. Rudd.

True value for money.
25, Octams-st., Deptford, London. March 11th, 1907.—I received the birds safe, and I am more than pleased with them. They are true value for money. I shall do my best to recommend you.—C. Nightingale to W. Rudd.

Could not have done better.
Hyde-ter., Kidsgrove. March 17th, 1907.—Thanks very much for bird, which arrived quite safe. We are all very pleased with her, and she gives every satisfaction. I could not have done better if I had selected it myself.—B. J—— to W. Rudd.

Good ones indeed for the price.
Southfield, Lower Erith-rd., Torquay. March 16th, 1907.—I received the two Canaries, and am more than pleased with them. They are indeed good ones for the price.—Miss D. Bradshaw.

Highly delighted.
Castlegate, Lanark. March 15th, 1907.—I received the Canary all right, and am highly delighted with it.—T. Rennie to W. Rudd.

Every confidence.
Gilbert-st., Oxford-st., London, W. March 11th, 1907.—After a fortnight's trial the Canary, I am glad to tell you, gives every satisfaction, and I am delighted with it. His plumage is beautiful, and his singing powers are grand. He is altogether a splendid bird, and I have every confidence in recommending you to my friends.—C. A. Slack to W. Rudd.

Well pleased.
44, Northall-rd., Markinch. March 11th, 1907.—The Roller hen arrived safe, and I am well pleased with it. Thanking you for your prompt attention.—T. Mecking to W. Rudd.

Surprised at good value.
35, Ship-st., Folkestone. March 15th, 1907.—I received the bird safe, and am very pleased with same. It surprised me for the money.—S. W. Page to W. Rudd.

More Irish appreciation.
95, Rose-ter., Tyrconnell-rd., Inchicore. March 11th, 1907.—I received birds all right, and must say I am very pleased with them. I could not have chosen a better pair myself.—D. Byrnes to W. Rudd.

More than pleased.
6, Church-lane, Shepton Mallet. March 15th, 1907.—Many thanks for birds, which arrived safely. I am more than pleased with them. They are the finest Canaries I have ever seen.—F. C. Smith to W. Rudd.

FEEDING HENS PROPER, not little German wasters or Antwerp do., 2/9, 3/6; large 4/6.

TRAVELLING CAGES 3d. EXTRA.

"EGGERTINE."

It is the best, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for breeding as nothing else will. This during the past twenty years has been proved by thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size.

See my advertisements under respective headings, or full Current Price List FREE on receipt of address, also post free catalogue and full particulars of my

BUDGERIGARS, for breeding; large green birds, 6/- pair; yellows, 10/-; reduction by quantity; nearly all the largest breeders of to-day bought their first stock from me.—C. P. Arthur, Melksham. Stamp for reply.

"FINCHES from Afar."—A superb-coloured plate of fascinating Foreign Finches sent post paid, carefully packed, on receipt of sixpenny postal order.—F. Carl, CAGE BIRDS Office, 154, Fleet Street, London, E.C.

"A GORGEOUS Quartette."—A magnificent coloured plate of Parrakeets, by Mr. H. Goodchild, sent post paid, carefully packed, on receipt of three penny stamps.—F. Carl, CAGE BIRDS' Office, 154, Fleet Street, London, E.C.

TWENTY-FIVE pairs adult Budgerigars at 4/- pair, not less three pairs sold; separated four months; two pairs Cockatiels, 1906 birds, five sex unknown, all from outdoor aviary, strong, healthy. —W. Smith, Claremont, Redruth, Cornwall.

ROCK Mynahs, 18/-; large White Cockatoos, 18/-; Amazon Parrots, 15/-; Australian Piping Crows, 30/-; Malabar Starlings, 10/-; Bulbuls, 7/6 each; Mandarin Ducks, magnificent, 30/- pair. Lists.—De Von, 114, Bethnal Green-rd., London.

UNRELATED large Budgerigars for breeding, from extensive outdoor aviaries, 6/- pair; yellows, 10/6; not bird shop, but large breeder; inspection invited, and see them breeding; husk nests, 6d. each; send 6d. for my book on breeding.—Sapsford, Teddington.

AFRICAN Grey Parrot, brought from West Coast by gentleman, talking, whistling, does not screech, child can handle it, £2; Amazon, almost talking, 25/-; above birds both young, thoroughly acclimatised; approval; deposit.—Craik, Bourtree-place, Hawick.

PERSIAN Bul-Buls, 7/6; Scarlet, Tanagers, 17/6; superb Tanagers, 18/6; Brown Tanagers, 10/-; Silky Cowbirds, 5/6; Rose-pastors, in full song, 5/6 each; Zebrafinches, 4/6; Zebra Doves, 5/6; Silverbills, 2/6, pairs; lists free.—Harris, Naturalist, Newcastle-on-Tyne.

SUPERB Tanagers, 16/- each; Pope Cardinals, 5/6 each; Pennant Parrots, 15/- each; Rosey Cockatoos, 8/6 each; Cockatiels, 12/- pair; Zebra Doves, 5/-; Avadavats, 1/9; Silverbills, Cutthroats, 2/6; Blue Javas, 2/- pair; Scarlet Tiger Finches 2/- each; American White-throated Finches, 7/6 pair; cock Pekin Nightingales, 2/6 each. Lists.—De Von, 114, Bethnal Green-rd., London.

C. A. LUER,

Large White Lemon Crested Cockatoo, tamed, 50/-; Talking, tamed, Grey Parrot, 100/-; Tamed Blue-fronted Amazon, 50/-; Leadbeater Cockatoo, tamed, 50/-; Zebra Finches, 3/6 pair; Green Avadavats, 2/6 pair; Virginia Nightingales, 25/- each; Cape Canaries, 7/6 each; Seed Eaters, 7/6; Grey Parrots, 25/- each; Amazons, 25/- each; Saffron Finches, 3/6 pair; Hartz Mountain Roller Hen Canaries, 2/6 each; Madagascar Love Birds, 2/6 pair; Cockatiels, 7/6 pair; Zebra Doves, 2/6 pair; Alario Finches, 7/6 each; Collared Whydahs, 21/- each; Crimson-crowned Weaver Birds, 5/- each; Cock Cutthroats, 1/- each; Combassous, 2/- pair; Hand-reared Cock Bullfinches, 5/6 each; Madagascar Weavers, 3/6 each; Goldfinch, Linnet, Greenfinch and Siskin-Canary Mules, 7/6 each; Siberian Cock Goldfinches, 5/- each; Siberian Cock Bullfinches, 3/6 each; Rose Cockatoos, 7/6 each; Grey Java Sparrows 1/6 pair; Red Shouldered Whydahs, 15/- each; Russian Cock Goldfinches, 3/6 each Aviary-bred Budgerigars, 5/- pair; Yellow do., 10/- pair;

Another large lot of small African birds expected early next week, comprising small Waxbills, 2/- pair; Cutthroats, 2/- pair; Fine Finches, 2/6 pair. Owing to the great demand for singing Finches and sundry other small birds, these will have to be withdrawn until all orders are executed. I also beg to give notice to Fanciers in the South Eastern District, that I have taken the old-established business, **32, East Street,** where they can rely on obtaining the finest of quality in Birds, Cages, Seeds and requisites at the lowest possible prices. Telephone: 7504 CENTRAL. Telegrams: LUKULLAN, LONDON. Note Addresses—

121, LEMAN STREET, LONDON, E.

AND

32, EAST STREET, WALWORTH,

first bird shop on the right from Walworth Road, from the 26th instant.

PARROTS. PARROTS.

We send all our Parrots on four weeks trial, our risk, before settlement, and give you a four months' talking guarantee; all our birds are young, strong, and perfectly healthy. We guarantee satisfaction. Hundreds of testimonials.

WEST RIDING AVIARIES, CASTLEFORD,

IF YOU WANT

a genuine healthy Parrot see my list and amateur's guide, with the Parrot trick exposed; free, three stamps.—W. Rudd, Bird Specialist, Norwich.

GRAND FOREIGN EXHIBITS.

Magnificent cock Crimson-wing Parrakeet, 1st special Melbourne, 1st Dover, 1st Reigate, 3rd Palace in very strong company, one of the finest Parrakects in England, now in gorgeous, matchless plumage, acclimatised, outdoor aviary, £5 10/-, bargain; Greater Sulphur Crested Cockatoo, 1st Peterboro, 3rd Horticultural Hall, etc., in magnificent show form, tame, affectionate, and a talker; what cash offers for bird and large show cage?—Gordon, Longley House, Rochester.

BIRDS. ANIMALS. BIRDS.

State your wants for birds and animals. Everything in first-class condition. Some rare bargains for this week and next. Send early and state what you want.

WEST RIDING AVIARIES, CASTLEFORD.

SOUTH LONDON COL. & F.A.

Annual Smoking Concert.

The South London Columbarian and Fanciers' Association held their annual smoking concert on the 13th inst., and a most enjoyable evening was spent by both members and visitors, of which there was a record gathering. Mr. G. Munday was in the chair, supported by the committee, including the hard-working secretary, Mr. G. A. Jeffreys. The Chairman, in a few well-chosen words, started the music, and everyone settled down to see whether the programme provided by the organisers, Messrs. Sayer and Wallace Davis, would prove sufficiently entertaining to warrant their absence from the "stock." The first item was a pianoforte solo by the pianist, Mr. Eric Wilton, followed in turn by songs by Messrs. Kluber, Johnson, Palmer, Groves, Chase, Hamblin and Hammond. Ventriloquism by Mr. R. H. Munday, and violin solos by Mr. F. Nichols. The hit of the evening was, I believe, Mr. Sid Hammond, in his song, "Ha-Ha," and most amusing patter, which drew forth roars of laughter, while Mr. Munday, Junr., with his dummy figure, who insisted on poking fun at the various fanciers present, also came in for well-merited applause, not forgetting Mr. G. Hamblin, with "The Plumber" and "Bombay," both songs being rendered with his usual easy style; in fact, it is difficult to discriminate really which turn came in for most acknowledgment as numerous encores were insisted on, and graciously given by the artistes, showing the appreciation their efforts justly met with. At last, however, as time was getting on, Mr. Munday proposed a hearty vote of thanks to Mr. T. Kluber for the able way and prompt manner in which he had stage-managed the affair in his capacity of musical director, coupled with the name of Mr. Sayer, and after a few words in reply, the evening closed by all singing the "National Anthem."—C. WALLACE DAVIS.

A GROUP OF BRITISH CAGE BIRDS.

By ISAAC THOMAS.

A few Hints and Observations on some Popular British Birds.

(*Continued from page* 140.)

The Hawfinch is both a visitor to and resident in this country—that is to say, it stays in some parts of England all the year round, whilst he only visits the North in early autumn. He seems to come into the Yorkshire district simply to sample our rows of green peas, and when 6 or 7 of these marauders settle on a row of peas in the early morn, you wake up to find most of your peas gone. He is very shy and cautious in his habits, but like many other birds is more approachable in winter. He feeds on fruit; on the berries of the hawthorn, laurel, and holly, and his strong, ugly beak is capable of cracking hard seeds and shells. These birds build a loose kind of nest, often in a holly or thorn, composed of twigs, roots, moss, lichens, hair, and feathers, and lay from 4 to 6 eggs of a pale olive green, with spots of brown and streaks of grey. Their length is about 7 inches; the strong bill is of a bluish colour, pointed and very powerful. Between the beak and the eye is a black mark, meeting the black of the throat in a point: iris greyish white; head of a yellowish brown, the neck being crossed behind by a broad band of ash colour. Chin and throat are of velvet black; breast pale brown, back dark brown, changing to a brownish grey, and downwards to a yellowish brown. The wings are about 11 inches across, and are variously marked with a blackish brown, greyish white, and yellowish brown. Some of the wing feathers are curiously formed in the shape of a billhook, and the quill feathers near the back are square at the ends. The tail is very short and blackish-brown, with some markings of white, the middle feathers shorter than the rest. The upper tail coverts are yellowish brown, and the under tail coverts white; legs, toes, and claws are abrownish red.

A WINTER VISITOR.

The Bramblefinch is a handsome bird; it is a winter visitor only, its home being Norway and Sweden and Denmark. It usually arrives in this country in October and November, and leaves again in spring. The male bird has a beautiful combination of colour. Its length is about 6¼ inches, the upper mandible being dusky, the lower yellowish white, and the iris brown. The top and sides of head and neck in winter are of mottled grey and black, the feathers being black at base, and grey at tips. In spring this grey changes to a dense black; chin, throat, and upper part of breast to a rich orange fawn, lower part to a yellowish white. The greater wing coverts are black, tipped with orange fawn; lesser coverts orange fawn, tipped with white. When the wing is closed there is an oblique bar across it. The feathers on the rump are white, which is very conspicuous when in flight. The tail is forked and black, edged with buffy white; legs, toes, and claws are of a lightish brown. He makes a splendid exhibition bird when properly tame, but I have found him difficult to get steady.

THE BUNTINGS.

The Yellowhammer or Bunting is very common all over this country. He is a handsome bird, and rejoices in a lot of names, such as Youley, Goldie, Yeldrock, and Yoit, with many more too numerous to mention. His song is very pleasing to hear. It resembles "A-bit-more-bread-but-no-cheese," with the "c-h-e-e-s-e" very prolonged. It varies considerably in colour, some birds having far more yellow than others, while the red of the breast and lower part of the back is also variable in depth of colour. Its nest is mostly built near or on the ground, and usually contains 4 or 5 eggs of a purplish white, streaked and spotted with dark reddish brown.

I have so far described only birds that can be kept by ordinary persons as cage pets, and I have about exhausted my knowledge of British seed-eating cage birds. I will now describe one of the Buntings. One of the principal characteristics of this interesting group of Passerine birds is the bill, which is very strong and conical, the upper mandible having a strong nob on the palate, often called a tooth; the sides of the mandibles bend inwards. Common Buntings are about 7½ ins. long, of a thick, bulky type, much after the stamp of a good Cinnamon Norwich Canary. The plumage is very pleasing, showing a beautiful blend of different shades of brown and yellow. The iris is dark-brown; over the eye is a faint mark of yellowish grey, extending in a curve down the cheek. The head, crown, and back of the neck are yellowish brown, inclined to olive, and the centre of each feather is streaked with brown. In front the feathers are tipped with a triangular mark of brownish black, larger and darker on each side, where they form a line. The chin, throat, and breast are a dull white in summer, and in winter a yellowish brown marked with streaks of dark-brown, which are longer further down the body. The back is pale yellowish brown, with streaks of darker brown. In autumn it becomes more olive in colour. The wing coverts are dark-brown, with a broad edge of a lighter brown. The tail is slightly forked, rather long, and dark-brown in colour, the edges of the feathers being much lighter, the under tail coverts of a pale yellowish brown. The legs are a reddish brown; toes dull yellow; claws of a deep brown. This bird is fairly common throughout Great Britain. Its local names are: Bunting, Lark, Clod-bird, and Corn Bunting. The flight is undulating; when on the ground it moves quickly by hops. It often roosts on the ground in stubble, or low hedges or bushes. It is a most quarrelsome bird. It usually commences to build its nest at the latter end of April. It is commonly built on the ground in the middle of a field, in a sunny bank, or amongst the coarse herbage in the bottom of a hedge, and sometimes in a bush. The nest if made of small fibrous roots, dried grass, or hay, and beautifully lined with fine moss wool and hair. Four eggs are usually laid, of blunt oval shape, of whitish colour, tinged with greyish red, spotted and marked with streaks of purplish brown.

IMITATIVE BIRDS.

By D. STEWARD.

Some Interesting Notes on Feathered Mimics and Comedians.

(*Continued from page* 738.)

A relative of mine had a Jackdaw, and one day "Jack" was seen marching very slowly and solemnly up and down the yard for several moments with something in his beak.

Presently he came to the back door, where he entered, and with a most important air carefully laid down on the kitchen floor a comb!

With regard to the Raven's powers of mimicry and mischievous propensities, I am inclined to think that both are considerably overrated. The Raven at best is rather a dull, stupid, and not particularly interesting fellow, is clumsy, and lacking in the sharper intelligence and alertness that mark the characters of the Jackdaw and Magpie. He is slow to imitate words or sounds, and often never attempts either. If he does, he probably forgets them in a comparatively short time, not that he picks up fresh words in their place, for he does not, but he may retain perhaps two words or sounds, which he repeats mechanically, and on every occasion for the rest of his life. He is by no means particularly mischievous. Certainly he will pick a hole in the wall and pull the paper off, upset his water-tin, or otherwise amuse himself by pulling the dog's tail and tweaking its ear; but then, other large birds will do that. Neither, again, is he discriminate or intelligent enough to avoid applying his vice-like beak to the fingers of his owner; he will serve everybody alike with the evil appendage when in the humour and has the chance.

A DOG WITH A BAD NAME.

It is a great pity that the stupid, ignorant belief that the much-maligned Magpie is a thief, and of the most mischievous disposition should still survive, for the Pyat is certainly not the first, nor, in any unusual degree, is it the second. The fallacy is calculated to do infinite harm to one of the most intelligent and beautiful of British birds. It may be taught a few words, but its imitative powers are not great, and on the whole the Jackdaw makes the better talker.

But the "Pie" makes a most charming pet—he is such a bonny bird, with his bright, black eye and his spotless white and glossy black plumage.

He should always have his liberty in a garden, where he will amuse himself for hours, chattering and jerking his long tail as he darts hither and thither looking for insects; and with little trouble can be taught to come at a whistle and alight on one's shoulder for a bit of raw meat, which he loves. Moreover, no one need fear to leave jewellery about near an open window, for "Mag" is far too suspicious and shy to enter, and even if he did venture, he would not touch anything—I speak from practical experience.

PIPING BULLFINCHES.

To come to the Bullfinch. This pretty little bird can, with a certain amount of patience, readily be taught to pipe any simple air, though it will probably be broken. The method of teaching is to place the bird in a dark room, and, either before or while feeding, whistle to it the desired tune on an instrument provided for the purpose. It is remarkable what a difference there is between the voice of a Piping Bullfinch and that of a wild or untrained one. In the latter the notes are low and insignificant, while in the former the voice becomes agreeably loud and clear, piping out a tune in sweet, ringing tones most pleasant to hear. Germans seem the most successful with Piping Bullfinches, and indeed it is from Germany that most of the best pipers come; but, even so, a good piper is somewhat difficult to meet with—at least, over here—and it consequently always commands a high price.

The little Reed-Warbler, which sings by night as well as day, frequently imitates the notes of other birds. How far its powers of imitation would extend under domestication it would be interesting to know, as it would also be in the case of the Blackcap Warbler, another of the song thieves, for although he has a sweetly-pretty melody of his own, he is not content with it, but must needs steal the notes of various songbirds — the Nightingale's amongst others—which he trills as joyously and correctly as if they were of his own composing.

CLUB REPORTS.

NEWCASTLE AND DIS. C.B.S.

Meeting held 7th inst. Mr. Shepherd in chair. Eight new members were accepted. A vote of sympathy was passed, condoling with Mr. F. F. Hawkins on the loss he has sustained in losing a quantity of valuable birds through an escape of gas. It was proposed that a noviec be a person who has never won a 1st prize, and that an amateur one who has never won more than one 1st prize, but it was agreed that the discussion be deferred until next meeting. Subscriptions are due next meeting, April 4th.—CURRY AND HUTCHINSON, Secs.

LOANHEAD C.B.S.

Meeting of the above, March 9th, Mr. A. Gilcbrist, president, in the chair. Ten new members were admitted: Messrs. J. Noble, D. Noble, Lawe, Hoggan, Bonnyrigg, J. Pearson, T. and W. Nisbet, C. Nisbet, T. Allan, W. Aitken, J. and P. Corrigan, and A. Rowe. The following classes were approved of:—Scotch Fancy 10 classes, 4 clear, 4 pied or green, 2 foul. Borders 8 classes, 4 clear or ticked, 2 variegated, 1 even marked, and 1 green. Mules 1. British 1. The President and Mr. John Yule waited on Provost Kerr, who has been pleased to accept the office of honorary president.—WALTER B. SMART, Secretary.

LEITH O.S.

Monthly meeting, Labour Hall, Smith's-place, last Saturday, Mr. Jas. Lumsden in the chair. Two new members were admitted. The Secretary intimated that the following had kindly consented to become patrons for this year:—Provost Mackie, Messrs. W. Graham Yooll, and John Dobbie. The annual show was fixed for the 26th October. Mr. Wm. Hook and the Secretary were instructed to look out for a suitable hall, and report to next meeting, which is the last one for new members being enrolled, and for booking hens. Fanciers intending to join should send in their names to the Secretary or any member. The society is open to the County of Edinburgh. Entry fee, 6d., with a subscription of 8d. per month. Any other information can be had from the Secretary, GEORGE BROWN, 9, Hermitage-terrace, Leith.

DERBY CAGE BIRD CLUB.

Meeting held in the Victoria-st. Congregational Schoolroom, on March 9th, by permission of the Rev. S. Lawton Platt and deacons of the church, to consider the desirability of removing the headquarters of the society to the above schoolroom. Mr. Jos. Hill (President) presided, supported by the Rev. S. Lawton Platt, Mr. J. C. Barnes, Mr. T. B. Evans, and a good attendance of members. The Chairman, in a neat speech, advised the members to accept the most generous offer held out to them, and this was strongly supported by Mr. J. C. Barnes, who hoped the Rev. Lawton Platt would give a short address to all lovers of cage bird life at their next meeting on the 23rd inst. Eventually it was proposed and seconded, and unanimously carried that the offer be accepted.

CITY AND SUBURBAN A.C.B.

Large gathering of members on Monday, March 11th. Messrs. F. C. Allen, E. J. Potter, B. Allen, and J. Nadford were elected members; nominated, Mrs. Maher, Miss Shepherd, Mr. E. Morris, and Mr. A. B. Cox. The bronze medal, given anonymously, for the member nominating the 100th member, fell to Mr. W. Shepherd, in nominating his daughter. Mr. A. W. Curtis (C.B.U. delegate) gave an account of the recent meeting, also pointing out that Mr. Bradshaw had been credited with his speeches, no doubt due to the reporter not knowing the names of the delegates. After discussion, it was decided to call a council meeting to make certain recommendations, and forward on to the C.B.U. Secretary. The balance sheet of the Pair Show was confirmed as read. The Chairman declared Mr. Prior unanimously elected judge for the Finch Show. In connection with the annual outing, taking place on May 25th, a fund was opened for small payments, to be returned on the day of the outing, together with an interest of 10 per cent. (given anonymously) upon the whole amount. The Chairman then called upon Mr. Allen Silver for his lecture on Wild Bird Life. Taking us, in the mind's eye, through rambles in Sudbury, Suffolk, alone, with keepers, and in company with a close British bird-loving friend, the lecturer enumerated with graphic detail the various species met with. Questions were asked by Messrs. F. Turnber, H. Goodchild, A. S. Weller, W. Prance, and V. Wynn, many of them bearing on the much discussed Nutcracker and Great Grey Shrike. A vote of thanks to Mr. Allen Silver, proposed by Mr. A. Wheller, seconded by Mr. A. W. Hart, and supported by Messrs. A. W. Curtis and H. Goodchild was carried with enthusiasm.—V. WYNN, Hon. Sec.

BRADFORD (WEST) C.B.A.

Annual tea and social on Saturday, March 9th, when 67 members and their wives sat down to tea. Afterwards a social evening was spent. Mr. W. A. Cowgill, the President, in his opening remarks, said that he hoped they would one and all enjoy themselves, as the committee had done their best to get together a good variety of talent. During the interval he called upon the secretary to give his report. Mr. T. Clegg said that it had been the pleasing duty of the secretaries, for a good many years, to be able to report on the progress made by the society, but he was sorry that he could not do that on this occasion. They had an increase in the balance in hand; last year they had £38 5s. 7d., this year £40 2s. 1d. in hand, but there had been a falling off in the number of members. Last year they had 91 members, and this year 76, owing, he thought, to so many new societies springing up round about. But he could not blame members, as he thought that it would be better for the Fancy, as being nearer home they would attend the meetings better, and take a greater interest in the society. He, himself, was not particular about having a large number of members; he would rather have half the number if they would all attend, and take an interest in the society. He thought that they ought attend, as it was only for two or three hours once a month. Would they bring suggestions and ideas for the committee to work upon, instead of leaving it all to the committee to do as they thought best? The President, in presenting the prizes for last year's competition, said that it had not been as successful as he could have wished. There was a long difference between the first and sixth prizes in the championship section; the first had 57 points and the last 13 points, and it was similar in the novice section. He said that the society had gone on different lines this year, the champions and novices showing in the same classes, but the points counting separately, and he would like to point out to novice members that they had as good a chance as the champions. At the last show the novices did better than the champions, as out of 51 entries the champions made 123 points and £1 3s. 9d. prize money, and the novices with 25 entries made 67 points and 14s. 3d. prize money, which, in proportion, was better than the champions. At the close the usual toasts were given. —T. CLEGG, Sec.

FALKIRK AND DIS. C.B.S.

Monthly meeting of the above in the Oddfellows' Hall on March 7th, when a number of old members and several new ones were enrolled. It was settled that membership fee be 3/6 instead of 3/- as formerly. The date of annual show was fixed for October 26th, 1907.—W. CLUBS, Sec.

DEWSBURY C.B.S.

Annual meeting. Officers elected:—President, T. Hall; Vice-president, W. Mitchell; Secretary, B. Cook; Treasurer, A. Cook; Trustee, F. Hird. The balance-sheet showed £7 3s. 1d. in hand. Mr. Allen presented the points medals won by Messrs. A. Cook and Son (champion), F. Hind, and W. Mitchell (novice), the recipients making suitable acknowledgment.—B. COOK, Hon. Sec.

GREAT HORTON GOOD INTENT O.S.

Annual Members' Tea at the Co-op. Cafe, on March 9th, when an excellent repast was served by the manager, Mr. Fisher. A good company of Canary fanciers, their wives, and friends assembled. The after proceedings took the form of a concert. Chair was taken by the vice-chairman, Mr. H. Schofield, while the President, Mr. J. T. Brook, Mrs. A. W. Hartley, and Miss Marie Fieldhouse contributed songs, which were well received. Mr. Augus Holden gave a violin solo. Mr. Fisher gave great pleasure by a recital called "The Signal Box," and Mrs. H. Schofield had the gramophone in hand, which went far towards the evening's enjoyment. Mr. Percy Illingworth made a capital accompanist. —ALBERT HOLDEN, Sec.

INVERNESS O.A.

The above association held a successful social meeting on March 15th, in the Crown Mission Hall. Mr. Alex. Sanderson (president) presided over a large and appreciative gathering of members and friends. In his opening remarks, Mr. Sanderson dwelt at some length on the progress of the association since it was instituted some twenty-seven years ago. He exhorted all the non-member fanciers present to become members of a society which, he felt sure, was one of the best managed in the country. During tea Mr. John Mackenzie gave a phonograph entertainment, which was greatly appreciated by the audience. Thereafter an excellent musical programme was gone through, the following artistes having kindly assisted:—Messrs. A. G. Grant, Docherty, Mackenzie, Urquhart, Dyson, McAlpine, etc. Mr. E. F. Lowe gave a splendid exhibition of conjuring, which evoked the hearty plaudits of the audience. Mr. H. Black presided at the piano. At the close votes of thanks were accorded to the artistes, by Mr. John Mackenzie, and to the Chairman, and to the Secretary for his complete arrangements.—A. URQUHART, Sec.

KENT COUNTY C.B.A.

Annual meeting, February 27th. The balance-sheet showed a balance of £3 14s. The Secretary's report said 67 members were enrolled, sixty-one having paid their subscriptions, the membership to date being 73, whilst the shows had been well supported. Patronage was given to five shows:—Ashford first feather, Rochester, Folkestone, Margate, Dover. Our first annual show was held at Dover, Jan. 9th, 1907. This, however, could not be called a success, owing, no doubt, to the lateness of the season; and I have no doubt that in the event of our deciding upon another show next season a month or two earlier we may reasonably expect a very different result, particularly as we hope to have a few cups for competition. With regard to specials we have to thank Mr. J. Broad for the handsome silver-plated tea service kindly given for most points in Crest and Crestbred classes, to be won in one season, and which was practically a "walk over" for Mr. G. S. McCreath. Mr. E. Heritage kindly gave a silver shield, to be competed for annually, for most points, and which was won for the first time by Mr. F. J. Gibbs. Other specials were also given by Messrs. E. Birch, W. Ward, E. J. Leaver, E. Brown, W. J. Abbott, J. Reevo, A. Eade, W. Austin, Miss Brandon, Mrs. Soames, G. S. McCreath, and G. Sanderson. Too much praise cannot be given to those members who so generously contributed to the prize fund. Before closing I should like to refer to the valuable assistance rendered by the Chairman. The election of officers resulted as follows:—Vice-President, W. Ward; Chairman, E. Birch; Vice-Chairman, W. J. Abbott; Hon. Treasurer, W. Austen; Hon. Sec., G. Sanderson; Hon. Assist. Sec., H. Sarjeant; Committee, Headquarters, Messrs. E. J. Leaver, N. Campenny, E. Heritage, E. Brown, J. Reeve, A. Eade, C. Raynor, and H. Ward; County, Messrs. G. S. McCreath, L. A. Brett, E. Jenner, H. Casemore, W. J. Jones, R. Patterson, H. E. Taylor, G. F. Acland, J. Broad, W. Thompson (Chatham), A. Lorden, and F. J. Gibbs. The following new members were elected:—Messrs. Mitchell, Johncock, Pybus, Lewis, and Abbott. After some discussion re show and the giving of patronage to other societies, it was agreed to leave the matter over until next meeting. Mr. McCreath proposed, and it was carried, that all cups, etc., be competed for by birds bred by exhibitor during the current year. Messrs. Ross and Banscombe acted as scrutineers.—G. SANDERSON, Hon. Sec., 208, Folkestone Road, Dover.

ORMSKIRK AND DIS. C.B.S.

A "full house" was the outcome of the second meeting, held March 4th, at the "Horse Shoe" Inn, the residence of that well-known breeder and exhibitor of Belgians, Mr. J. Walmsley. Adoption of rules was the chief business transacted. Six new members were admitted, and the First Feather Show was fixed for the first Saturday in July.—T. H. TIPPEN, Hon. Sec.

MORLEY C.B.S.

At a special meeting of the above society, recently held, a very interesting lecture was given by Mr. A. Bottomley (Laisterdyke) on pairing and breeding Yorkshire Canaries. A good number of fanciers turned up, and a very enjoyable evening was spent. A lengthy discussion ensued, which was freely taken up by the old fanciers and novices present. A hearty vote of thanks was given to Mr. Bottomley.—W. H. GROUNDWELL, Sec.

SHIPLEY O.S.

Monthly meeting March 5th, when a much appreciated lecture was given on pairing of Yorkshires, by Mr. R. Halliday. We have fixed the dates of our Nest Feather Shows for June 1st and July 20th. We are having a few more lectures, an open show, and two winter members' shows. New members enrolled this year are Messrs. J. Holroyd, J. Hardaker, J. E. Clegg, J. Fieldhouse, E. Grange, A. Ambler, H. Hardaker, E. Armstead.—H. DOBSON, Sec.

DULWICH AND PECKHAM C.B.S.

A splendid muster of members and friends assembled, on March 7th, to hear Mr. Hodson's paper on British birds. He was assisted by Mr. Butler, who, by the aid of his powerful lantern, threw lifelike pictures of the birds on a large screen, these having been taken from actual photographs. They depicted characteristic attitudes. Mr. Hodson gave a short account of each, dealing with their habits, diet, etc., in a manner that left no doubt as to the ability of the lecturer in dealing with such an extensive and inexhaustible subject. His tit-bits of information could only have been gained by long practical experience and keen observation. Those who attended had a most enjoyable meeting. The worthy secretary and lecturer were well repaid by the keen and attentive audience, and the nomination of four new members.

NATIONAL B.B. AND M.C.

Adjourned annual general meeting at headquarters, 25, High Holborn, February 28th. Present: Messrs. Trower, Goodchild, Barker, Hathaway, Lott, Silver, Dewhurst, Maxwell, Robson, Weston, Plumbridge, and Carr. The following officers were elected for the ensuing year:—Chairman, Mr. J. Robson; Vice-Chairman, Mr. Fulljames; Auditors, Messrs. Cooper and Sandy; Hon. Solicitor, Mr. P. Nicholls; Hon. Treasurer, Mr. Trower; Hon. Secs., Messrs. Plumbridge and Carr. London Committee: Messrs. J. Dewhurst, A. Silver, E. Hathaway, G. W. Fawkes, N. Barker, W. Francis, G. E. Weston, F. Turnber F. Vincent. Provincial: Messrs. W. Swaysland, W. T. Plumbridge, A. E. Bailey, J. F. Hills, J. Walsh, A. Howe. It was unanimously carried that the Provincial Committee should participate in the management of the club. An agenda of the Committee meetings will be sent each month to the Provincial Committee to enable them to vote by proxy. This concluded the business of the annual general meeting. A committee meeting followed, Mr. Robson in the chair. A letter was read from Mr. A. E. Bailey, re exhibiting in the name of Bailey Brothers. Proposed by Mr. Dewhurst, seconded by Mr. Lott, that Hon. Secs. write asking whether, as the name Bailey Brothers was that which he traded under, and that as there was no partner in the keeping and exhibiting of his birds, could he not see his way clear to exhibit in another name? The Committee felt sure it would cause the club a great deal of trouble. A letter was read from Mr. Hodson, re Mr. Vale's birds not being nominated for the club's cups. Hon. Secs. were instructed to thank Mr. Hodson for his letter, and say that the Committee accept his statement. After a long discussion as to Mr. D. Hunt winning the two gold medals in London, it was proposed that the two medals be granted. Mr. Hathaway gave notice for the amendment of Rule 14 at the next meeting. Proposed by Mr. Trower, seconded by Mr. Lott, that a list of shows where the club gave patronage be printed each year and sent to every member. It was decided that the club's annual dinner take place at the Holborn Restaurant on March 22nd, Messrs. Trower, Vale, Dewhurst, and Robson to carry out arrangements. Mr. Weston gave notice for the amendment of the classification of the Crossbill at the next meeting, and Mr. Goodchild for the amendment of the Snow Bunting. Any records of the nesting of members' birds will be welcomed by the Secs. A very interesting bird, viz., a Chaffinch-Bramblefinch Hybrid, was sent up by Miss J. Reeves for the Committee's inspection and opinion. Hon. Secs. were instructed to write to Miss Reeves, thanking her for her kindness, and congratulating her on breeding such a fine specimen and on the excellent condition it was in. The following were elected members: Messrs. G. A. Ackhurst, Prattie, Seal, J. Best, W. True, R. J. Pretty. A hearty vote of thanks to the Chairman concluded the meeting.—PLUMBRIDGE and CARR, Hon Secs.

JARROW AND DIS. C.B.F.S.

Meeting held March 6th. Decided to hold show on October 11th and 12th. Rules were gone over and adopted, with a few alterations. New members were enrolled, and various officers and trustees. Meeting nights first Wednesday in each month. Entrance fee 1/-, yearly subscriptions 2/6. Next meeting April 7th, when all moneys must be paid. Any information can be had from the Sec., J. T. CARRICK, 44, Caledonian-rd., Jarrow.

EDINBURGH NORWICH AND M.B.S.

Monthly meeting, held in rooms, 142, High-st., March 7th, Mr. Rodgers in the chair. There was a large gathering, and three new members were enrolled, bringing our total up to 12 new members for the season. It was decided unanimously to add two classes for Scotch Fancy. A lecture was then given on the Goldfinch by Mr. Cochrane, who had a number of drawings, with which he was able to more fully describe the various points touched upon. A most enjoyable evening was brought to a close by a hearty vote of thanks to Mr. Cochrane for his able and instructive lecture.

KILSYTH F.A.

Annual meeting, held March 9th, Mr. A. Hardie presiding over a good attendance. After discussing the advisability of dropping the Poultry and Pigeon sections, it was carried that the show be carried on as before, the fanciers present pledging themselves to give all the support they could. Office-bearers:— President, Mr. A. Hardie; Vice, Mr. Wm. Irvine; Treas., Mr. J. Paterson; Sec., Mr. A. D. Duncan; Executive, Messrs. J. Barrie (Queensloburn), John Barrie (Shuttle-st.), Wm. M'Greachen, G. Shillinglaw, J. I. Little, Wm. Inglis, and Alex. Loudon, with power to add to their number. The show was fixed for the usual date in December.

FALMOUTH AND DIS. C.B.A.

Annual meeting at Ralph's Hotel, on March 7th, Mr. E. Moseley presided. The following officers were elected:—President, Mr. John Barker, M.P.; Vice-Presidents, Major Mead and Dr. C. C. Bullmore, J.P.; Chairman, H. Cox; Secretary, Thos. Burton; Treasurer, F. Gosling. The following Committee was formed: Messrs. J. Condy, J. Johnson, R. Jackett, F. Hall, W. Medlin, E. Moseley, F. Barnicoat, J. Hosking, T. Tresise, and R. H. Brenton. The financial report showed receipts amounting to £30 11s., and expenditure £19 9s. 6½d., leaving a balance of £11 1s. 5½d. The Secretary reported at present 40 members.—THOS. BURTON, Sec.

WEST OF SCOTLAND B.C.

Annual meeting held at Glasgow, March 2nd, Mr. Jas. Lappin presiding. The balance-sheet was accepted. Mr. Jas. Lappin, present President, declined office, and Mr. J. J. Mansou was voted President for the next year. Messrs. Smart and Laurie were elected Vice-Presidents. Mr. Livingstone declining to take office again, several names were voted on for Secretary, Mr. Buchanan, of Paisley, coming in for the post; but, after due consideration, he begged them to relieve him, as he really could not see his way to give the attention required. It was decided that Secretary be paid for his work to the extent of £1 10s. Mr. Smart was asked if he would accept, and he consented, Mr. Buchanan taking his place as Vice-President. Committee: Messrs. Brownlie, Young, Lappin, Macaulay, J. Muir, McNicol, Montgomery, and Henderson. The meeting closed with a vote of thanks to the retiring officials. All communications in future must be addressed to G. SMART, Fernwood Lea, Carmyle, Glasgow.

SCOTTISH CREST CLUB.

Annual meeting, held Nelson's Temperance Hotel, Glasgow, March 9th. The question of the exhibition of blind birds was discussed at length; finally it was decided that blind birds be passed, and partly blind birds left to the judges' discretion. The balance-sheet showed £3 6s. 7d. in hand. Medal winners: Gold medals, 1906 birds, G. F. Adamson, Crested, and J. Reid, Crestbred. Silver medals, old birds: J. Noble, Crested, and J. C. Wallace, Crestbred. The standard club show cage was next brought up and considered very unsatisfactory, owing to so many different shades of colour, and the President took the responsibility to see that put right. Mr. Young suggested that we should also have standard tins, upon which the meeting were unanimous, and it was agreed that the members get as many of the different types of them as possible for selection at the first Committee meeting. It was decided that we hold a Club Show in conjunction with another association. The combination Club Show was discussed, but was left over. Letters were read from Aberdeen and Kilsyth Associations, soliciting patronage of S.C.C., but were left over until the result of voting papers are known. It was decided that membership list should close on October 1st, and a list printed and sent out to the members. Two new members were proposed: J. Lappin (Ruthergien) and W. Irvine Kilsyth). First Committee meeting, May 11th. A hearty vote of thanks to Secretary for his work, and also to the President for conducting the business, brought a most harmonious meeting to a close.—A. CHALMERS, Hon. Sec.

SCOTTISH B.B. AND M.C.

Annual meeting, held on March 2nd, at Edinburgh. Mr. L. J. Arrighi presided. Balance-sheet adopted. A large number of gold and silver medals were presented to the respective winners. It was agreed to delete the word "two" in Mr. A. W. Watson's motion, and which was carried by a large majority. The club unanimously decided to take no action re specialist club show. The trophy question was briefly discussed, and it was agreed to form a Sub-Committee for the same: Messrs. L. J. Arrighi, J. Winter, A. W. Watson, J. Livingstone, and the Secretary. The uniform show cage question was discussed and defeated. The Foreign bird question was again defeated by one vote. Mr. G. N. Barclay drew the members' attention to Foreign Goldfinches appearing in British classes at Leith Show, and, as this had inconvenienced our members, it was agreed that in future Secretaries applying to us for the patronage of the club shall state whether Goldfinch or Builfinch classes are for British or Foreign, or both. Next meeting, Kirkcaldy, first Saturday in September, when it is to be hoped all members in the surrounding districts will endeavour to attend. A few members cleared their subscriptions at the close. L. J. Arrighi was proposed for the presidentship, but respectfully declined. The popular President of the S.N.C.B.S., A. C. Dandie, was then unanimously elected. Vice-Presidents, L. J. Arrighi and Dr. Galloway. Secretary and Treasurer, R. Farmer, 11, South Elgin-st., Edinburgh. Committee: Messrs. W. Ruddiman, Cupar, Fife; J. Davidson, Markinch; J. Robertson, Perth; A. Law, Dundee; T. Erskine, Glasgow; F. McQuiston, Ayr; W. C. Cunningham, Kilmarnock; C. S. Crockatt, Arbroath; A. W. Watson, Leith; J. Livingstone and R. Bald, Bathgate; J. Pendrigh, A. Cochrane, and W. Millar, Edinburgh. Messrs. R. Craig and A. Watson, Auditors. A vote of thanks to the Chairman concluded an interesting meeting.

ESTABLISHED 102 YEARS.

HINDHAUGH'S

'SPANISH' SEED.

Absolutely the finest the World produces—Boldest and Cleanest.

MONEY CAN NOT BUY FINER.

100 " " " 200 "	10d. "	1/2 "	2/4 "
Over 200 any distance	11d. "	1/6 "	2/11 "

JOHN HINDHAUGH & CO., *Direct Importers,*

Proprietors:— MILLERS AND MANUFACTURERS,

Alderman J. Barker Ellis. Sir Joseph B. Ellis, J.P. William B. Ellis. Joseph Ellis.

Newcastle-on-Tyne.

READING AND DIS. C.B.S.

Usual monthly meetiug, Palmer Hall, West-st., Reading, on March 6th. Five new members were elected. A 30-mile radius show was decided upon, to be held either November 20th or 27th next. The Chairman (Mr. Brooker) delivered a very interesting address on "Food and Feeding," which was much appreciated. Next meeting April 3rd, 8 p.m., when Mr. Geo. Packwood will speak on "Management in the Bird Room." A good attendance desired.—G. A. CHARLES, Sec.

ST. ANDREW'S O.S.

Annual meeting of the St. Andrew's O.S., Town Hall, March 12th. The balance-sheet indicated that last year's show has been the most successful ever held by the society. The following office-hearers were then elected: Messrs. P. W. Millet (president), M. Chess (vice-president), Thomas Auchterlonie (hon. sec. and treasurer), and a working committee of the following: Messrs. J. Brown, H. Smart, J. Mackie, Wm. Melville, A. Robinson, and J. Ness, jun. The date of show was fixed for Oct. 5th, 1907.—THOS. AUCHTERLONIE, Hon. Sec. and Treas.

GATESHEAD AND DIS. C.B.S.

Meeting held March 6th, and a good attendance turned up. Correspondence was read from Mr. S. Hadwin, Mr. A. Grey, Mr. A. Russell, etc. This year's balance sheet was found to far exceed in every respect that of 1906. The improvement was marked in every section, and the show stands as a record for the society, proving the healthy state of the Fancy in the North, which has increased by leaps in the last few years. Great credit is due to you, as Editor, in bringing forth a paper to deal with the cage bird Fancy exclusively, and there is no doubt this has helped materially to give the present toue to the cage bird Fancy. Electiou of judges was left over to committee meeting, to be held on March 27th. Three new members received a hearty welcome: Mr. T. Almond, Mr. E. Clark, and Mr. J. Hunt. The meetings were arranged to take place on Wednesday evenings at 7.30 p.m., at Newton and Skeen's Cafe, Half Moon-lane, once every six weeks. Next meeting, April 17th. Members' subscriptions must be forwarded by next meeting.—T. TAYLOR, Hon. Sec. and Treas.

ST. HELENS O.S.

Meeting held March 4th. Mr. Jno. Hesketh in the chair. The balance-sheet was adopted, which shows cash in bank £4 13s. 7d., total assets £8 5s. 8d. Liabilities, nil. If local fanciers will come into the Society as members, there will soon be a possibility of again holding an Open Show. All earuest fanciers are cordially invited. A very successful amateur judging competition took place, pairs matched for breeding show birds. Eleven were staged, and Mr. Chas. Houlton made the awards. Eight members cuteied the competition, and were allowed ten minutes each to judge. The difference of opinions was very wide; no two were alike, while no one fixed them quite as Mr. Houlton had placed them. Two prizes were provided and a special. Mr. Lover staged best pair and won special. Mr. Rogers proved best amateur judge, with five correct placings, and losing only 14 points on the other six. Mr. Mills came second, Mr. Hesketh and Mr. Scott ticing for third, with Mr. Berry fourth. Interesting discussion was held over the several pairs, and some valuable ideas and opinions were exchanged. Fanciers wishing to join should write T. VOSE, sec., Argyle Street, St. Helens, Lancs.

BURY AND DIS. C.B.S.

Monthly meeting March 12th, Textile Hall, Bury. An excellent paper was given by Mr. Raynes, Secretary of the Norwich Plainhead Club. Mr. Raynes gave a brief definition of what he considered a typical Norwich, and contrasted the same with the so-called Norwich, which frequently finds its way into the list of prize winners at every show. Many of the latter could be more accurately classified if exhibited in the Yorkshire class. Their build, generally, he said, greatly exceeded the standard of the typical Norwich, but so long as the present diversity of opinion among judges existed, so then would these birds appear as prize winners. The idea was prevalent that a big bird with plenty of colour attracted the eye of the judge in preference to the typical Norwich, which had not been subject to colour feeding. Mr. Raynes regretted that some of the Norwich Plainhead Club's judges were too much impressed by the size and colour of the bird instead of having a standard. In comparing the respective value of the cock and hen, he emphasised the value of the latter, declaring that "type" came from the hen and colour from the cock, and in his opinion type ought to receive first consideration and colour last. In fact, he did not consider colour feeding an essential treatment for Norwich. Mr. Raynes invited discussion, to which several members responded.—W. P. TURTON, Sec.

LANCASHIRE AND LIZARD F.A.

A large gathering assembled at the White Lion Hotel, Manchester, on March 2nd. Before the appointed time good old faces could be seen parading the fanciers' principal street (Tib-st.), some carrying parcels with the usual air space for feathered pets. Our worthy President, Mr. John Garner, was in the chair. The Secretary's report and balance sheet was in the best of order, and clearly showed the advancement being made by the L. and L.F.A., it having been one of the most prosperous years. The income was close on £15. The Secretary was very sorry to have, through pressure of work, to tender his resignation, but the members would not accept it, and after many feeling remarks and promises of assistance, he could do no other but take on the important office for another twelve months. Three new members were enrolled: Mr. Smith (Gorton), Mr. Dickinson (Denton), and Mr. Nelson (Macclesfield. Mr. John Garner was again unanimously elected president, Mr. John Swallwell re-elected treasurer, Mr. H. Oliver re-elected secretary, Messrs. Baker, Rukin, Lawton, Hampshire, Clegg, and Nelson (Stockport) were elected vice-presidents. Committee: Messrs. Vickers, Hamer, Buckley, Dewsnap, Wynn, Booth, Ollrenshaw, Haslam, Slater, Massey, Collinge, Lee, Nelson (Macclesfield), Dickinson, and Smith. On the question of two silver cups and gold medals, Mr. Baker, Mr. Swallwell and the Secretary were elected to purchase them, the same to be presented to the winners on Saturday, April 6th, at the dinner at the Spinner's Hotel, Shawroad, Oldham. Tickets will be ready shortly, and available for friends at 2/- each. They must be got through the Secretary. The winners of the silver cups are Mr. John Garner (Lancashire Cup), Mr. John Rukin (Lizard Cup), Mr. L. Haslam, gold medal for Lancs., Mr. Wm. Lawton, Lizard gold medal. Several more important items were dealt with, including the standard show cages, which are far from satisfactory, and which will come up at the next meeting. The meeting then closed with a vote of thanks to Mr. Garner for presiding. Fanciers, both new and old, in the Lancashire and Lizard varieties are requested to apply for particulars and rules of this old and original society, and the Secretary will be pleased to supply them.—H. OLIVER, Sec., 35, Hadfield st., Glossop.

TAMWORTH AND DIS. C.B.S.

Meeting, 16th inst., Mr. M. Hatton read a paper on "Pairing and Breeding Norwich," of which he is the proud possessor of several winners of his own breeding. He enlarged upon the subject by producing a full-rigged single breeder, and answered many interesting questions to the younger members. At the close Mr. D. Adcock proposed a vote of thanks to Mr. Hatton for his instructive and interesting lecture.

BRADFORD (EAST) O.S.

Meeting held March 5th, Mr. G. R. Rushworth in chair. Mr. C. Cowgill gave an interesting address on the breeding and rearing of Yorkshire Canaries. One interesting point taken up by some of the younger members was, that better results were likely to be obtained through pairing two good stock birds together than by pairing two show birds, as he thought that the strain which show specimens had to go through during a show season would be detrimental to the offspring of that particular pair. Opinions seemed to differ on the subject, as some rather fancied pairing two good show birds together—providing that any weakness found in one was counteracted by the other. A vote of thanks was accorded Mr. Cowgill.—H. HILL, Hon. Sec.

CHESTERFIELD AND DIS. F.A.

Annual general meeting, held Wednesday last, at the Carlton Restaurant. Mr. E. D. Gladwin (chairman) presided over a fair attendance. The balance-sheet was very favourable, showing a sum of £25 in hand. Dr. Goodall was elected president for the ensuing year, and the vice-presidents and committee were re-elected with slight alterations and additions. Mr. Black, who has proved a hard-working secretary, resigned that position, and was warmly thanked for his work. Mr. J. J. Dooley, 39, Alexandra-rd., Chesterfield, who has been assistant secretary from the commencement, was elected in Mr. Black's place, with Mr. W. Hartley as assistant secretary. Mr. E. D. Gladwin, who held the position of treasurer and chairman, resigned the former office, and was re-elected chairman of the Association, and Mr. C. P. Short was elected treasurer. It was decided to hold an open show of cage birds in the Market Hall in October (date to be fixed).—J. J. DOOLEY, Hon. Sec.

BRISTOL C.B.S.

Members turned up in good numbers at the monthly meeting, held on the 6th inst., and were well rewarded by hearing a most instructive and interesting lecture on British birds by that well-known fancier, Mr. W. G. Bull (chairman). The lecture was preceded by a business meeting, the most important item being the selection of new headquarters. It has been felt for some time that the room kindly placed at our disposal by the landlord of the Horse and Groom Hotel was not of sufficient size to accommodate the continually increasing number of members, so it was decided to select larger and more central headquarters. This, I am pleased to say, has been done, the landlord of the Crown Hotel, Lower Castle-street, kindly placing a room at our disposal. In this room were found many good points that were desired. Most important, the entrance is almost entirely private. It is of good size (and very comfortable), seating at least 200. In future all meetings will be held here. It was decided that our first annual show he held in November, dates, etc., to be published later. Another well-known fancier, Mr. E. A. Lovell, joined the society. Mr. W. H. Manley (treasurer) kindly consented to give a lecture at our next meeting on pairing and general management of Canaries during the breeding season. All fanciers are welcome. Meeting nights, the first Wednesday in every month, at the Crown Hotel, Lower Castle-street, near Old Market, at 8 o'clock sharp.—J. MUNRO, Assist. Sec.

SELLING SPLENDIDLY.

F. CARL,
154, Fleet St., London.

BATTERSEA AND DIS. C.B.A.

Meeting March 6th. The Secretary gave report of Annual and Pair Show, which showed a profit of 9s. 11d. Messrs. Whiteman, Wagdin, Found, Wall. Wilcox, Daines were elected members. Mr. Robson gave his promised lecture, and by the questions asked deep interest was shown in a very interesting lecture on "Preparing for Breeding." A vote of thanks was accorded to Mr. Robson. Allen Silver, Esq., will, at next meeting, give a lecture on "Some British Birds."—F. EASTERLING, Hon. Sec.

SALE OPEN O.S.

Meeting held March 11, at the Sale Hotel, when rules were considered. The following officers were elected:—Auditors, Messrs. Stanford and Plant; Assistant Secretary, T. Eilingham; Committee (with power to add), Messrs. C. H. Smith, J. Leigh, T. Harrison, J. Hurst, W. Smith, and F. Field. It was decided to join the Cage Bird Union. Seven new members were made. Mr. T. Harrison (Altrincham) will deliver a lecture on Monday evening, the 25th inst., entitled "Seeds and other Foods."—GEO. F. HARDCASTLE, Sec.

INVERNESS O.A.

Committee meeting of above, in the Crown Mission Hall, Washingtou-court, on Friday, March 1st. There was a large muster of members present. The following were appointed judges:—James Sandison (Aberdeen), Colin Ross (Forres), J. M. Kidd (Edinburgh), and Wm. Chalmers (Beauly). Mules, Hybrids, and British bird classes are open for colour fed birds at our next show, to be held on November 20th. The resignation of Mr. George McAlpine, vice-president, was accepted with regret. Members wished him all success in the land of his adoption; he goes to Canada at the end of the present month to fill an important appointment. Mr. George McKenzie was appointed vice-president (one of the best cage bird fanciers in the North); he is to read a paper on singing Canaries at our next monthly meeting, to be held on Friday, April 5th, when all fanciers are invited.

BEDFORD.

Annual meeting of the Bedford and Beds C.B.S., held February 28th. The proceedings commenced with a pair show in the afternoon, the principal winners being Mr. A. Keech, who captured two firsts and a second, and Mr. H. Gentle, a second and two thirds, all Norwich, these being the only two classes which filled, viz., yellow cock and buff hen, and buff cock and yellow hen. A very promising lot of pairs were shown, which augurs well for the coming season. The Hon. Sec., Mr. Wiggins, presented the balance-sheet, which showed that the society is financially sound, the balance in hand being over £8. It was decided to hold the annual show in the Town Hall on October 31st. After an excellent dinner, which had been provided by the Secretary, a short paper was read by Mr. J. C. Wilmot, on "The Breeding of the Norwich Canary," the remainder of the evening being spent in a social manner, the principal entertainers being Messrs. Markham, Arnold, Sharp, and Page, vocalists; a violin solo by Mr. Wilmot; and gramophone selections by Mr. Wilde. Miss Newman, A.R.C.M., rendered a pianoforte selection and accompanied the songs.

GRIMSBY AND DIS. C.B.S.

Meeting of the above society, March 13th. A good number were present, and several new members were enrolled. After the ordinary business, the open show was discussed, Mr. J. C. Barnes being appointed to judge. The show will be held on Oct. 16th and 17th. We then considered the question of affiliating with the C. B. Union. The latter part of Rule 17 came in for a good deal of criticism, but the opinion of the majority was that this part of the rule was the most vital point, and certainly should not be deleted. A first feather show was arranged for the 12th of June, when we expect to secure the services of some of our Hull friends to adjudicate. Mr. Stubbs consented to open a discussion on "Feeding and Rearing Young Birds" at our next monthly meeting. It is hoped that a good number will assemble to join in the discussion. As the society is open to all Lincolnshire it will be to the advantage of fanciers living in the county to enrol their names on our member list. The meeting terminated with a table show of British Birds. Mr. Clews judged: 1, Ellender, Linnet; 2, Peplow, Siskin; 3, Ellender, Bramhle.—H. EMERSON, Hon. Sec.

[Kindly note that matter for publication must be written on one side of paper only.—ED.]

ENGLISH AND WELSH B.F.C.C.

Now that the Palace Show is over the competition for season 1906-7 is at an end, with the following result:—£2 2s. Cup: D. Jenkins 43, J. H. Wilson 38, Thompson 36, Farrar 14, Hadwin 10, R. W. Pearson 6, Pennington 6, Brownlie 5, Hawkins 4, Waggstaff 4. Cash specials (Champion Section): J. H. Wilson 234, D. Jenkins 142, J. Thompson 114, Hadwin 62, Brownlie 40, J. Pearson 33, Tedstone 29. J. H. Pears 28, Pennington 28, Nicholas 23, R. H. Jones 20, Clinch 15. Wagstaff 15. R. W. Pearson 14, Walker 13, J. B. Moore 12, Hay 10, P. Jenkins 9, W. H. Jenkins 8, O. Connell 8, Cherry 6, W. H. Love 10. Hopper Bros. 5, Poole 3, Bowes 2. Cash specials (Novice Section): Farrar 104, Smart 43, E. M. Evans 36, Beaty 35, Hawkins 28, Hoggarth 27, Robertson 17, J. Moore 7, Woodman 6, Plaskett Bros. 6, Hancocks 5, Harrison 4. Novice Medals:—Dulwich—Farrar, 17; L.C.B.A.—E. M. Evans, 9; Manchester—Farrar, 19; Swansea—Hoggarth, 18; Whitehaven—J. Moore, 9; Morecambe—Plaskett Bros., 6; Barrow—J. Moore, 7; Gateshead—Smart, 24; Llanelly—E. M. Evans, 14; Palace—Beatty, 5. Will members check above, and communicate at once with the secretary in case of dispute? In case there is no dispute prizes will be paid out after March 30th.—S. HADWIN, Sec., 28, Pembroke-pl., Liverpool.

HARTLEPOOLS C.B.S.

Second annual general meeting at headquarters, March 5th. There was a good attendance. The Secretary presented his annual report, following which were suggestious for consideration for the forthcoming year. It was decided to throw open the Society's doors without radius limit, the subscription to be 4/- per year, with 1/- entry fee. A resolution was adopted that the Society hold a two-days' fixture on December 6th and 7th next. Members' next Feather Show was fixed for July 13th. The report was received with enthusiasm. The balance-sheet, presented by Mr. Williams, showed a slight deficit on the year's working, but was considered most satisfactory, taking into account the depressed and unsettled state of trade at the time of holding annual show. All the retiring officers were re-elected, with Mr. Easly (York-rd.) as Chairman of Committee, and Mr. Mustard as Vice-Chairman. The annual field day was fixed for Whit-Monday. During the evening Mr. Mustard presented to the Secretary (Mr. E. Woodhead) a large emblematical bronze medal, in leather case, as a token of his personal appreciation of the manner in which the secretarial duties had been carried out since the Society's inception. The election of new members brought a most successful meeting to a close.—E. WOODHEAD, Hon. Sec.

SINGING CONTESTS.

LEEDS.

The quality Linnet singing brigade mnstered in great numbers at the Old Bird House on March 16th. Mr. J. Booth gave three grand prizes. 1st, T. Stead; 2nd, P. Hohan; 3rd, C. Whitaker. Twenty-two birds competed. Judges, T. Crane, W. Naylor, and D. Clegg. The usual Sunday contest took place on the 17th. Nineteen birds competed for three prizes. 1st, P. Hoban; 2nd and 3rd, T. Stead. Judges, T. Crane and D. Clegg. The singing in both contests was excellent.—J. MELIA, Hon. Sec.

Members and friends of the Prince Albert Inn Linnet Association, Newtown, met on March 17th to compete for three prizes, given hy Mr. J. R. Saynor. There was a good attendance, and fifteen previous winning birds competed. Judges: E. Wood and J. Binner; timekeeper, S. Green. 1st, H. Allen; 2nd, F. Allen; 3rd, H. Hayes.—E. WOOD, Hon. Sec.

Week-end contest, at the Skinners' Arms, Buslingthorpe-lane, March 17th, when twenty birds competed for four prizes. The best singing ever heard at this house was given by the winners. Judge, G. Towers; timekeeper, F. Raper. 1st, F. Galley; 2nd, Slattey Kirk; 3rd, J. Clark; 4th, W. Reed.—C. HUNT, Sec.

Our next big match will be held on Easter Tuesday, when four good prizes will be given. Linnet fanciers, give us a bumping entry.—ADVT.

CARRBROOK.

Linnet singing contest held at the Don Inn, Dunlop-st., Carhrook. March 7th, when valuable prizes were competed for Twenty-four birds were hung, and some fine singing was heard. Result: Machin 1, Johnson 2, Sam Ketta 3.—J. E. ATTER.

SKINNINGROVE AND LOFTUS.

Week-end contest took place at White Horse Hotel, Loftus, when 17 birds were put in the window. Some spirited singing was heard. 1st, Dobson; 2nd, Rawson. J. Hart, judge. Timekeepers, J. C. Havelock and R. Burnett.—M. DOBSON, Sec.

STAITHES.

On March 16th the usual fortnightly contest took place at Staithes for three splendid prizes. F. Canby judged, when 1st, 2nd and 3rd fell to M. Dobson. J. C. Havelock, timekeeper.

WARRINGTON.

Week-end contest, at the Alexandra Vaults, Scotland-rd., Feb. 16th, when 24 good birds, all previous winners, competed for 7 prizes given by Mr. R. Thompson. The room was fairly well packed, and the singing was excellent, each fancier being eager to get his bird in order for Easter Monday, when members compete for prizes to the value of £6. The winners on Feb. 16th were: 1st W. Leah, 2nd J. Archer, 3rd T. Crawford, 4th D. Armitage, 5th D. Clare, 6th T. Armitage, 7th H. Stanway. The latter two ran a dead-heat. An open contest will be held on March 30th. Please note secretary's change of address.—G. TRYNER, Hon. Sec., 28, Cobden-st., Warrington.

LEEDS.

A splendid Linnet contest was held at the Skinner's Arms, Buslingthorpe Lane, Leeds, on March 3rd for four excellent prizes. Twenty-three good birds competed, and were witnessed by a packed house, highly delighted at the singing. Awards:—1st prize, J. Clark (Linnet king); 2nd, F. Raper; 3rd, J. Grainger; 4th, J. Clark. Judge, Mr. Tom Crane. Timekeeper, Mr. Tom Somers. A great contest will be held here on Easter Tuesday.—C. HUNT, Sec.

THE SHOWS.

BRIGHTON F. & F.A.

Monthly meeting and Show of the above held on March 7th, at the Unicorn Hotel. The following are the awards:—YORKS., MATCHED FOR BREEDING: 1, 2, Gibb; 3, Swaysland. NOR.: 1, Gibb. A.O.V.: 1, Mrs. Eyles. PAIRS, FOR MULING: 1, 2, Gibb. BRIT.: 1, Gibb; 2, Swaysland.—W. GREGORY, Hon. Assist. Sec.

LITTLEHAMPTON F.A.

Monthly Members' Show March 6th. There was a nice collection of birds, numbering nearly 40. The quality was good. This Association is making rapid progress in the cage bird section. Mr. W. R. Miles (Chichester) judged. He also gave a washing exhibition on March 13th.

LOUGHBORO' AND DIS. C.B.A.

Meeting, March 6th, Show of British birds, judged hy Mr. W. Judd, awards giving general satisfaction. 1, Wortley, Bullfinch, very good quality; 2, Taylor, Linnet, which if a little steadier would take a lot of beating; 3, Widdowson, Goldfinch, nice colour and marking. Mr. Judd afterwards gave the members some useful information, which was highly appreciated. Next meeting, March 20th, 7.30 p.m.—E. THORP, Hon. Sec.

BLACKPOOL AND FYLDE C.B.F.S.

Monthly show at the new Club Room, Raikes' Hotel, March 14th. A good entry was received for the five classes, and some very nice birds were shown, the winners in each class being regular toppers. Mr. Geo. Young judged. GOLD. OR BULLFINCH: 1, Lightbown; 2, Riding; 3, Senior. LINNET: 1, Boardman. A.V. HARD: 1, 2, Boardman; 3, Atkinson. SOFT: 1, Kirkham, 2, Senior; 3, Boardman. MULE OR HYB.: 1, Senior; 2, Lightbown; 3, Boardman.

YORK C.B.S.

The above society held on March 11th a very interesting Table Show of British birds, at All Saints' School Rooms. Three classes were provided, Goldfinch, Bullfinch, and A.O.V Hardbill. Although not large in numbers, the quality was A1, and some of the winners will do their owners honour in open competition later on no doubt. During the judging the usual monthly meeting was held. Mr. A. Richardson being in the chair. Two new members were elected. Mr. T. Boyle judged, and his awards were very satisfactory. GOLDFINCH, BRIT.: 1, Pickering, a stormer, good whites, nice square blaze, and well shown; 2, Chittenden, not quite so good in blaze, although a very nice Finch; 3, Pickering, lacks polish of leaders; vhc, J. Pickering. BULLFINCH: 1, D. Hunter, capital Bully, well cut cap, nice back and wings, a good win; 2, White, very nice, but not the polish of the one in front; 3, Hunter, good third; vhc, Chittenden. A.O.V. HARD.: Grand class; 1, White, Chaffinch, regular knock-out, good all over, easy win; 2, D. Hunter, Greenfinch, grand bird, polished like satin; 3, Hunter, Brambiefinch, grand bird; vhc, Sissons; hc, Hunter; c, Sissons.—A. WAUD, Assistant Sec.

WINCHESTER F.F. & C.A.

The entries in the cage bird section of the above society's Show were highly satisfactory, there being a fine array of excellent Norwich and Yorkshires, also many birds of first-class quality in the British and Mule classes. Mr. G. Gamble read an interesting paper on cage birds. An open judging competition was arranged by Mr. F. Cave-Baker, who gave a special prize to the winner, a handsome Canary; this was won by Mr. F. J. Holmes, Mrs. Tutt being second, and Mr. Howell third.

NOR. A.V.: 1, 2, Schneider; 3, Miss J. P. Day; vhc, Russell; hc, Watson; eleven entries. YORKS.: 1, 2, 3, hc, Gamble; vhc, Schneider; eight entries. A.V. BRIT.: 1, 2, Huntley; 3, Mrs. Howell; vhc, Russell; hc, Watson; seven entries. A.O.V.: 1, Huntley; 2, Russell; 3, vhc, Mrs. Whitmore Smith; five entries.

SOUTH LONDON C. & F.A.

The above held a successful Pair Show at the Royal George, New Cross, S.E. Mr J. Robson judged. The Norwich class was a feature of the Show, Mr. A W. Hollands winning special for best pair in the Show with his L. and P.O. winners, and Mr. F. Bizley winning special for next best with a pair of Crests, the Crestbred hen in this pair standing well out with plenty of feather. Mr. S. Harriss won special for best pair for muling. Thirty-four pairs were entered. NOR. (13): 1, spl, vbc, hc, Hollands; 2, c, Males; 3, Biss. CRESTS: 1, spl, 2, F Bizley; 3, Spowage. YORKS.: 1, 3, vhc, Males; 2, hc, Done A.O.V.: 1, Johnson. MULING (7): 1, spl, Harris; 2, Spowage; 3, hc, Johnson; vhc, Males; c, Munday. POINTS CUP, 1907: Males 28, Johnson 15, Hollands 14, Bizley 13, Spowage 11, Donel 9, Harriss 7, Biss 5, Munday 2.—G. A. JEFFERYS, Hon. Sec.

PARTICK AND DIS. C.B.C.

Monthly meeting on Thursday, March 14th. The following new members were admitted: J. Graham, J. Kidd, A. Wilson, C. Newgreen, G. W. Gow, and A Bergman. A show of muling pairs was then proceeded with, when 40 pairs faced the judge, Mr. James Laurie (Govan). His awards gave general satisfaction PAIRS FOR HYB. BREEDING: 1, 3, 6, Wilson; 2, Miller; 4, spl, Cochrane; 5 spl, Noddings; 7, spl, Graham GOLDFINCH AND CAN.: 1, Wilson; 2, Miller; 3, 4, 5, spl, McRobbie; 6, Todd; 7, Brown. LINNET AND CAN.: 1, spl, Miller; 2, spl, D. Graham; 3, Newgreen; 4, Cochrane; 5, 6, McAlindon. GREENFINCH AND CAN.: 1, Miller; 2, Graham; 3, Cochrane; 4, Lafferty; 5, Noddings; 6, spl, Henry; 7, Todd. A.O.V.: 1, 2, Miller; 3, Wilson; 4. D. Graham. A vote of thanks to Mr. Laurie for judging brought the meeting to a close. Next meeting, Thursday, April 11th; show of British Birds. We are still open for new members.—ANDREW MILLER, 3, Stephen-ter., Anniesland.

LEICESTER C.B.S.

Annual Pair Show, held March 2nd, at Hare and Pheasant Hotel, and it proved a great success, upwards of sixty pairs being on show, whilst many of the exhibits were fit to hold their own in any competition. Mr. W. Stevens officiated as Canary judge, and Mr. T. H. Ride took the Hybrid pairs, and they got through them in masterly manner. Mr. J. Heighton, the worthy secretary, had everything well in hand, and there was a good attendance of visitors. CLASS 1 (13): 1, Hartshorn, yell. cock, grand size and shape, lovely quality, charming buff hen, feathered like wax, nice short wings and tail; 2, Edwards, large var. yell. cock, extra good colour, nice type, nice short cobby buff hen; 3, Marriott, wonderfully large var. yell. cock, grand colour, matched to really grand hen; vhc, Gray; hc, West; c, Marriott. CLASS 2 (11): 1, Edwards, splendid clear buff cock, grand shape and colour, short cobby yell. var. hen of splendid quality; 2, Marriott, eye marked buff cock of good shape and quality, grand var. yell hen; 3, West, clear buff cock, good head and body, eye and wing marked yell. hen, a nicely matched pair; vhc, Gray; hc, Hartshorn; c, J. Heighton. CLASS 3: DOUBLE YELLOWS: 1, West, large clear cock and var. hen. CLASS 4: DOUBLE BUFFS: 1, Edwards, grand clear buff cock, lovely var. buff hen. NOVICE: CLASS 7 (7): 1, Lowe, grand clear yell. cock, short cobby buff hen of lovely quality; 2, Heighton, cap and neck marked thick set yellow cock, clear buff hen; 3, Harrison, ticked neck large yellow cock and cobby clear buff hen; vhc, Heighton; hc, Archer; c, Morris. CLASS 8 (2): 1, Archer, cap and wing marked buff cock, good quality and feather, and nice var. yellow hen; 2, Lowe, buff green cock, very good clear yell. hen. CLASS 9: DOUBLE BUFFS: 1, Lowe, grand clear cock and good quality var. hen. CLASS 10: CAN. MULE (15): 1, Heighton, charming cock Siskin, good clear yellow hen; 2, Archer, nice Goldfinch, splendid blaze and wings, good yellow hen; 3, Hunt, another good Siskin, and nearly green hen; vhc, Archer; hc, West PAIRS. HYBRID BREEDING (14): 1, Whitmore, cock Redpoll, a regular little swell, and champion hen Bully; 2, Hartshorn, really good Siskin, and a wonderful hen Redpoll; 3, Heighton, lovely Greenfinch, and a good Bully hen; vhc, hc, West; c, Hunt.

HEMSWORTH.

You will be pleased to hear, writes J. P. Carter (Ackworth Lodge), that one of our great mining villages has taken up the fancy of cage birds, in good earnest—viz., Hemsworth, near Pontefract. They had their first Show recently, when the entries numbered 68 in nine classes. The silver medal for best bird in Show was won by my champion Song Thrush. The judge was Mr. Ambler, of Bradford. The Society is going to have Members' Shows.

PAIRING-TIME ANTICIPATED.

BY WILLIAM COWPER (1731-1800).
Author of "John Gilpin."

I shall not ask Jean Jacques Rousseau
If birds confabulate or no;
'Tis clear that they were always able
To hold discourse, at least in fable;
And e'en the child, who knows no better
Than to interpret by the letter,
A story of a cock and bull,
Must have a most uncommon skull.
It chanced, then, on a winter's day,
But warm, and bright, and calm as May,
The birds conceiving a design
To forestall sweet St. Valentine,
In many an orchard, copse, and grove,
Assembled on affairs of love,
And with much twitter and much chatter,
Began to agitate the matter.
At length a Bullfinch, who could boast
More years and wisdom than the most,
Entreated, opening wide his beak,
A moment's liberty to speak;
And, silence publicly enjoin'd,
Delivered briefly thus his mind:
My friends! be cautious how ye treat
The subject upon which we meet;
I fear we shall have winter yet.
A Finch, whose tongue knew no control,
With golden wing, and satin poll,
A last year's bird, who ne'er had tried
What marriage means, thus pert replied:
Methinks the gentleman, quoth she,
Opposite in the apple-tree,
By his good will would keep us single
Till yonder heaven and earth shall mingle,
Or (which is likelier to befall)
Till death exterminate us all.
I marry without more ado:
My dear Dick Redcap, what say you?
Dick heard, and tweedling, ogling, bridling,
Turning short round, strutting, and sidelong,
Attested glad his approbation
Of an immediate conjugation.
Their sentiments, so well express'd
Influenced mightily the rest;
All pair'd, and each pair built a nest.
But though the birds were thus in haste,
The leaves came on not quite so fast,
And Destiny, that sometimes bears
An aspect stern on man's affairs,
Not altogether smiled on theirs.
The wind, of late breathed gently forth
Now shifted east, and east by north;
Bare trees and shrubs but ill, you know,
Could shelter them from rain or snow;
Stepping into their nests, they paddled,
Themselves were chilled, their eggs were addled;
Soon every father bird and mother
Grew quarrelsome, and peck'd each other.
Parted without the least regret,
Except that they had ever met,
And learn'd in future to be wiser
Than to neglect a good adviser.

Moral.

Misses! the tale that I relate
This lesson seems to carry—
Choose not alone a proper mate,
But proper time to marry.

SPRATT'S

COD LIVER OIL

CAGE BIRD FOOD

FOR

Young Cage Birds from the Nest.

Mr. WM. HIRD writes:

HIGH STREET, HANGING HEATON,
nr. DEWSBURY, *August*, 1906.

"I am highly pleased with your Cod Liver Oil Cage Bird Food. It is a most suitable food for the birds, and gives good results, both in the rearing of the young birds and in the production and quality of the feathers, and I shall recommend it to my brother fanciers.

Sold by all dealers in **3d.** and **6d.** Tins; post paid **6d.** and **9d.**; 7-lb. Bag, **2/6** or post paid, **3.2.**

Send postcard for Samples, also **Free** Booklet on "Canary and Cage Bird Rearing."

SPRATT'S PATENT, LTD

24 & 25, Fenchurch Street,
LONDON, E.C.

THE YOUNG NATURALIST.

Prizes of 1s. and two of 6d. each will be given for respectively the best and two second best cuttings or original hits about birds. Competitors must be children under sixteen years of age. All efforts must be briefly and clearly written, and ON ONE SIDE OF THE PAPER ONLY.

Two stars indicate the Winning Contribution; one Star the runners up.

When the eventful day came Peter was expecting his Bullfinch, because he had asked and obtained his parents' permission to accept the much desired gift. The cage was ready. It was a metal one, prettily enamelled in white and green, and it had been inhabited by a pair of Canaries belonging to Peter's mother, but these had been removed to more suitable breeding quarters. The cage was 18in. long and 12 wide; a fair size for a bird who was to be allowed to fly about the school-room or greenhouse every day. Two perches were placed low down across the cage, one opposite the seed pan, the other in front of the water cup; while another pair were fitted higher up and nearer together, so that Bullie could hop up and down from one to the other when he felt disposed for exercise. In the seed pan was a mixture of canary seed and summer rape, and on the floor of the cage was coarse grit, and a plantain plant pulled up by the roots from the roadside. "Garibaldi" was to have hemp seed, too, but Peter kept that apart, as he meant the bird to learn to take it from his fingers. When the cage was quite ready Peter ran to his mother and asked, "Is it nearly tea-time, mamma?" "Peter!" exclaimed his astonished mother, "it is barely half an hour since you had your breakfast. If you are so greedy I shall not let you have the cake at all." And that was a terrible threat, for the cake was all iced with delicious pink and white sugar, and round it were ten little candles of different colours—ten, because Peter was ten years old that day, and the candles were to be lighted up at tea time. Peter gave a sob, and answered, "It isn't the cake I was thinking of. But Bullie's cage is quite ready, and Charlie said he would bring him when he came to tea. Whatever can I do till then?" Peter's mother replied, "Your sisters are going for a long walk into the country. You go with them, Peter, and take your new flower-tin and fill it full of green stuff for your Bullfinch. He will relish blackberries and elderberries and privet, and shoots of hawthorn and hazel and wild cherry or plum, and also the flowers of dandelion and the common burnet; almost anything you can find in the hedges will suit him, so long as it is not poisonous. Take this bread and chocolate with you, and then you need not come home till four o'clock."

"Our Parrot.

She is an "African Grey," with a lovely red tail, and about five years old. Like most of the Parrot kind, she is very talkative and sensible, and knows when we speak to her, or when you are talking about her. If there is anyone in the house, she talks, laughs and whistles as long as they are there. I will name a few things she says, such as, "Hullo, what's the matter then, eh?" "You dirty old bird." "What be going about then, eh?" "Look out!" "Good bye." "Good night." "Polly wants her nut." She calls "Father" and "Mother," and spells "Bristol," etc. She calls both the cat and dog, and says to the dog, "Go back," "Lie down," "Get out," "Come on here," and laughs at them. We all like Polly so well that we would not part with her for anything. —Sent from HILDA SULLY (age 11), 44, Wellington Road, Bridgwater, Somerset.

*Teaching the Bird to Sing.

Father brought home a young Mavis, which he picked up in the country last summer, and, as it was such a fine, healthy-looking bird, he thought we boys could bring it up nicely. So, when we came home from school, father said: "Donald" (age 5), "I've brought you a bird home, and I want you to see after it. I will show you how to feed it, and, if you are kind to it, it will sing to you by and by." Of course, he was delighted, but we could not seem to hold him at all. Shortly after, mother asked father to call him in to tea. Father heard him singing "Tell me the old, old story," and asked him what he meant making all that noise in the bird-room? His reply was, "I'm learning the bird to sing, father; you told me it would." The bird died next day, either through its efforts to sing the old hymn or through neglect. —Sent by AUSTIN THURGUR (age 11), Fair View Stores, Rock Estate, Oulton Broad, near Lowestoft, Suffolk.

*The Starling.

Few birds are more common in this country, especially during the winter season, than the Starlings. They usually build their nest about the month of May, in the holes of ruins, in Pigeon-houses, or trees. This nest is formed of straw, fibres of roots, and down; and the eggs, 4 or 5 in number, are of a pale greenish colour, These birds have a strong and powerful voice, and may be instructed to whistle several tunes, and even to imitate the human voice. They collect together and fly in large flocks, and usually feed on insects and worms. Their bill is yellowish, and the body black, with white dots. —Sent by R. GLEADHALL, age 13, 35, Pearson's Field, Wombwell, near Barnsley.

Order your "ANNUAL" Now.

ILLUSTRATED IDEAS

Under this heading we shall illustrate weekly some idea useful to the bird-keeper. Readers are invited to send us particulars of any novel and practical appliance of use in our hobby, either in cage, bird-room or aviary, with a rough sketch of same where possible. Every "Illustrated Idea" used in this column will entitle the sender thereof to a postal order for two shillings and sixpence.

No. 85.

A NOVEL NESTING RECEPTACLE.

Sent by Harold Rudkin, Belton, Uppingham.

I am sending you a rough sketch of a novel nesting place for some of the small foreign Finches. All you require is a small fish basket. Place a piece of wood in the bottom

A Novel Nesting Receptacle.

to spread out the sides. Then sew up the top and cut a small hole in the side for purposes of exit. This, when hung in the aviary, forms an excellent nesting place for many of the smaller Finches.—H. RUDKIN.

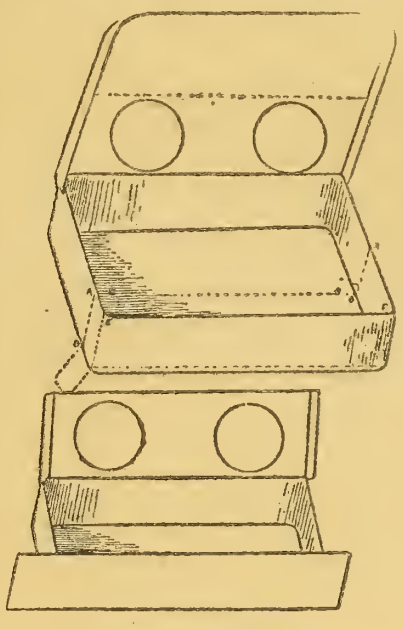
No. 86.

A SIMPLE SEED TIN.

Sent by W. R. Mumford, 4, Albert Road, Plymouth.

I am sending a simple idea in the way of a seed tin, which has proved very useful to me, especially where mixed seeds are used for fresh caught birds.

Take a cigarette tin which you find measure 4 ins. by 3 ins. by ⅝ in. deep. Cut from A to



A Simple Seed-Hopper.

B and from E to F. Straighten out two ends from cut, which gives a ⅝ in. shoulder each side when turned up from C to D. You will then have a tin 4ins. by 1¾ins. by ⅝in. Cut the lid straight across and make two ⅝in. holes. Cut opening in skirting of cage the same as for an ordinary egg drawer. Open lid to blow off husks and refill. Place through skirting which will hold everything in position.—W. R. MUMFORD.

Contents of Birds' Stomachs.

The "Northern Whig," in its Nature Notes, printed one of the most interesting paragraphs imaginable to bird lovers and bird-keepers. It is an account of the different food found in the stomachs of birds during the month of January. We note that all the Owls eat mice; the Magpie, grubs, beetles, corn and seed; the Jay, grubs, berries and acorns; Blackbird, seed, spiders and chrysalids; Skylark, seeds of wild plants; Linnet, seeds and berries; Chaffinch, seeds, berries and kernels of fruits; Greenfinch, seeds, berries, wild fruit and worms. It will be noticed that both the Blackbird and Skylark (and by our own observation we can add the Robin) eat various seeds during the winter, also that the Finches do not confine themselves to seeds, but eat wild fruits, berries and worms. The Chaffinch (and we can also add the Goldfinch) eats kernels of fruits and nuts, when obtainable. If this list was extended during each month of the year, it would greatly add to our knowledge of the economy of wild birds, and help bird-keepers immensely in feeding them while in captivity.

JUDGES OF CAGE BIRDS.

The attention of Show Secretaries is directed to the following list of gentlemen willing to act as Judges. Terms for insertion on application.

A. AMBLER, 17, Lytton Road, Bradford. Judge of Canaries and Cage Birds. Life experience. 11 years reporter to the Fancy Press.
H. W. AXE, 55, Market Place, Doncaster. Judge of Canaries and other Cage Birds. Practical experience (Norwich and British speciality).
W. O BARLOW, The Aviaries, Malpas, Cheshire. Judge of Canaries, British Birds and Mules. Terms moderate.
J. C. BARNES, 149, Duncombe Street, Walkley, Sheffield. Judge of Canaries and Cage Birds. Long practical experience. Terms moderate.
W. P. BARNES, Judge of Canaries and Cage Birds. Life practical experience. Breeder and exhibitor. Reporter for Fancy Press. Commercial Road, Grantham.
GEO. BENNETT, 46, Wenlock Street, Luton, Beds. Judge of Canaries and Cage Birds. Thirty years' experience. Terms moderate.
W. A. COWGILL, 115, Washington Street, Girlington, Bradford. Judge of Canaries and Cage Birds. Over twenty years' experience. Terms moderate.
A. G. DAVIS, Judge of all Classes of Cage Birds. Long practical experience. Terms moderate. 110, Tib Street, Manchester.
T. DIXON, Pioneer Terrace, Bedlington Station Northumberland. Judge of Canaries and Cage Birds. Life experience.
J. DOBSON, 14, East Road, London, N. Judge of Canaries and Cage Birds.
J. W. DRIVER, (Adnitt & Driver), Gladstone Street, South Normanton, Alfreton. Judge of Cage Birds.
GEO. GARDNER, 11, Haverstock Road, London, N.W. Judge of all kinds of Cage Birds.
C. A. HOUSE, 82, Upper Walthamstow Road, Walthamstow Judge of Canaries, Mules, British and Foreign Birds.
W H. LINDLEY, 4, Summer Lane, Wombwell, near Barnsley. Judge of Canaries and Cage Birds only.
E. A. LOVELL, 19, Islington Road, Southville, Bristol. Judge of Cage Birds (all varieties). Life experience.
F. MARWOOD, 1, Barnard Street, Thornaby-on-Tees, Mules, British and Foreign, a Speciality. 17 years exhibitor. Terms moderate.

Do not neglect to give us your support.

Schedules from W. YATES GREGORY, Hon. Sec.

Mr. J. Hardcastle has removed from 16, Crossley Place, to 9, Devonshire Place, Skipton.

Earlston (N.B.) Annual Show is fixed for November 30th next, writes Mr. John Brockie, the Secretary.

If you want Budgerigars or nests for foreigners, see my ad. under Foreign.—Pearson, Greenwich.—ADVT.

A cage containing twelve Cape Canaries was sold recently at the Worcester (Cape Colony) market for 1½d., so it is reported.

Exhibitors who intend supporting Llandudno Show should hurry up. The Secretary informs us that entries are very short. Particulars will be found in our advertisement columns.

In your reference to my bird fanciers' establishment, it should have appeared as being at 13, Lowther Arcade, and not at my private address.—G. H. BARNWELL (Harrogate).

Mr. R. Halliday will lecture on "Pairing Yorkshires" before the Great Horton G.I.O.S., at the Church Schools, on March 30th, at 8 p.m. A cordial invitation is given to members of kindred societies.

Members and friends of the Bristol C.B.S. should note that in future all meetings of the society will be held at the "Crown Hotel," Lower Castle Street, on the first Wednesday in every month, at 8 p.m.

The Dudley F.F.S., at its last meeting, decided to alter the name of the society to Dudley and District Cage Bird Society, with headquarters at the Crown Hotel, Wolverhampton Street, Dudley, where the next meeting will be held on March 26th, at 8.30 p.m.

In last week's advertisement of that well-known breeder and exhibitor of the graceful Yorkshire Canary, Mr. W. H. Shackleton, of Bradford, our printer made this fancier's strain the "Poragon." If he ever takes up the Yorkie, he will doubtless soon learn to spell it "Paragon," as it should be.

I send out some of my copies of CAGE BIRDS (the special numbers) to the West Coast of Africa (the white man's grave), to a friend of mine, who is in the gold mines at Yarkwa, writes Mr. J. Kershaw (Llanrwst). I had a letter from him yesterday, saying that he had seven Parrots, which were caught in his bungalow.

A big bundle of recent testimonials reaches us from Mr. T. Pearson, of Greenwich Market, S.E., one and all speaking in terms of highest praise of the breeding husks for Budgerigars, Cockatoos, and other foreign birds supplied by this advertiser, and mentioning the successful results in regard to young birds since the writers adopted them.

The appearance of advertisements for appliances for the birdroom, stimulates bird-breeders into making suitable arrangements for their stock. The nest-tins, egg-drawers, and moss-racks of Mr. Yates, 5, Albany Road, Reading, are welcome as old friends, while his combined perch-holder and red mite trap is as good and simple as can be wished for.

I thank all inquirers who have replied to my advertisement. I will answer all who have sent me stamps, but cannot the others, as I am inundated with letters and cards. Have sold out nearly 40 birds since Friday, March 7th, and sent money back to more than one applicant for the same bird. CAGE BIRDS is a wonderful advertising medium.—G. H. BOOTH (Shaw).

The "Boston Herald," U.S.A., of Jan. 18th, contains a report of the cage bird show held in that important American city. We learn that Mr. Charles A. Murray, late of Edinburgh, Scotland, won 17 firsts, 10 seconds, cup for best bird, and "pot" for most points in the show, scoring all along the line in Canaries (Scotch, Yorks., Lizards, Greens and Borders), both in fed and non-fed classes, also in Goldfinches, Linnets and Greenfinches.

A most interesting programme has been arranged by the L. and P.O.S. for the coming season, including lectures by Messrs. J. Dobson, A. Silver, F. Finn, N. Gilroy; an essay competition on "Food and Feeding of Cage Birds," First Feather Show, judging competition, etc. The membership roll has a very promising appearance, and those who would like to join should communicate with Mr. H. Lambert Brown, 64, Manor Park, Lee, S.E.

Interesting to Exhibitors.

Exhibitors will be interested in a case—remitted from the High Court—which was heard on March 18th, by Judge Woodfall at Westminster County Court, Jonatham Grinham, of Tunbridge Wells, claiming £36 from the committee of the Richmond Dog Show of 1906. Plaintiff exhibited a retriever in the selling class, with a reserve price of £40. It was sold at the auction for £3 16s., the buyer, it is said, soon re-selling the dog for £25. The defence was that there was no reserve price His Honour held that the plaintiff was entitled to succeed. A mistake had been made, and plaintiff should not bear the loss, because the defendants were responsible for the error of selling the dog contrary to the contract, which was fully set out in the entry form. Judgment for plaintiff, with costs. A stay was granted.

Lurgan O.S. hold their Annual Exhibition on Dec. 13th and 14th, writes Mr. S. M'Collum, the Hon. Sec.

Torbay Ornithological Society have fixed their Annual Show for October 30th, writes Mr. E. C. Parnell, Hon. Sec.

Mr. A. T. Jupe is leaving Southsea, and in future his address will be The Volunteer Arms, Petersfield, Hants.

I consider CAGE BIRDS the best value offered to the public in the cage bird line.—W. MONTGOMERY (Ballymena).

The Annual Show of the Weston-super-Mare P.P. and C.B.A. will be held on October 31st, under C.B.U. rules. Mr. J. H. Payne will judge cage birds.—G. W. READ, Hon. Sec.

The Morriston and District C.B.S. will hold their annual show on November 21st next. There is every indication of this proving a most successful fixture.—D. JEREMY, Sec.

I am highly pleased with CAGE BIRDS as an advertising medium; I have received orders from London, Berwick-on-Tweed, Ulverston, and from all parts of Scotland.—R. MORRISON (Glasgow).

We have engaged as judges for Hartlepools C.B.S. Show, December 6th and 7th, Messrs. H. W. Battye (for the third year in succession) and J. Maddison (Newcastle).—E. WOODHEAD.

The Sheffield C.B.S. have secured the spacious Temperance Hall (an ideal room) for their Annual Open Show on November 8th and 9th. Messrs. A. Ambler and W. Vardy are the judges engaged.—BISHOP and PILLEY, Secs.

Mr. J. Crossley (late of Acorn Inn, Bramley) informs us that he has removed to 35, Dickinson Road, Blackpool, where he will be pleased to see old friends and make the acquaintance of new ones interested in the Fancy.

I have had a regular shoal of letters and postcards through one advertisement in your valuable paper, CAGE BIRDS. Have sold all the Finches, and apparently could have sold double the number.—F. P. DYMOND (Cardiff).

At the London and Counties A.C.B. meeting, on Thursday next, March 28th, at 8.30 p.m., at "The Bay Malton," Great Portland Street, W., Mr. G. Gardner will lecture on "The Norwich Plainhead and its Critics." Friends cordially invited.

We have fixed Saturday, November 23rd, for annual open and members' show of the St. Helen's Recreation F. and F.A., and have again been successful in securing Mr. Charles Houlton to make the awards.—J. SHUTTLEBOTHAM, Hon. Sec.

An interesting interview with Mr. T. H. Veale, the well-known West Country fancier, appeared, we note, in last Saturday's issue of the "Illustrated Western Weekly News." Mr. Veale has been elected chairman of the newly-formed Torbay Ornithological Society.

Through my last advertisement I have received over 70 orders for nest pans, appliances, birds, foods, etc. I received two orders from Guernsey, and several from Wales and Scotland, which speaks well for the wide circulation of CAGE BIRDS.—F. PERRY (Attercliffe).

The Welsh National Cage Bird Society have decided to alter the date of their First Annual Open Show to Oct. 30th and 31st, owing to the inability of the judges appointed (Messrs. Geo. E. Weston, J. North and J. B. Evans) to officiate on the date previously advertised. Fanciers please note.—S. J. NICHOLAS.

The London and Counties Association of Canary Breeders will hold a Show restricted to British birds and their Hybrids, also Foreign birds, at the "Bay Malton," Great Portland Street, W., this Saturday afternoon (March 23rd). Mr. A. Silver will judge. Fanciers will do well to pay this interesting show a visit.—ADVT.

Liverpool B.F.A. Dinner.

Please note, writes Messrs. Hadwin and Barrett (Secretaries) that, owing to the Liverpool Races falling on March 21st, the above dinner has been postponed till Tuesday, March 26th.

Red Mite Preventive.

Mr. Jas. Loughman, an Irish breeder, recommends the following preventive of red mite:—Before lining the nest, get a piece of camphor; scrape a little of it on to the leather, and rub it in with your fingers. This, he says, will keep away all insects.

A New British Bird.

The three examples of the Black Lark exhibited at the last meeting of the British Ornithologists' Club are said to be the first recorded examples for Great Britain. Two were captured in Sussex in January, one near Pevensey and one near Rye, and the other near Lydd, Kent, in February; and other specimens were also seen. It is thought they were driven over by stress of weather, which during January was exceptionally severe. The female of the Black Lark bears a strong superficial resemblance to the Skylark; but the male is very much handsomer, wearing a livery of black, though this is obscured during the autumn and winter months by rusty brown fringes to the feathers.

SHOW DATES FIXED.

To secure insertion in this column a guarantee that the show will be advertised in "C.B." to the extent of at least 25/- must be sent to our manager.

* Under the Rules of the C.B. Union.

*Oct. 4 and 5.—**Burnley.**
*Oct. 11 and 12, 1907—**Great Harwood.**

Dec. 14.—**Harrogate C.B.S.** (H.W.B.)

A Slump in Scotch.

At the Kilsyth Fanciers' Association meeting on March 16th the date of the Annual Show was definitely fixed for December 14th, writes Mr. A. D. Duncan, the Hon. Sec. The schedule was revised, and in the cage bird section the Scotch Fancy and Norwich Grizzle-crested classes were dropped. Judges left over for further consideration.

A Personal Explanation.

Messrs. Payne and Wallace (Bath) have favoured us with a reply to the letter of Mr. J. B. Housden, published in our issue of last week under the above heading. But in the meantime Mr. Housden has written us again to the effect that "this matter is now in other hands." We take this to mean that the matter is sub judice, and consequently we are not able to print the aforementioned reply of Messrs. Payne and Wallace.

Points About Bird Keeping.

The City of Bradford O.S. met on March 16th at the Travellers' Rest to hear a lecture on Canaries, by Mr. J. S. Clarkson (Halifax). The lecturer said that in his large experience of breeding Fancy stock, the breeding of Canaries as a hobby for a working man was the most remunerative. Mr. Clarkson then gave the following useful hints: As a breeding room, he preferred an attic. For inside of nest lining, as a preventative against red mite, Stockholm tar. Before pairing up he adds a little treacle to the drinking water of the hens. Get breeding stock into condition gradually, not forcing. He is no believer in rich egg food. Dealing with the ailments of birds, he recommended the following remedies: As a purgative, syrup of buckthorn; for inflammation, turpentine (outside application); for colds, tincture of aconite; low condition, cod liver oil.—P. STANSFIELD, Sec.

Mr. W. Mills has removed from 16, Stewart Street, New Hey, to 17, Bell Street, Oldham.

Your "Bird World Magazine" and "Annual" are a perfect treat.—F. YARDLEY (Highgate).

Mr. C. A. House has been elected to judge Doncaster Show on July 4th.

Mr. A. M. Baird, the secretary of the cage bird section of the Paisley O.A., has removed to 23, Neilston Road, Paisley.

Mr. D. Harwood, Hon. Sec. of the Accrington and District C.B.S., asks that all communications for him should be sent to 39, Craven Street, Accrington.

I had no fewer than 27 applications for the pair of Virginian Cardinals advertised in CAGE BIRDS last week. They were sold by telegram.—T. PEARSON (Greenwich).

I am of opinion your journal, CAGE BIRDS, is absolutely the king of all birdy journals. I find great pleasure in reading it.—E. DURANCE (Lincoln).

The Stockton C.B.S. Show will be held on November 9th. Mr. J. Bailey will judge Yorkshires; Mr. J. Stanger, Norwich, Cinnamons and Crests; Mr. J. Maddison, British and Foreign.

A pair of Great Bitterns have for some time been observed on an estate near Hertford. One has now, unfortunately, fallen a prey to the gun. The bird is a most rare visitor to the country.

At the annual meeting of the Paisley O.A., on March 15th, the whole of the officers were re-elected, excepting Mr. M. Kyle (retired), and to whose place Mr. Neil O'Donnell was elected. The balance-sheet shows cash in hand £1 4s. 9½d., and other assets £90 14s. The loss on the Annual Show is given at £9 17s. 3d.

Of the Western Counties O.S. one may truly say age does not wither nor custom stale its vigour. One of our oldest societies, it is also most up-to-date and progressive in its methods. The year just passed has been one of the best in its history. It has now a membership of 93, and its balance in hand was, during the year, increased from £34 6s. 5d. to £46 19s. 5d. In future the financial year will end in December, and not February as heretofore.

Mr. Jas. Brown (Bexley Heath) writes:—With great pleasure I write to thank you for the beautiful sketch (and, may I say, the very true likeness) of my Horticultural Hall winner, variegated 1906 dark Crest, which appeared in CAGE BIRDS on March 9th. I was greatly surprised and pleased when I found the before-mentioned picture of my gem. I have been a purchaser of CAGE BIRDS from its first number, and have watched with interest the great improvement of same.

A Social Evening at Newcastle.

We have received from Mr. J. R. Slack a rhymed account of a social evening recently held by the Newcastle Good Intent C.B.S. This, we regret to say, we are unable to cope with, owing to some of the lines being too wide for our columns. Mr. Slack's verse, however, has the merit—somewhat unusual in the Muse—of being definite in its presentation of facts, and we are able to gather from it that a very pleasant evening was spent by the members and their friends, and that full justice was done to the many dainties provided. We learn, further, that a presentation was made to the two Secretaries of the society, the precise nature of which we are unable to determine, though we are assured by Mr. Slack that the wives of those two officials will have no cause for regret. Dancing was engaged in during the evening, and we have our poet's authority for saying that Mr. Crawhall distinguished himself in this respect. We will permit ourselves to cull an extract in illustration of the fact:—

There was also Mr. Crawhall,
Of course he opened the ball;
And sang in the chorus of every song
That was sung within the hall.

CLUB NOTICES will be found on page 283.

"CAGE BIRDS" COMPETITIONS.

"All the Winners."

Never in the history of this journal have competitions attracted so many entries as those promoted in our recent Birthday and Crystal Palace issues. The task of deciding between the various solutions and contributions received has proved so lengthy and difficult, indeed, that we are unable to give more than the bare names of the winners this week. In our next issue we shall hope to print those contributions which caught the judges' eyes, and give other details of the various competitions, which, we think, will prove not without interest.

Children's Competition.

In the "Mixed Heads and Bodies" puzzle the proper positions of the various portions of birdie anatomy were: 1 on 6, 3 on 2, 5 on 8, 7 on 4, 9 on 12, 11 on 10. The first correct solution which came to hand (in accordance with the conditions) was sent by—

Master F. J. DUNN (age 14),
East Lodge,
Coxhoe, R.S.O.,
Durham,

who is therefore entitled to the half-sovereign prize.

Hybrid Guessing Competition.

Our plate of Hybrid "enigmas" seems to have lived up to its title. Mr. Norman confided to us that he thought he had supplied a nut which would take some cracking. But we doubt whether he anticipated we should have to announce

NOT A SINGLE CORRECT SOLUTION RECEIVED.

Yet very careful sorting of the answers sent in fails to reveal one containing the following: 1, Greenfinch-Bullfinch; 2, Siskin-Greenfinch; 3, Linnet-Canary; 4, Siskin-Canary; 5, Greenfinch-Canary; 6, Goldfinch-Siskin; which is the correct nomenclature of the specimens depicted in our plate. Any reader who claims to have given the birds correctly, as per this list, must notify us by first post Tuesday next, March 26th, when we will look fully into the matter. But please understand that "Bullfinch-Hybrid," "Greenfinch-Hybrid," and so on, cannot count; the full parentage must have been given in every case.

Rhyming Competition.

The competition for the sovereign for the happiest verse or rhyme "inspired" by the frontispiece of the Birthday supplement has brought out some excellent efforts. The winner is adjudged to be—

Mr. H. C. FARMERY,
252, Water-street,
Accrington, Lancs.

His contribution will be printed next week, with a selection from the runners-up.

A Scotch Translation.

In the Scottish edition of CAGE BIRDS, dated January 26th, we offered a prize of 10s. for the best rendering into plain English of a clever dialect poem, sent us by Mr. J. J. Steel, entitled "The laddie wha gaed birdin'." This prize goes to—

Mr. GEORGE MACALPINE,
Rosehall,
Ballifeary-road,
Inverness,

whose contribution will also appear next week.

Norwich Plainhead Judging Competition.

The entry received in connection with the judging competition held on the birds depicted in Mr. Norman's plate, "A Blaze of Colour" (which accompanied the Crystal Palace Show Number), is simply stupendous. To get through the pile upon pile of "award slips" sent in by readers has been a task of days, and, curiously enough, careful sorting has failed to reveal even one reader who sees eye to eye with the leading Norwich Plainhead judge who kindly consented to adjudicate upon the birds in the first instance. His placings were as follows:—

First E; Second, D; Third F; vhc, C; hc, B; c, A.

If any competitor claims to have placed the six birds in this order he must notify us by first post Tuesday morning next, March 26th, when we will have his claim gone into. In the meantime, we will ourselves undertake another careful sorting of the coupons and letters sent in.

A Useful Price-List.

One of the most complete price-lists of fanciers' requisites which has ever come under our notice reaches us this week from Mr. C. Roehl, 400, Edgware Road, London, W. It includes cages of every description, Parrot-stands, outdoor bird-shelters and nest-boxes, indoor aviaries, and every description of neat and useful bird-room requisites. The very full manner in which it is illustrated adds greatly to its value. The Roller Canary Fancy, in which Mr. Roehl takes special interest, is thoroughly catered for, and hints are given on the treatment of this popular songster. The price-list will be forwarded post free to readers who send a post-card for it, and mention CAGE BIRDS when writing.

VALUE FOR MONEY.

Another Great Rise in Circulation.

"C.B." still far and away paramount as the CHEAPEST and BEST advertising medium of all Fancy papers.

Different people have different ideas on the subject of cheapness. Some think an article cheap because it only costs them a few pence, and no matter how worthless or useless to them it may be. Others consider cheapness depends upon the ratio of value to price paid; and every business man or man of ordinary common-sense is believed to hold this opinion.

As "CAGE BIRDS" has this week passed the extraordinary figure of

44,000 COPIES,

a rise of another two thousand in circulation since last we made a pronouncement on this matter, it will be as well, perhaps, for us to point out to advertisers precisely what this means to them and to us.

At one time in our history we boasted a circulation of 15,000 copies, and our advertisement rate was "3 words a penny throughout." This meant that for every inch of space occupied by the private advertiser we received, approximately, 2s. 9d., and for this amount we provided the type-setting, clerical labour, and 15,000 inches of paper. Under our present scale we receive (on account of the rise in our tariff after 18 words) about 3s. 3d. per inch on all lengthy private advertisements, and the same amount as we received before, viz., 2s. 9d., on all advertisements under 18 words. That is to say, we now give a private advertiser 44,000 inches of paper, the clerical and manual labour checking and setting up 78 words of type, for the ridiculous price of 3s. A private advertiser in "C.B." thus paying less than

¾d. PER INCH

for every 1,000 copies in which his advertisement appears.

Will any practical man kindly inform us where the **profit** to us comes in? We give more than double the value, and receive less than a third more from a small percentage of advertisers. We can honestly say that were it not for the generous support we receive from the Bird Trade our mission in publishing a cage bird paper would come to a speedy conclusion.

We make this more or less personal explanation in reply to a letter received this week from one of our most esteemed Yorkshire breeders, in which he says: "'C.B.' is getting a little bit too grasping—the rate of charges for advertisement matter is considered almost too prohibitive to the general bulk of cage bird fanciers." Yet it is but the bare truth that were we to make our tariff two words a penny throughout on our present circulation we should be in a less advantageous position financially than we were when we had half the number of readers that we can claim to have to-day. So that if there be any "grasping," it is the hard-headed Yorkshireman who is doing it, and not "CAGE BIRDS." The Yorkshireman expects to have double value for the same price; we are to have double—in fact, treble—the amount of printers' bills, &c., to pay, while he can serenely go on paying the same advertisement rate as before. Fortunately he is in the minority; and even he is able to reconcile himself to reaching twice as many readers at a very little increase over past charges.

The case of contemporaries having lower charges is referred to. But our Yorkshire friend may be perfectly sure, if only from past experience and his knowledge of human nature, that as soon as ever those mediums could command anything like "C.B.'s" circulation, up would go their advertisement price to the figure they tried to obtain before and which they **still demand and obtain** from another and more successful source. Has our Yorkshire friend never heard of the fable of King Log and King Stork. How the frogs, discontented with a log of wood which they had made their King, deserted it for a Stork, which promptly gobbled them up. We do not flatter in comparing ourselves to a log of wood; but the tale will not be without instruction for such as can see the application thereof.

We have not the slighest illfeeling towards any of our Competitors; we are solely and wholly concerned with our own proposition. And when we claim to be the cheapest and best advertising medium, we do so upon open and guaranteed figures. We throw open our circulation books to the light of day.

The results obtained by advertisers speak eloquently, not only in the **glowing and unsolicited tributes of successful advertisers, but in the great number of advertisements received—considerably over 1,000 weekly.** And with the intimation that we are still able to give him better value than ever, our friendly encounter with the Yorkshireman must close. It is a financial problem for him to set himself to, which presents no difficulties in the solution for other readers at any rate.

WHICH IS THE CHEAPEST AND BEST?

44,000 Circulation Guaranteed

at 3 words a penny for 18 words, 2 words a penny after, in the recognised Bird Market—or an unstated concealed circulation, probably not exceeding 10,000 sold copies, at 3 words a penny throughout elsewhere.

We leave the answer confidently in your hands, oh friends, many and widespread, whose confidence in our capabilities and sincerity of purpose shows no signs of abatement, and who have helped us to that position of supremacy as the

FIRST AND FOREMOST CAGE BIRD JOURNAL

"CAGE BIRDS."

QUESTIONS & ANSWERS

DOUBTS AND DIFFICULTIES SOLVED BY SPECIALISTS.

Queries will be answered under the following conditions:—

(1)—*All questions must be clearly written in ink (or typewritten) on one side only of paper, and must conclude with either the correct name of querist, or a pseudonym, or initials.*

(2)—*The proper name and address in full of querist must always be written on a separate sheet of paper and enclosed with the query. In no case must the address appear on the query.*

(3)—*Queries intended for different specialists must not be written on the same sheet of paper.*

(4)—**Queries must not include** *or be included in orders for books, instructions re advertisements, or any other matter for publication.*

(5)—*The department to which the queries refer must be stated in bold letters on the left-hand corner of the query.*

(6)—*If an answer in the same week's issue is desired, queries must be posted to reach us by* **Monday's first post** *at latest. Queries will be dealt with in the order in which they are received, and only as space permits. The earlier queries are received the better attention they are likely to have.*

(7)—*Queries relating to illnesses of birds, except enquiries as to cause of death (for which see Post Mortems) will be answered by return of post on receipt of a postal order for sixpence and an addressed stamped envelope. Queries of an ordinary nature will be answered by post, if desired, on receipt of a postal order for one shilling and a stamped addressed envelope.*

(8)—*All who require letters of complaint written to advertisers must state grounds for doing so clearly and fully, and enclose a fee of sixpence to pay postage expenses, &c., otherwise their letters will not receive attention.*

(9)—*All queries must be addressed* **the Editor, "Cage Birds,"** *154, Fleet Street, London, E.C. Only queries so sent will be answered. Postcards are not admissible.*

NOTE.—Readers are requested to carefully study past numbers and current issue before submitting questions. By doing so they may save trouble and unnecessary repetition.

THE following gentlemen represent CAGE BIRDS staff of **ADVISORY EXPERTS.** Queries must in no case be addressed to any of them individually, but to the Editor.

CANARIES.

NORWICH PLAINHEADS.

Answered by J. H. PAYNE.

Early Pairing (A. Jones).—I should advise you to wait another fortnight at least before you pair up your two Norwich hens. You will find you will be far better off at the finish of the season. The fact of your hens having made a nest each for a fortnight and sat in them continually shows they are not yet properly fit for breeding.

Norwich Cock and German Hen (Young Beginner).—I should advise you to part your pair of birds, and put them together again in about a fortnight's time, and in the meanwhile let both have a little egg food every other day, and a good pinch of maw seed. Probably you will find, when you part them, that the cock will sing. Some cocks are very quiet and sing but little whilst with a hen, and some not at all.

Cock Removed to Cold Room (Anxious).—Your question is somewhat difficult to answer, as it is impossible to tell when a bird that is in a soft moult like yours will finish. Your removing him from the warm kitchen, where you have had him all the winter, to a cold room is undoubtedly the cause. I should advise you to put him back into the kitchen, as this may perhaps check him, and if it does not he will no doubt get through quicker than he would in your cold room. Feed him generously, and cover over at night with a warm cloth. It will be of no use your putting him with a hen until he has quite stopped moulting and is again singing stoutly. If you are anxious to breed from your hen, I should advise you to procure another cock if you wish to be on the safe side.

Laying Irregularly (D. M. D.).—The reason your hen has laid her eggs so irregularly is because you paired her up before she was properly fit; or she may be an old one. I do not think you will do any good with the clutch you speak of, so do not be disappointed. If she fails to bring any chicks, give her a rest for a fortnight or three weeks, and in the meantime feed her liberally. Let her have a little egg food every other day, and two or three times a week a good pinch of maw seed. Also give occasionally a spray of watercress.

To Produce Yellows (Norwich).—As you only want an ordinary pair of breeding Norwich you should be able to procure a good healthy pair for about 15s. Have a yellow cock and a buff hen, and these will produce you some yellows. There is no special variety of Norwich for producing yellows. All will do this if paired to a yellow on the one side. I rather fancy you want to breed clears, so procure a pair of birds that are quite clear, and you will then get a good percentage.

YORKSHIRES.

Answered by H. W. BATTYE.

Pairing Relations (D.B.).—No, I do not think it would be wise to breed with the birds you have, as I should expect your birds to deteriorate both in size and stamina. Ask some of your local breeders that are practical breeders of Yorkshires, and you will see what they have to say on the matter. Why not try and sell either the cocks or hens, and buy a couple to replace? Or you might be able to exchange them if you made your wants known in our advertisement columns. The best advice I can give you is not to breed with them.

Poor Condition (Hombre).—Get a little pure olive oil; catch the birds, and drop 3 drops into their beaks, hold the birds' mouths open until the oil has been swallowed; use a warm knitting needle, dipping it into the oil. Let the birds' diet be plain white canary seed, give daily a little milk sop, mixing with it 6 drops of syrup of buckthorn, and a little moist sugar, then sprinkle a pinch of maw seed over the lot; continue this treatment for a week and then substitute Parrish's Chemical Food for the syrup of buckthorn for another week or ten days, when I think you will find an improvement in the birds' condition. You might also with advantage give them 10 drops of glycerine and 10 drops of whiskey in their drinking water, fresh daily until the hoarseness abates.

CRESTS AND CRESTBREDS.

Answered by W. E. GREEVES.

Breeding Two Crestbreds Together (J. W.).—Is your object in mating two Crestbreds together to produce Crestbreds for the show bench? If so, let me point out to you that this is unnecessary, and a plan that should not be adopted: far better pair a Crest to a Plainhead (Crestbred). To tell you whether or not you will get youngsters from two Crestbreds fit to show is beyond me; if the parents are up to the standard for Crestbreds, you may reasonably expect to get good birds from them, but if the parents are birds with small or pinched heads, and scanty thin head feather, then I should say no.

Mating Two Crests Together (G. R.).—Two Crests should not be mated together unless both of them have very large Crests, and perfect in every particular; you may from such a pair get one or two well-formed Crests, and some that are termed Mop Crests, the latter the more likely of the two. (2) Your Crest cock should be mated to a Crestbred hen; to mate with an ordinary Plainhead, not Crestbred, would mean you getting youngsters with very small crests. (3) I should advise you to mate your large Crest hen with a good Crestbred cock (buff), one with a good head and plenty of feather. If you are breeding with the object of producing show birds, I should not attempt to breed from a small yellow Crest cock; if you do, procure a big green Crestbred hen for him; even then the chances are that the produce would only be fit for cage songsters.

Breeding Crestbreds (Fortinaco).—By mating Crestbreds together you will get Plainheads, no Crests, but you will frequently get Plainheads from two Crests. The young from two Crestbreds may be mated to Crests, but by adopting this method, you are strengthening the cause of the Crestbred and weakening that of the Crests. If you desire to breed a bird of the Crestbred stamp, do so by continuously breeding from the Plainhead, and do not introduce the Crest at all; but, mind, if you do this, do not at a later date mate these with the Crests, because if you do, don't expect to breed good Crests.

CINNAMONS.

Answered by J. NORTH.

Cinnamon Crests (W.A.).—No, it is not at all an easy matter to breed Cinnamon Crested cocks and, as you remark, most of the Crests of this colour have been hens. They are nearly all buffs, very few yellows have been seen. You could obtain a Cinnamon Crestbred cock through an advertisement in CAGE BIRDS. Pair him to a yellow green crested Norwich hen, and then to a yellow Lancashire Coppy hen; a rough crested bird from two Coppies would answer well. The rest of the work is chiefly a matter of selection. Pick out of the progeny a Cinnamon hen, and match her to one of her half-brothers, or even to one of her own brothers, and so on.

Self or Foul Yellow, or Buff (Ambitious).—From your description I take it your bird is not self coloured, because one of the many meanings of the word "self" is "same." A self-coloured bird must be of the self-same colour—i.e., all one general colour. The light feathers in your bird's wings and tail, foul or spoil the self colour, and give rise to his description as being a foul-feathered Cinnamon. As you say he is big and bulky, in all probability he is a "buff" or "mealy," as it is very difficult to get yellow birds that are large. Most fanciers keep the large yellows for their own purposes. The crossed wings are a sign of coarseness, which is a fault in a Norwich Cinnamon. I should advise you to pair him with a self yellow Cinnamon hen; you are more likely to obtain success in this way than matching him to a Bullfinch hen, for the percentage of young ones from nests of eggs from a Bullfinch is very small indeed.

Chill from Bicycle Journey (F. Harrison).—Glad to know bird is recovering. You can now discontinue the syrup of buckthorn and substitute Parrish's Chemical Food in its drinking water. Go on with the diet of seed and bread and milk sop until the bird gets into fuller song. Give also some green leaves of watercress, dandelion, chickweed or groundsel; if you cannot get these give slice of sweet apple or boiled carrot. Hang up the bird in a place where he can get the benefit of sunshine and fresh air, but avoid draught or he will go on with his soft moult. A week or two of this treatment will in all probability bring him into song and breeding condition.

BORDERS.

Answered by J. PATTERSON.

Hen Ailing (T. W.).—The Border hen in question has evidently caught a chill on the journey, as you surmise, and you are treating her quite rightly, except for taking the seed away—that is to say, if you give milk sop one day and egg food the next. Let her have in addition a little scalded rape every other day, on the day you don't give egg food, and to every half-teaspoonful of the latter add three drops of Parrish's Chemical Food. Mix it well. Stop the drugs you are now using and give in their place six drops of glycerine and four of whiskey; see that she is covered up at night and kept away from all draughts.

Loose Moult (D. B.).—The strain of casting feathers all the season has evidently weakened your hen, and I would not advise you to rely on a successful season with her. You should procure another to fill her place. Treat her as follows, and if she should turn out all right, she will come in handy as a spare hen:—Give for the next 12 days 12 drops of tincture of quinine in drinking water, or until you see some improvement, then replace by ten drops of syrup of buckthorn. Give plain canary seed as staple diet, and every other day half a teaspoonful egg food, to which add three drops Parrish's Chemical Food. On the days you don't give egg food give a pinch each of maw, rape, and inga, and about twice a week a small piece of sponge cake with three drops of sherry on it. Keep covered up, warm, and free from draughts.

Songless (I. Stark).—From the description of your bird I think he is in perfect health, and you may have every confidence that he will fill the eggs. He has evidently had a chill and thereby lost his voice. His action in running along the spar with wings down and throat quivering plainly shows that he is in breeding form.

SCOTCH FANCIES.

Answered by R. WRIGHT.

Five Birds in Moult (M. of B.).—I am afraid your stove must have smoked when you did not notice it. I never knew one night's shifting to put five Scotch Fancies into the moult; the time would not be sufficiently long to cause it. Every year I lime-wash my room, also all breeding cages and nest boards, and I am never troubled with red-mite. I would advise you to feed well on egg food, and you will be in time for the breeding season in May. Buff birds will take five weeks and three days to grow wing and tail feathers, and yellow six weeks.

Bird with Faulty Wings (W. Hales).—This being a long and severe winter, I find plain canary seed not sufficient to support Scotch Fancies. I advise you to add to the usual diet a little egg food and a small quantity of maw seed. I think that with this extra nourishment, and due care in other respects, you will find your bird's wings come all right.

ROLLERS.

Answered by F. A. LESTER.

Singing Cages and Eggbinding (T.H.)—The best cage to keep a Roller cock for singing in is a box cage—that is, a cage with the front only open, as that confines the birds' attentions, and you get a better song. There are a great variety made by the cage makers who use our columns, and one about 12 in. square would be the best. Hens will not get eggbound if you feed correctly. Give a little apple and do not use much hemp seed. I, and several other fanciers, have come to the conclusion that hemp seed has much to do with this trouble. Roomy breeding cages will also help much.

Varieties of Rollers, etc. (E.H.S.).—What is the difference, you ask, between the various named varieties of Rollers, and may you keep one in an aviary with small Foreign Finches? The different varieties mentioned in your query only differ in these respects:—The first-named (Hummels) is only a trade name for the second named, viz., St. Andreasbergs. These are partially-trained Rollers that sing fair tours in the higher scales, and are sold at from 10/- to 21/-. Hartz Mountains are the untrained, free, loud singers of the Roller tribe, sold at 5/- to 7/6. Seiferts represent the higher class of Roller Canaries, and are called so after a German breeder of that name who did much to improve the Roller Canary in the years 1880 and 1890. A Schoolmaster is a Roller so called from his greater perfection of song and ability, or presumed ability to act as teacher to others. There is not any difference in the size or colour. The Seifert would suit you the best; consult the Roller advertisement column, and have one or two on approval, and your ear will decide for you. You would not get much song from a Roller kept with Foreign Finches. Kept by itself it would be a delightful addition to your foreigners.

MISCELLANEOUS CANARY QUERIES.

Answered by J. NORTH.

Rape Seed Sample.—I have lost three good Canaries, and in each case after a feed of enclosed seed. They were in splendid condition up to the day of eating it, when all showed the same symptoms of bowel trouble.—ANNA DUKE.

Such experiences would seem to show the lurking danger in the rape seed, and I do not relish the idea of repeating it on my own birds, so I have burnt it. Previously to doing so, however, I examined it and considered it sweet and good; my impression is that although your birds died after eating it they did not do so in consequence, but from some other cause.

Dried Yolk of Egg.—Am pairing Roller cock and Norwich hen. I have some dried yolk of egg which I mix with Softbills' food. Would this be suitable when mixed with crushed biscuit for rearing young Canaries? If so, in what proportion? In the "Canary Book" two kinds of prepared food are said to be perfect; one contains cod liver oil? Which is the better?—A. E. TRENT.

In my opinion dried egg must take an inferior position to moist, freshly-prepared egg food. In many cases I know the owners cannot give that constant attention to their stock which the supply of moist food entails, and in such cases no doubt dried egg and crushed biscuit make an excellent substitute. One teaspoonful of dried egg might be mixed with three or four "Osborne" biscuits, or with one or two "tea" biscuits, and moistened with a few drops of milk or water. I think the intention is that the plain food should be in general use and the cod liver oil food only occasionally.

Bird always Shedding Feathers.—My bird is always shedding its feathers even at this season. It eats well, but sings hardly at all, sitting motionless for hours.—THEODOSIA.

These symptoms show conclusively that the bird is in low condition; it may also be old or troubled with a diseased liver. It is only by taking prompt measures that it will be at all likely to recover. It should be kept in a box cage and in a warm room where there is plenty of light and air. In addition to seed let it have some bread and milk sop, also slices of sweet apple, boiled carrot, or salad, such as watercress, lettuce, groundsel, or chickweed. Into two tablespoonfuls of its drinking water mix half a teaspoonful of Parrish's Chemical Food. This must be given in a glass or china vessel.

Short of Feather.—(1) Hen Canary very short of feather, appears in good health. Seed diet, with egg food three times a week, sweet apple, and a little of Parrish's Chemical Food in water. Will she breed all right? (2) Green hen, small Crest, paired to Roller cock. What kind of birds shall I be likely to get?—F. YARDLEY.

(1) I fancy you are feeding too liberally, and why you are giving Parrish's Chemical Food is not stated. I should advise you to simplify the treatment. Red mite might have some blame in the matter. Have you examined the bird and cage by candle-light? That is the best time to see the army of parasites manœuvring. If found, smother bird and cage with Pyrethrum Insect Powder, and thoroughly cleanse the cage. She will probably breed at the usual time. (2) Small birds, patched with dull greenish black or brown plumage, some with rudimentary turn-crowns. Young cocks will very likely whistle "like Billy O."

No Feathers on Head.—Hen Canary has no feathers on head or neck. Have sprayed it with quassia and dusted it with insect powder, also rubbed head with lotion of glycerine, sulphur and milk. I am feeding on seed, egg food, and few drops of Parrish's Chemical Food, also fruit and salad. The feathers have begun to come round the bill, and she has laid two eggs. Is she fit to pair.—NOVICE.

You seem to have been treating your bird excellently. Nothing could be better, and the success which such attention deserves appears to be assured. Go on with this treatment for a week or two. I cannot understand why this hen should lay two eggs when in a cage by herself, unless she had previously been paired up or had been kept in a warm room where cock Canaries were singing. There is no reason that I can perceive why she should not soon be paired up, and in all probability she will go on in the usual way.

Lining Nest Pans (Beginner).—You can paste your felt nest linings in, or they may be fastened with joiners' glue, or with any of the cements that are recommended for joining glass or china. Let the hen also have a supply of moss and hay, then some doe hair, tow, or wool to finish off with.

Two Cocks Off Song.—Can you tell me how to make two 1905 cock Canaries resume their song; they have not sung since moulting? I have given them the things mentioned in back numbers of CAGE BIRDS, and they are well fed on seed, apple, and green meat, also Parrish's Chemical Food.—F. W.

You do not actually say that these birds ever did sing, and for all I know they might have passed into possession recently with the reputation of having sung last summer, but my impression is that they are hens. The only thing I can suggest is that you run them into separate cages. Hang them up in a place where they can get plenty of light and air, and if they do not come into song in a few days you may depend on it they never will. Cannot you get an experienced fancier to examine them? Many birds that are hens sing enough in their first year to make many people think they are cocks.

Colour Feeding.—At what time should I start? Do the young have colour food every day, and do I mix it with egg food? What is your opinion of the following recipe?—1 lb. tasteless pepper, ½ lb. turmeric, ¼ lb. sugar, 2 oz. olive oil. Am I right in giving green food same day as egg food?—SUNNY JIM.

There is nothing got except tedious work by colour feeding until just before the moult commences. When you buy and mix it yourself you know what you have got, and this knowledge cannot be improved upon by purchasing another's compound. Turmeric is no use; birds dislike it, and it is not so rich in the right tone of colour as bird pepper. Get a supply of this, of the deepest colour, rich in moisture, but do not mix it with sugar or oil. Mix a teaspoonful of it with some hard-boiled egg and crushed biscuit. Green food may be given in moderation at the same time.

BRITISH BIRDS, MULES AND HYBRIDS.

Answered by G. E. WESTON.

Rearing Young Blackbirds and Thrushes.—Would you be good enough to advise the best food and treatment of the above from the nest? Is there any special appliance for using to feed?—F.S.

Blackbirds and Thrushes are very easy to rear from the nest, and many people do so on nothing but bread and milk. Equal parts of stale bread and best ants' eggs (freed from rubbish), made very moist with new milk, would be a very fair food. To rear strong, lusty youngsters, however, the method I prefer is as follows:—Boil a fresh egg ten or twelve minutes, and, when cold, well mix with a fork the yolk and a little (say a third) of the white into two crushed Osborne biscuits; add to this a heaped-up tablespoonful of best ants' eggs (removing bits of stick and rubbish, if present), stirring all well together. Just before you feed, take the necessary portion of food and make it into a sloppy consistency with new milk. In hot weather (and at all times) be careful the food is always fresh and sweet. Feed a little at a time only, but very often, from dawn to dusk; and a feed after dark is not at all a bad thing. As the youngsters get a little older, cut a few mealworms into pieces, dip them into milk, and drop them into the nestlings' mouths. At this period, too, a great many fanciers add now and then a pinch of small, but sharp and gritty sand to the food; I often do so myself. It seems to act as a preventative of loosenss of the bowels (or diarrhœa). Give also at all times flies and like small insects; and live ants' eggs if you can get them. Young birds want feeding once an hour (do not "stuff" them at any time) at first; every two hours or so at later stages. Cease hand-feeding when they cease to "cry" to be fed, and are picking up food for themselves. Keep the young birds warm, cosy, and scrupulously clean. No special appliance is necessary for the feeding. I have used a large, blunted (with a pen-knife) match stick with every success; likewise a quill toothpick with all sharp corners removed. The handiest implement I ever possessed, however, was a little bone mustard spoon, which I cut to a suitable shape and different sizes at each end (handle and bowl), and smoothed off with very fine glass-paper. Different fanciers have different ideas though, and once used to a certain thing cannot feed with any other! I expect many, too, will be trying the glass syringe idea, shown in an illustration in the January "Bird World Magazine." Put the food well down at the back of the tongue, and always be careful not to bruise or lacerate the tender mouths of the nestlings.

What Seed? (K. C. Leishman).—The seed you send is dari. You ask if it is good for feeding cage birds. Why did you not say what sort of cage birds? It is all right for Doves; and such birds as the Hawfinch and Crossbill will sometimes tackle a little. But for the smaller seed-eating British birds it is practically useless, being too large and hard.

Skylark and Song Thrush (Novice).—Song Thrushes can only be accurately sexed by hearing them sing. Generally speaking, the cock is the slimmer bird of the two, with a longer, slimmer, flatter head, when viewed in profile; but these things are most uncertain guides. You ought to get it on song by giving it eight or nine mealworms daily, varied by cooked snails (immersed in boiling water for a time, chopped up, and just mixed amongst the soft food), and any other creeping things, and flies and other insects such as these birds delight in. Live food will be plentiful shortly; I met lots of snails in my walks across the fields last Sunday. Give your Lark plenty of insect food, too. If they do not sing as soon as the mild, sunny days put in an appearance, they must be hens, or else in very poor condition. Larks and Thrushes out in the open have been singing for some little time now; in captivity, for a month or two.

After Cross Moult (Pet).—The Mule is practically certain to feel the strain of the cross moult—a somewhat prolonged one, by all accounts. I can advise nothing better than a course of Allan and Hanbury's Byno-phosphates, which any chemist would procure for you. Put one teaspoonful in each two tablespoonfuls of drinking water—or, of course, half a teaspoonful in one. Give it fresh daily, and use a glass or china vessel, if possible, when administering it. Continue the treatment for a fortnight at least. The song will return, without a doubt, when a return to vigorous health is made.

THE CANARY BREEDING SEASON

Will soon be with us and all who contemplate cultivating Canaries for pleasure or profit, should immediately procure the Standard Work on Canaries :—

HOUSE'S CANARY MANUAL

PRICE ONE SHILLING. Post Free 1/2.

Superbly illustrated by the Champion Canary Artist, Mr. H. NORMAN. EVERY BIRD DEPICTED IS A VERITABLE MODEL, and shows the breeder what to aim for. Some idea of the popularity of this Practical Manual may be gathered from the fact that under the title of "The British Canary," it has passed its Third Edition entering upon a Fourth Edition of 5,000 copies under the new title of "HOUSE'S CANARY MANUAL." The following Summary of Chapters, etc., will show you how completely the ground is covered:

Aviaries and Cages.
Show Cages.
Perches.
Breeding Canaries.
The Young Birds.
Food for Nestlings.
Hens Refusing to Feed.
Sweating Hens.
Young Birds Dead in Shell.
Red Mite.
Clear Eggs.
Moulting.
Exhibiting.
Diseases (treated very fully).
Every variety of Canary is treated upon at length and illustrated.

Mr. HOUSE has thoroughly revised and brought this work up-to-date and incorporated a chapter on the "Roller or Singing Canary."

Send 1/2 now and secure a copy hot from the press.

F. CARL, 154, FLEET STREET, LONDON, E.C.

FIFTY COPIES of the Third Edition slightly soiled—9d. each to clear.

Opinion on a Greenfinch (Electrician).—I had a look over your Greenfinch. He is not at all a bad specimen, though there is not quite enough of him, and he is not quite the correct grass-green colour. The leaders had the measure of your bird somewhat easily in these two respects. It is the very yellow kind that take the colour food strongly. I like either a very light blue or very light green, or extremely dark green, for the show cage of a Greenfinch. Intermediate shades do not show Master Greenie off at all. Inside and wires should be enamelled alike. Suit your own taste as to which of the three shades mentioned you select.

Sand and Wild Seeds (G. W. Read).—The sample of sand you send is not sufficiently gritty. It is not unsuitable for use on cage bottoms, by any means, but an admixture of coarser, more shingly material would have to be made; or the latter (grit of suitable size) would need to be supplied in separate tins. Four to six of sand to one of grit would answer well. Ketlock is another name for charlock, a plant of the late summer and autumn, bearing yellow flowers (resembling a Primrose League badge), and lyre and oval-shaped leaves, and long, pea-pod shaped seed-pods, containing hot tasting seeds. Gold of pleasure has small globular seed-pods, yellow flowers, and arrow-head shaped leaves. Shepherd's purse has heart-shaped seed-pods, white flowers, and leaves also somewhat arrow-headed in shape. Cole (or colewort) has a yellow flower, oblong, wavy-looking leaves, with the seeds arranged in a row in long pods. Safflower I do not know as a "wild seed"; it is bought at seed shops, and looks exactly like a small edition of sunflower seed. It is quite impossible for me to definitely promise to send samples to readers; am always willing to do whatever I can to oblige them, but unfortunately my time is generally very fully occupied.

Birds in a Greenhouse (Lincoln).—I have very frequently given my opinion on the keeping of birds in a greenhouse; and it is invariably an unfavourable one. Yours (glass all round) is not at all a good type. If you decide to try the experiment, give the roof a strong coat of "summer cloud," or similar wash, to exclude direct sun rays; also, by all means, leave on the trailing rose tree which covers the roof in the summer time. That no plants requiring water are kept therein is a satisfactory feature. I advise you to get a truck-load (more or less) of the "sharp sand" that builders use, and cover the floor with it to a good depth. The surface you can rake over from time to time, and renew to the needed depth, as may be required. A pan of grit should find a place in the aviary. You could turn in from six to 12 hen Canaries (if you choose), and a half-dozen to nine cock Finches. No hen Britishers unless you reduce the number of Canaries and substitute two or three hen Bullies, when no cock Bullies must be included. You could hardly better this list: Goldfinch, Linnet, Redpoll (both Lesser and Mealy), Twite, Siskin, and Greenfinch. If you want to include a likely breeding foreign seed-eater or two, consult our Mr. W. T. Page.

Genuine Crosses or Not (Cymro Bach).—Most decidedly the Greenfinch-Bullfinch and Canary-Bullfinch crosses are genuine. But they are not easy to get; wherein, I take it, lies the chief charm of trying for them. I answered a very similar query to yours last week; see reply to "Buggins." The act of copulation takes place many times (as you say), yet the eggs which follow are unfertile just the same. But one never knows how soon that fertile clutch, which shall repay us for long waiting and many disappointments, may turn up. As I said last week, if we got 'em every time of asking they would no longer be rarities and no longer valuable. Take heart, and try again. Linnet-Greenfinch Hybrids are easily produced, as a rule; also Redpoll-Canary. Very large yellow hen Canaries are the best to produce exhibition dark Mules; a heavily-variegated yellow Norwich hen, for instance. She may be poor type (that is, slovenly in wing or tail carriage) and a bit loose in feather so long as she is very stout in frame. Pair to her the biggest and best-coloured cock Finches you can lay hands on. A good seed mixture for any Mules at this season of the year is:—Canary two parts, teazle one part, hemp and summer rape half-part each, maw and linseed quarter-part each. In the hot weather reduce the hemp and linseed, and increase the teazle. Any of the special Finch or wild seed mixtures advertised in our columns will make a good and acceptable change, given twice or so a week. A little sunflower seed once or twice a week would also be sure to be appreciated. Any of the usual green foods may be given, flowering groundsel (not coarse leaves), chickweed, shepherd's purse, dandelion, lettuce, watercress, etc. The three first mentioned may be given practically ad libitum. All Mules are very fond of shepherd's purse. Give your ailing Finches the sulphate of soda treatment I so frequently recommend. You must not ask so many questions at a time (three should be the limit) or you risk having to go without an answer. It does not give other readers a chance.

Larks Going Wrong (A. H.).—I consider your surmise to be quite correct. You do not give enough vegetable food, which would tend to regulate the bowels and prevent constipation. See the lengthy replies I gave an issue or two ago on the feeding of Larks, and follow the advice therein. Grated raw carrot is very valuable, and generally available; likewise cold boiled potato, mashed. Then you can mince up lettuce, rape seedlings, chickweed, cress, clover grass, etc., and mix amongst the soft food. Let them have plenty of insect life, such as mealworms, smooth caterpillars, spiders, wood lice, earwigs, flies, and similar things.

Linnet Wild (F. A. Moy).—I am afraid I cannot help you. You have tried hard, and if you can't get the Linnet steady—well, you can't, and there's an end to it. Some are quite impossible. At the same time, you have not had him caged any particular length of time. If so good a bird as you say, I would certainly keep him over a moult. He is hardly likely to Mule, however.

An Aviary Proposal (G. E. S.).—I don't like the 5 ft. at back 8 ft. at front idea; the reverse would be, and look, much better, I think. You will find it far better to make a shed at one end. Roof over 5 or 6 ft. at the east end; the end looking into the wired part should be boarded up for 2 ft. from the ground, and down to the eave at the top. Cover the floor of the shed with coarse gravel, or coase gravel and "sharp sand" mixed, which any builder will supply. An outdoor aviary, unless it be an extremely large and well-shrubbed place, is most unsatisfactory in winter unless a snug roofed and boarded shelter is provided. Your place will hold two to three dozen birds very comfortably, indeed.

Pairing for Mules (E. Poynter).—It is quite true that hen Canaries sing a little at times; hen German Canaries in particular seem prone to do so. But I am inclined to think your supposed hen is in reality a cock. The fact that she sings and also fights the cock Goldfinch through the partition wires, points very strongly to this being the case. If this is the case you can take no steps—except, of course, to provide another hen (a real one, this time). It is an error any dealer or fancier may at times fall into—to sell a cock for a hen—just as they no doubt at times quite unwittingly do the reverse thing. If "her" throat pulsates markedly (or swells out) when singing, you can bet on the bird being a male. If you examine the vent, too, and find it very prominent, instead of flat-looking, that will serve to clinch the matter.

What Bird? (W.L.V.).—Your description is really too "bald" for anything, and any attempt to name the bird from it is so much guesswork. You describe the colour of the beak; yet, apparently, the colour of the head and wings, and the manner of its markings, are not important enough to merit a mention! To take a plunge more or less in the dark, I should say the bird you have is a cock Chaffinch. If it has a sort of black hood over head and down sides of neck, it is a Bramblefinch.

Song Thrush Ailing. (Anxious). Your song Thrush may have got something accidentally lodged in the eye which gives rise to irritation (the running you mention seems to point to this). The latter will cause the bird to rub the eye on its perches, which might well account for both the bareness there and the growth. Keep the bird for a time in a cage without perches, covering the floor very thickly with peat-moss litter. Dissolve a small teaspoonful of boric acid in a pint of warm water, and bathe the eye with this twice daily for two days. Paint the growth with undiluted witch-hazel (from any chemist), using a small pencil-brush to do it with.

Mate for hand-reared Hen Twite (Hybrid).—Who hand-reared the hen Twite, I should be interested to know? Also where the nest was found. Hen Twites have never been known to do much in the breeding line in cages, I fancy; but I imagine this is due to the fact that few fanciers have given them a trial. They are not fashionable, in short, amongst Hybrid breeders. I should think the most likely mate for her would be a cock Linnet. But you say the "most suitable"; and here I should plump for either a Goldfinch or Siskin, as the progeny, if any, would then be likely to be handsome, and valuable from the show point of view.

Chaffinch Refusing Bath (Novice).—Chaffinches are very free bathers, as a rule, and I expect the neglect of the water by your birds arises purely out of nervousness due to their being but recently caught. Spray them a few times, if you like, or hang them in sight of a bird which enjoys its tub—goes into it and makes a splash. This may arouse in them a desire to go and do likewise.

Breeding Cage for Muling Couple (What Ho!).—The best cage, in my opinion, for a muling couple, is the double breeding cage sold by every up-to-date cage-maker. It is especially valuable for beginners. In size it should be about 3 ft. long by 16 in. high by 10 in. wide. I like to have two partitions for use down the centre—one partly wired (at the bottom), and the other of solid wood—so that one can slip in whichever may be necessary. The pairing and feeding have been frequently dealt with this last few weeks in both article and query columns. Any building which is perceptibly damp is not, in my opinion, a suitable place for keeping birds in.

Which Linnet? (W.V.N.).—I should choose the steadiest and stoutest-singing Linnet of the three, no matter whether house-moulted or red-breasted. At the same time, the house-moulted bird ought to be the one to stand ahead in these points.

Cock Canary and Hen Linnet (W.W.).—A cock Canary will certainly pair up with a hen Linnet, and the mules resulting from the cross will be good songsters. A hen Linnet, however, as maybe you are aware, makes hardly so reliable a mother as a hen Canary. Mules bred this way, too, never seem so large and attractive as those bred by the orthodox method of pairing, viz., cock Finch to hen Canary.

In Outdoor Aviary (A. Hall).—You can breed in a cage hanging on the wall of an outdoor aviary, but the birds flying about in the latter persist in flying on and clinging to the wires of the former, thus distracting and bothering its inmates. Very often, too, the cock bird inside gets at loggerheads with cock birds outside, and rows and fights through the wires are then frequent. Taken altogether, it is not usually a happy method. Greenfinch to Linnet is a likely mating. But Greenfinch to Chaffinch is a very unlikely one indeed; any young would be extremely valuable, though.

Goldfinch in Moult (J.B.).—Perhaps the fault lay on your side, if you don't mind me suggesting it. If the previous owner had been keeping the Goldfinch in a warm room, for instance, and you put him in a cold one, (or vice versa) the result would be to send him into a cross moult like a shot. This is a point one wants to ascertain when buying birds. You can now only endeavour to keep the bird's health up, to help him quickly over the trouble, and about the end of May he may quite likely be ready to fill eggs for you. Gather him all the young dandelion you can, and on every second day mix a teaspoonful of Allen and Hanbury's Bynophosphates in two tablespoonfuls of drinking water.

Concerning Mules (Queries).—A crested hen Canary can certainly be used for breeding Linnet of Greenfinch Mules, if you choose, and the young will be good singers. Plainhead hens are better, however; the average crested Mule is a funny-looking object at the best of times. A hen Goldfinch can be successfully mated to either a Linnet or Greenfinch cock, and the young Hybrids turn out smart little songsters; they sing very freely if trained under a good Canary, though, to my own way of thinking, this does not improve their song.

Two Hybrids (E.W.O.).—I duly received the dead body, and showed it to Mr. Frank Finn, who agreed that you were correct in describing it as a Hybrid between the White-headed Nun and the Spice-bird. He had no recollection of hearing of the cross before. Have you any others in your aviary; or was the ill-fated bird sent the only specimen? I shall hope to have the pleasure of seeing your presumed Canary-Bullfinch Hybrid at some time or other.

Hybrid Ailing (Cornwall).—From the symptoms mentioned, I believe a dose or two of saline medicine, and a change of diet for a time, would put the bird right. For one day dissolve as much sulphate of soda as will lie on a sixpence in two tablespoonfuls of drinking water. Repeat this twice, at daily intervals, if it seems necessary. Take away his seed for a time daily, and try to get him on to the following: Mix a teaspoonful of best ants' eggs (free from all rubbish, bits of stick, etc.), with a teaspoonful of crushed Osborne biscuit, make just crumbly moist with new milk, and sprinkle freely with maw-seed. After the saline has acted well, add half a teaspoonful of taraxacum (dandelion juice) to the same quantity of drinking water for a few days.

Siberian Goldfinches "Gone Home."—I have had two Siberian Goldfinches this season. One has just "gone home." What do you think of my feeding? Friends tell me they are hard to keep. Is this so? I bred good Mules last year from one.—A. McINNES.

Siberian Goldfinches have acquired a reputation for "going home," as you put it, quickly, but, really, I do not know that they are any worse than British Goldies in this respect. Look at the great number of fanciers who are continually complaining that they cannot keep the latter successfully. Possibly Siberians do not live quite so long as Britishers in captivity; but that is all, I think. If one breeds good Mules from them while alive, I don't see that one has a deal to grumble at; and they undoubtedly breed bigger and better Mules than British Goldies, when one has the luck to be successful. Your feeding is not to my own liking at all. You give far too much canary seed, which my own experience tells me is of small value as a food for Goldfinches. Siberian Goldfinches appreciate the same seeds and delicacies as our British Finch, but need indulging less freely with fattening, stimulating foods—especially so during hot weather. A good stock mixture now would be hemp and teazle, three parts each, canary two parts, and linseed one part. Give a little maw and niger frequently, also a good feed of white sunflower seeds (cracked if necessary)—not all at one time, of course, but one or other daily. Thistles, hard-heads, dandelion, flowering groundsel and chickweed, wild seeds, etc., are all good for them, and appreciated. Many Siberians are lost through wrong treatment when first bought, owing to the unfortunate inexperience of the buyer. They are immediately put in a cage with food and water hung outside, consequently they starve, or die of thirst, never before having seen a water-hole, much more put their head through one. Food and water should always be put inside to them, and it should be seen they get at the same. Inga (niger) seed is their staple food during importation, and they must have an unlimited supply of this and maw seed at first. When they have got the taste for sunflower seed (it comes quickly, for they are very fond of it, and it is a grand food for them) gradually wean them off the niger. Should a bird seem to droop at any time, give it at once a dose of sulphate of soda for one day; as much as will lie on a sixpence, dissolved in two tablespoonsful of water. Repeat the day after, if necessary. Follow this with a course of citrate of iron as a tonic, a tiny pinch (just a few granules) dissolved in the same quantity of water. Watch its effects on the bowels; if is constipating when given too strongly. Also, don't give grit freely at first. They will simply "gorge" it; and then comes trouble.

Concerning a Hawfinch.—Have just bought a Hawfinch, and would be glad to know the proper treatment for it. I believe it was imported, so I suppose I cannot show it in British bird classes. —BIG BEAK.

Your question is rather a delicate one. The best answer I can give you is to say that if you refrain from telling people that it is an imported bird, no one will ever be able to find out. If your conscience is lively enough to prevent you from entering the Hawfinch in a British bird class, all well and good. But between you and me and the gatepost, there is a lot of humbug talked about this question; anyone with the least inside knowledge of such matters could tell you of any amount of imported Woodpeckers, Nuthatches, Tree Creepers, Blue-headed Wagtails, etc., which have won heaps of prizes for owners who well know them to be imported specimens. As regards the feeding of your bird, the principal food for a caged Hawfinch is sound, plump, white sunflower seed. Given this, and a mealworm or two every day or so, the bird asks for little more. The mealworms, however, should be given direct from the fingers; a little patience, and he will take them fearlessly, so great is the bird's love for these squirming creatures. They are an invaluable agent in steadying a Hawfinch. The bird also appreciates hemp, linseed, canary, oats, and sometimes a little buckwheat, dari, groats, summer rape, small maize, etc. His powerful beak makes short work of beechmast, walnuts, plum and cherry stones, bawthorn, privet, etc., berries, and the like. One never need be fast for dainties acceptable to the Hawfinch. Green food they are not particularly keen on, but appreciate a little young lettuce, watercress, chickweed, shepherd's purse, also ripe apple, pear, etc., occasionally. They make an exception in favour of tender green garden peas, of which they are passionately fond, and these are especially good for young birds, given in the pod. They are fond of a bath, so let him have one whenever the weather is suitable. See his perches are of proper thickness, and if food and water hang outside the cage, see also that the head-holes are of proper size.

Thrush with Fits.—My Song Thrush has had several fits at odd times lately, which cause me some worry. He had a very long moult, but seems just commencing to sing. Is there any permanent cure, or ought I to let him fly?—A. T. JAYES.

Yes; there certainly is a permanent cure in many cases—in fact, I should say in most where the bird

is not an absolute physical wreck (if I may use the term) through gross mismanagement and bad feeding. You have fed your bird very well indeed, and no doubt weakness, due to the prolonged moult, is at the root of his trouble. Yet I see no reason why he should not pull round in time, and throw off the tendency to fits. Mix a half-teaspoonful of tasteless cod liver oil with his daily food supply. It is best to commence with a smaller quantity, and gradually work up to this dose. On alternate days you could put a small teaspoonful of Parrish's Chemical Food into every two tablespoonsful of drinking water—that is, plain water one day, medicine the next. As regards treatment for the fits, many fanciers have told me of their success when using bromide of potassium. If you immerse a bird's head in cold water for a moment, it usually suffices to end a fit at once. Also drop into the beak three or four spots (not more) of a ten-per-cent. solution of potassium bromide, which any chemist will prepare for you. Give two or three drops daily for a time, and at once on any sign of a fit. If you experience any difficulty in catching, etc., the bird to administer it direct into the beak, stir a small teaspoonful of the solution into two tablespoonsful of drinking water. Don't give the Chemical Food at the same time, however; also allow frequent intervals on plain water when giving the bromide of potassium.

Treatment, etc., of Crossbill.—Please tell me how to feed a Crossbill. Will it still retain after a house moult the red breast and head that it now has? Is it considered a rare bird? I never saw one before I had this. I find it likes mealworms.—WELSHMAN.

A Crossbill is not at all a rare bird; still, it is far from common. It is generally a winter visitor to the southern parts of Great Britain (though nests have been found there), frequenting the forests of Scotland in fair numbers. Many are seen from time to time on the show bench. Most are shown in their wild (i.e., red plumage). After a moult in captivity their colour changes to a yellowish green. I have heard of a case in which a moulted Crossbill retained some of the red shade in its plumage; but this was a noteworthy exception. The comparative amount and depth of the red colour is said to form a reliable index to this bird's age. The Crossbill is a Finch, remember. Your bird may be given for seed sunflower, hemp, and canary seed; and for animal food three or four mealworms daily, with any other insects you can get. A few berries (haw, privet, black, and so on), also the core and pips of apples, smashed walnuts, etc., and fruit are relished. Offer him any of the other seeds or seed mixtures in general use now and again; also small maize, dari, wheat, and the like. Sometimes he will eat a little, and variety is good. The Crossbill will find a great fund of amusement, and a supply of food also, in a few fir and pine cones, if you can get them with the seed in. He will also find you some employment in finding him with new perches, for he will use his spare moments in chewing these up. It is good for him, too, to have exercise for his curious and powerful mandibles. I found him an amusing and interesting bird when tame. Don't give the fir, etc., cones in a "green" state. Gather them ripe, when about to open; if necessary lay them in a warm place (such as a cool oven) until they open.

Feeding and Crossing a Chaffinch.—Please give me the correct treatment for a Chaffinch. Would a cross with a Canary be likely to make a singer?—NEW READER.

I seem to be very frequently telling readers how to feed Chaffinches. Pity you did not look up recent issues. I don't think you are at all likely to succeed in crossing a Chaffinch with a Canary. At the same time, it is a feat one or two fanciers claim to have accomplished, so you have some encouragement to try; if you get any young they will be valuable, and the males would almost certainly turn out good songsters. As a staple seed mixture give the following: Canary and teazle four parts, summer rape two parts, linseed one part, maw a quarter part. In addition, give a good feed of white sunflower seed daily. Smashed walnuts (and other nuts) are greatly relished also, and should be given occasionally in the light of a special treat. Keep the proportion of linseed down durnig the hot weather, but give it more freely during and towards the end of the moult. Give a mealworm or two every day or so, varying same with flies, smooth caterpillars, grubs, earwigs, spiders, aphides, gentles, wasp grubs, etc., as obtainable. These birds are not particularly keen on green food, but will nibble with appreciation a sprig of shepherd's purse, chickweed, groundsel, dandelion, etc.; radish, turnip, and summer rape seedlings are eagerly devoured, however, when just sprouting.

Treatment of Titmice.—(1) Am I doing right in feeding Blue Tits as per instructions for feeding Nightingales? (2) Would gentles do in place of mealworms?—TITMOUSE.

You certainly are feeding the Tits very well indeed if you are following the advice I gave a querist recently on the feeding of a Nightingale. Briefly, the species require some good insectivorous food daily, and a supply of canary, sunflower, hemp, and maw seed; also mealworms and other available insect life. They are fond of various table scraps—fat meat, suet, cheese, vegetables—but these things should not be overdone during the hot weather. Berries of many kinds are also relished. But Blue Tits are not so keen on seeds, etc., as some of the other members of the Tit family. They must have plenty of live food whenever it is obtainable, otherwise they are very liable to go "light," when there is nothing for it but to give them their liberty. (2) Gentles, and maggots generally, Tits are very fond of. I certainly, however, should not rely upon them altogether to replace mealworms, etc., if that is what you mean. Get them some ants' nests during the season by all means, as you are in a position to do so. There is nothing better for any insectivorous bird than live ants' eggs; and the ants themselves, too, if they will eat them, as almost all do. I will look up the matter you mention. I gave the method, but it was perhaps twelve months ago.

Bullfinch Bald (West Birmingham).—I answered an exactly similar query last week. Read reply to "H.W." and follow advice therein.

FOREIGN BIRDS.

Answered by WESLEY T. PAGE, F.Z.S., M.B.N.H.S.

Best Talker.—What is the best talking Grey? I have one, but it does not whistle or make any noise at all scarcely, and am told it is no good for learning to talk. How can I tell a young bird?—N. LATHAM.

The African Grey makes the best talker, and is an all grey bird with the exception of its crimson tail. The so-called Australian Grey Parrot is really the Rose-breasted Cockatoo, having grey upper parts, rose-coloured under parts, and power to erect the white feathers of the crown as a crest; this species has very little talking capacity, though one hears of talented specimens occasionally. You had better get an African Grey Parrot, though this will need care in acclimatising. Get a young one, and pick one that is alert and lively; pass those by having a sleepy, puffed-up appearance, and watch them a little before they are stirred up. A young bird has the iris of the eye silver grey, that of the adult being pale yellow. You will have to teach it to talk; there are two methods:—(1) Constant repetition of words and short sentences; (2) keeping it where it will hear plenty of conversation. You had better try both methods, and should ultimately develop a talented bird. A newly imported young Grey will need care at first. Keep it warm, and strictly out of draught. If quite a young bird it will need boiled maize at first (this only keeps fresh one day), but when you find it eating freely of the seed mixture, gradually wean it from the boiled maize. For seed mixture and other items of diet, see other replies in this and recent issues.

Loss of Budgerigar Cock (T.H.).—You must remove the odd hen, or she will upset the other pairs' nesting arrangements completely; that is the invariable rule. All the years I have kept these birds I have never known one male to look after two hens, and I don't think he will in your case. My Budgerigars have bred right through the year in my garden aviary, and there are young in the nest at the present time; however, this is unwise, only I could not avoid it. When you have them in cages it is best to let them have only three nests a year, and after that to separate the sexes if necessary, to prevent their nesting, as it ultimately leads to improperly fledged young, and the wearing out of stock birds.

Red-faced Lovebird.—My bird is frequently relaxed, and I think it arises from its drinking too much; otherwise it appears well. How often ought it to have water?—L.G.

Do not leave water in cage all day, but let it satisfy its thirst morning, noon, and evening. If the relaxation continues make its drinking water just saline with Epsom salts for one day only, and then leave things to take their course; but if you should notice any weakness, then for about a month just colour its drinking water daily with Parrish's chemical food. Keep a piece of cuttlefish hanging in the cage and a small piece lying on sand tray. Keep it in a fairly warm position out of reach of draught. Diet:—Canary, white and spray millet, with at this season a little ripe apple as green food. Keep sand tray covered with good bird grit, and while it is relaxed, clean same daily.

Building Outdoor Aviary.—I enclose rough plan of proposed aviary; it is to be 9 by 6 ft., with an extra length of 3ft. as shelter sheds. How many will it accommodate?—A. T. P.

I take it the two shelters shown in your plan are about 3ft. square each; they should not be smaller than this, and I should advise that the roofs be boarded and felted, and not glass as suggested. A moderate window in two sides of each shed would amply light them. The glass must be covered with wire netting on the inside. Your plan otherwise would answer well; so would your other structural plans and suggested materials. Use ½ in. mesh wire netting. It would hold 50 to 60 birds; but I should suggest 10 to 15 pairs to commence with—say, pairs each of Goldfinches, Bullfinches, Siskins, and brown Linnets, and Gouldian, Long-tailed Grass, Rufous-tailed Grass, Pectoral, Ribbon, Zebra, Ribbon, and Diamond Finches; Avadavats, Golden-breasted and Grey Waxbills, with a pair of Diamond Doves and some small species of foreign Quails for variety. See reply to "A. A." in this issue on same subject. Even greenfly taken from laburnum has been known to poison captive birds, so I should certainly advise you to grub out the stump of same before putting up your aviary. If you want further help as you proceed, ask for same.

Sketch of Outdoor Aviary (A. A.).—Your suggested aviary should be a success, but I advise you to have the shed and covered part of flight boarded and felted, reserving the glass for front and ends only; the seed glass should be covered with wire netting on the inside. For the framework 2in. square quartering should be sufficient, and the flight should be covered with ½ in. mesh wire netting; ½ in. wire netting should also be carried from skirting board, 18 in. below ground level, and then turned outward for 9 to 12 in., so as to exclude vermin. I should advise you to keep your shed as one flight only, wiring off sufficient space just inside the door to view the birds and give room for a few shelves for storage of food and utensils. For Greenfinches, etc., no artificial heat will be required, though a service of pipes to warm their night shelter in extreme weather is no disadvantage. I should advise the shed to be 8ft. long; this will leave the flight 12½ft. Of this I should roof in 2½ft., and also run a 12in. board the whole length of flight against the wall. This will give you good shelter for nesting receptacles. You cannot make your flight too wild; take a bit of common land as your example.

What Parrot?—Can you name my bird for me? General colour, green; wings darker; blood-red shoulder patch, black and red round neck, and red beak. Will it talk, and what is its treatment?—"HILBERT."

Your bird is the Indian ring-necked Parrakeet (*Palæornis torquata*). Most individuals of this species learn to articulate many words very clearly, and are also good mimics. The temperature of any ordinary living-room will be ample, but this, and all birds, must be protected from draughts. Diet: Canary, oats, hemp, dari, wheat and sunflower seed; grit, cuttlefish, green food, nuts, ripe fruit, plain biscuit, and a little boiled potato (dry), and water ad lib. Do not give table scraps, or any kind of slops.

Catching Birds in Aviary (W.H.P.).—Make a fair-sized all-wire cage, with a large flap door which can be worked by a string from the outside; put your food vessels in the cage, prop up the door, and simply release it by means of the string when the birds you wish to capture are feeding. There is but little difficulty in catching birds so, even in the largest enclosures. One pair would ultimately breed in your cage, but not with the same freedom as in the aviary. I fear you can do nothing with birds that throw out their young, that is, if you have hung up a sufficient number of husks. There should be at least double the number of husks about that there are pairs of birds; even a larger proportion would be better where you have the space. If you have only one husk up for each pair, by increasing the number you may get over the difficulty; but if they persistently continue to throw out their young simply get rid of such unnatural parents. Diet: Canary white and spray millet, with oats (white), regularly when they are feeding young; green food, grit, cuttlefish, plain biscuit or dry crust of household bread. I cannot recommend you to put either British or Foreign Finches with Budgerigars; for a time all goes well, then you begin to pick up mutilated bodies or maimed birds, and the mischievous Budgerigar is the culprit.

Parrot Queries (Perplexed).—(1) Fill its seed hopper up each morning, and so long as there is any seed left do not replenish it till the next day. But it will not matter if you confine the mixture to the three seeds named, so that you mix them as follows: 1 pint canary and ½ pint each hemp and white sunflower seeds. It is always safest to call in a vet. at once for swellings or tumours, but, if you do not care to do that, try touching same with a spot of tincture of iodine from the point of a fine camel hair brush; but it must only be a touch, and see that it does not reach the bird's eye. (2) Half fill the seed hopper with dry mixture, and then fill up with the boiled maize (this last only keeps fresh one day), and I think you will soon find the bird taking the dry mixture. When this occurs gradually wean it from the boiled maize. Keep its bowels freely moving (not loose) with Diniford's Magnesia (for directions see other replies). Continue the ipecacuanha mixture daily for a week or ten days. Put 12 drops of Parrish's Chemical Food over its boiled maize for the next month. Fasten some fine wire netting under cage grating so that bird cannot reach its excreta. Supply grit in a tin, and keep up a regular supply of cuttlefish for both birds.

Treating Young Grey Parrots ("Jerome").—Your two birds were evidently contaminated with that scourge of Grey Parrots septicæmia, which often does not develop for 4, 5, 6 to 8 weeks; it is caused by the insanitary conditions under which they are brought down to the coast and imported to this country. The only remedy is to give a mild aperient and keep very warm and free from draught, but in more than nine cases out of 10 it is fatal. Never use a cage for another bird in which a bird has died till it has been well sterilised. For directions as to this see replies in our last issue. A young Grey should be kept warm and quiet, and fed on the dry seed mixture (see other replies), and a little boiled maize. When it is freely eating the dry mixture gradually wean it from the maize; give grit only sparingly at first, also give in small quantities ripe fruit, nuts, and plain biscuit, and let it satisfy its thirst three times a day. Keep a piece of cuttlefish in the cage for it to chew. A newly-imported Grey is always a more or less risky purchase for reasons stated above; it is mostly cheaper to give a higher figure for a bird that has been 12 months in this country, but see that you get such.

Blue-winged Lovebird.—Hen is in very poor feather; some of her feathers have been pulled out by the cock; she is now caged up separately. How shall I treat?—M.A.M.

Diet: Canary and white millet, green food, a little ripe fruit if they will eat it; grit, cuttlefish, and a continuous supply of water. Keep it warm, out of draught, and caged separately till its plumage is in condition again. For the next month just colour its drinking water with Parrish's Chemical Food. At the same time keep a watch upon it, and if its bowels are not moving freely, for one day, instead of Chemical Food, make its drinking water just saline with Epsom salts. To prevent the skin of head hardening rub in a little clean vaseline, but not sufficient to grease its plumage. If the head has been very closely picked, and for any length of time, it is probable it will recover its plumage, but slowly.

Outdoor Aviary (A.A.).—(1) Use the division as you suggest, but not as a permanency. (2) If you carry netting into the ground, around the aviary to a depth of 18 in., concrete should not be necessary. (3) A light is an advantage under special conditions; it would be as well to have it for such, but it is not really essential. (4) The wire must be inside the glass. (5) Either; but a running door would be preferable. (6) Do not have tubs, let the shrubs be planted in the soil. (7) An outside provision for dry sand, food hoppers, and extra shelter for nesting receptacles. (8) You need not fear the thorns. (9) Give the wire netting a coat of Brunswick black; this enables you to see the birds better, as well as being a preservative. (10) Much the same as in a greenhouse, say, in a height of 7 ft., 3 ft. matchboarding, and the remainder glass. (11) I should not plant the holly hedge; have a double course of wire netting, this will be more effective and not hinder your vision of the birds. Re Britishers: For these, simply enclose a piece of your garden by putting up light standards and bearers, and stretching wire netting over same, erecting an open-fronted shed at one end, the front of which should be as near south as you can arrange.

Cages, etc., for Foreign Birds.—(1) Can Java Sparrows, Avadavats, etc., be kept in cage in a dwelling house? (2) What is the smallest cage that should be used? (3) Should the birds be kept in pairs, and would any breed in cage? (4) What is their food and treatment?—BOSCOE.

(1) A Crystal Palace type cage, 2 ft. x 2 ft. x 16 in., would accommodate about a dozen, but the cage must not be stood where the wind can blow through it. They should do well in any living room, provided they are protected against draught when room is being cleaned or aired. (2) An ordinary single breeding cage must be the minimum; the double type would be better. (3) If you desire to have any chance of breeding, only one pair must be kept in each cage. (4) Keep a liberal supply of bird grit and crushed egg shells on your sand tray, give a daily bath; but have a bath to hang over cage door, outside the cage. Canary, white and spray millet, green food, a few ants' eggs, cuttlefish, and a regular supply of clean water for drinking. When they have young to feed supply a little of some good soft food mixture.

Breeding Foreign Finches.—I have pair of Bengalee, Java Sparrows, Cutthroats, and Zebra Finches, all in finest condition. Must they be put up in separate pairs, what nests, and what special treatment?—H.E.C.

Leave the Avadavats in the aviary, as it is very seldom even in large aviaries that these birds attempt to breed. Cage the other four pairs up separately, using nothing smaller than a single breeding (ordinary type) cage, but a double one would be better; leave the ordinary nest box in, and put a Hartz travelling cage at the other end; of course, you must take out the fittings and cut out a couple of the bars to make an entrance. All of them are probable breeders. Supply long grass, hay, and a canary nest bag for nesting material. When they have young to feed supply a little of some good soft food mixture, fresh green food twice daily, and scatter a few ants' eggs over sand tray. When they show signs of nesting, crush some egg shells, and mingle these with their grit.

What Companions for Budgerigars? (Pro Bono Publico).—It is very difficult to answer without having the dimensions of your aviary. If it is an ordinary Crystal Palace aviary (cage), 2½ x 2½ x about 18 in., I should advise either of the following alternatives:—(1) Another pair of yellow Budgerigars for contrast; hang up four husks and leave the two pairs to breed; it would be interesting, and the two varieties disporting themselves together make a really fine display. (2) Put in pairs of Passerine Parrakeets and Greyheaded Lovebirds, the predominating colours of all being green. (3) Red-crested Cardinals (pair) and Grenadier Weaver (cock only), all active birds, showy and brilliant. (4) You might try a pair of White-eared Conures. I do not think they would touch the Budgerigars; in an aviary with space they certainly do not, but as to their behaviour in an aviary-cage I am somewhat in doubt. Budgerigars are notably treacherous to Finches, etc., in either cage or aviary. Of course, if you banished the Budgerigars, a dozen Waxbills in variety would make a handsome show, as would also a dozen Finches. If you will repeat query, quoting size of aviary, and stating whether it is your intention to retain Budgerigars, I will try and give more definite help.

Building Outdoor Aviary (Angus).—Your suggested plans would answer well, but the front I should advise you to have 12 in. of boarding at top and bottom, and the space between open wirework. You would want a square of glass in end of shed or door to light up same; it must be protected by wire netting. You will not need the wooden shutters; the combined wood and glass ones will fully answer for all occasions. For such birds as Budgerigars they will not be needed except in very extreme weather, even in your Northern locality. You will have space for thirty birds, but I should not advise you to put in more than three or four pair at first, as they will soon increase, and if you get each pair from a different source, the young can be permitted to interbreed, without fear of deterioration. Use Brunswick black for painting the wire netting, and Hall's washable distemper for the interior, and good oil paint for the outside woodwork. You could keep about 40 small Finches and Waxbills in a similar house, but only half that number for breeding purposes. I do not think you will be bothered by cats; if you fear them at nights close your shutters, but you must make provision for ventilation in warm weather. Re consumption of seed, I have never tested this myself. I should suggest getting a peck each (not cheap stuff), canary and white millet, from some reliable dealer (see advt. columns), and you can soon settle the point for yourself.

Grey Parrot—What Diet, etc. (Bird Lover).—(1) A staple mixture consisting of: 2 parts each canary and oats, and one part each wheat, dari, hemp and sunflower seeds; grit and cuttlefish. Give in addition, green food (cleau and fresh lettuce), plain biscuit, ripe fruit, nuts, boiled potato (dry), and raw carrot. At first let it satisfy its thirst three times a day; ultimately the water can be left in cage continuously. (2) Yes, but some Parrots will not bathe; in such case they must be lightly sprayed, care being taken to keep them out of draught till dry. (3) Most probably it will learn new phrases if you persevere with it: keep it where it will hear plenty of conversation, and also frequently repeat to it such words, etc., as you wish it to learn. Note: Refer back to other replies on the Grey Parrot in recent issues, and you will get many hints. Guard against draughts, and do not give slops, buttered foods, or any kind of animal food.

Amazon with Cold and Diarrhœa (Enfield).—The bird must be kept warm, out of draught, and quiet; for one day only make its drinking water quite saline with Epsom salts, and repeat this in a week's time. Let it have as much cuttlefish as it will eat, and put on a piece of biscuit, or any absorbent food it readily eats, 10 to 12 drops daily of Parrish's Chemical Food. You can still give the cold remedy in the drinking water, if it is needed, on such days as you are not giving the salts. Keep its cage strictly clean; it would be better to remove its voidings at once. It would have been better if you had written sooner, but unless there is some trouble, which your letter does not indicate, it should soon improve under above treatment; if it does not do so, it will certainly die, as it appears to be in a very bad way. Should have sent a postcard, but your query bore no address.

Birds for Cages (Constant Reader).—(1) Yes, Cutthroats would breed in a dome cage, 2 ft. x 2 ft. x 16 in., but it would be better to screen the corner in which you put nest box by a piece of canvas outside the wires, and by heather sprays within; if they are not disturbed by having the nest box examined they should breed, but they must have the whole cage to themselves. (2) You could keep the Cutthroats and Avadavats together, but a better selection would be, pairs each of Common Avadavats, Green Avadavats, Zebra Waxbills, Orange Cheek, St. Helena, and Grey Waxbills. These are all beautiful and merry little birds, easy to keep and cheap (3/6 to 4/6 a pair). Occasionally there are losses among new purchases, but once acclimatised they are hardy and long-lived. If you hang up longitudinally half-a-dozen cocoa-nut shells (the ends of which you have sawn off so as to leave, say, a 2 in. hole), and supply them with a little moss, you will find your pets not merely beautiful but very interesting also. There should be several food hoppers about the cage.

Corrections.—Under GALAH PARROT, for Rose-crested read Rose-breasted. Under WHAT PARRAKEET? for *falœornis*, read *Palœornis*.

PARK & LAKE AVICULTURE.

Answered by FRANK FINN, B.A., F.Z.S., M.B.O.U., etc.

Keeping Pheasants.—(1) Can I keep a cock and two hens in a Bantam house, and about 10 yards flight? (2) How should I feed? (3) Are gold or silver the best to keep?—M. BAKER.

(1) Yes, you could keep a trio of pheasants with the accommodation you name—that is, if the flight is at least a yard wide. Very open netting will not do; use inch mesh. Board over two yards of the flight, and lay down the rest with grass and shrubs. (2) Feed as you would fowls, with a variety of corn, and plenty of green food; don't give much maize or soft food, however, but give dried flies and some cooked crissel two or three times a week, or some chopped cooked meat or hard-boiled egg. (3) Golds are the best to keep in a small space; they are smaller than Silvers and more showy; moreover, they are in greater demand, and so their eggs or young are more saleable. They are not quite so easy to rear as Silvers, however, nor are they so long-lived; but they cannot be called delicate.

POST MORTEMS.

Mr. J. North, 435, Oxford Road, Reading, will examine cage birds for a fee of 1s. 6d. each bird; for a report direct 2s. 6d.; analysis, 21s. Subjects for post-mortem examination must be sent packed in a box direct to J. North, with fee. Any sent to the office of this paper will be thrown away, and if a fee is enclosed the loss will be the sender's.

Tovi Parrakeet (M. R. R.).—Inflammation of the lungs, consequent on feverishness, brought about by chronic softening of the liver, caused the death of this bird.

GENERAL.

Answered by the EDITOR.

Suggestion (H. T. Jones).—We thank you for your suggestion, which shall receive our best consideration.

Interesting Snapshots (J. Craig).—We are indebted to you for a very interesting article, which we shall hope to publish in due course.

Distributing Specimen Copies (A. Chadwick).—Many thanks for your kindness in offering to distribute specimen copies, which have been duly forwarded on to you.

BEGINNERS: READ THE ANNUAL.

CLUB NOTICES.

No charge is made for notices of forthcoming meetings, but they can only be inserted once. Should secretaries desire to secure immediate insertion of their announcements **exactly as written** they can do so by prepayment at the rate of three words a penny.

Altrincham C.B.S.—March 26th, at White Star Restaurant, 8 o'clock. Lecture by Mr. A. Royle, "Double Buffing and Double Yellowing."—Tom Harrison, sec.

Barrow and Dis. C.B.A.—March 27th, at St. George's Hall, 7.30. Annual meeting; important business.—E. E. Miller, sec.

Blackburn Linnet F.A.—March 30th, at Headquarters, Old Red Lion, Snig Brook, 1 o'clock. Singing Contest.—R. Hayhurst, sec.

Blackburn Skylark S.A.—March 30th, at the Good Samaritan, Grimshaw Park, 2 p.m. Singing Contest.—J. Sheffield, sec.

Bradford (West) C.B.A.—March 23rd, at the Red Lion Hotel, Girlington, 7.30 p.m. Mr. H. W. Battye will open discussion on "Pairing and Breeding"; all fanciers welcome.—T. Clegg, sec.

City and Suburban A.C.B.—March 25th, at the Church Institute, 60, Paddington-st., W., 8.15 p.m. Lecture by Mr. J. Robson, "Canaries that are popular, and why"; visitors welcomed.—Victor Wynn, sec.

City of Birmingham C.B.S.—April 3rd, at Crown Hotel, Station Street, 8 p.m. Lecture by Mr. A. Paddock on the Yorkshire Canary; fanciers and friends invited.—H .C. Wilkins, sec.

City of Bradford.—March 30th, at Travellers' Rest, 8 p.m. Member Competition arrangements for 1907.—P. Stansfield, sec.

Crewe O.S.—March 26th, at Nag's Head Inn, 7.30. Suggestions from the Potteries and Dis. C.B.A.; all requested to attend.—A. Wilkinson, sec.

East Bowling and Dis. B.F.A.—March 23rd, at Barley Mow Hotel, 7.30. To arrange annual trip.—T. E. Higgins, sec.

Gt. Harwood and Dis. C.B.S.—March 25th, at Headquarters, late Queen's Hotel, 7.30. Important; all members attend.—F. Sharples, sec.

Glasgow and Western Counties N.C.M.B.F.B.C.—March 30th, at 122, Ingram Street, Glasgow, 7 p.m. Monthly Show; classes: British Goldfinch, Linnet, Siskin, Redpoll or Twite, Foreign Goldfinch; also novice judging competition.—J. H. Adam, sec.

Glasgow and West of Scotland B.C.—March 26th, 8 p.m. Show of British birds (three classes); judges, Messrs. T. Erskine, R. Watson, and George Henderson.—R. A. Brown, hon. sec.

Green Canary Assoc.—March 28th, at the Oldham Hall, Renshaw-st., Liverpool. Annual meeting; members please attend early as there is a large amount of business to be gone through.—S. Hadwin, sec.

Halifax O.S.—March 23rd, at Griffin Hotel, 8 o'clock. Special meeting; very important business; all members attend.—J. F. Thackray, sec.

Hyde and Dis. C.B.S.—March 25th, at St. George's School, 8 p.m. Lecture on Norwich Plainhead, by Mr. F. Barraclough; all fanciers invited.—T. Allsop, sec.

Laisterdyke B.F.A.—March 28th, at Royal Oak Hotel, 7. Tea and concert for members and friends; tickets, 1s. 3d. each.—J. Pownall, sec.

Lancaster and Dis. C.B.S.—April 6th, at Market Hall Coffee Rooms, 7.30 p.m. Election of judge; schedule, and other important business.—H. J. Brown, sec.

Larkhall C.B.C.—March 30th, at Miners' Hall, 6 p.m. At 7 p.m., lecture; all invited.—Geo. Kirk, sec

Leicester C.B.S.—March 27th, at Headquarters, 8 p.m. Table Show of pairs for breeding; judge, Mr G. Lander.—J. Heighton, sec.

London and Counties A.C.B.—March 28th, at The Bay Malton, Gt. Portland Street, W., 8.30 p.m. Lecture by Mr. G. Gardner, "The Norwich Plainhead and its Critics."—R. J. Pretty, sec.

Morpeth and Dis. O.S.—March 23rd, at King's Head Inn, 7 p.m. Selection of judges; classification, etc.; all members, also intending members, attend.—A. Dippe, sec.

Morriston C.B.S.—March 30th, at the Woodfield Coffee Tavern, Morriston, 7 p.m. General meeting; hope to see good muster of new members. At meeting held on the 16th inst. it was decided to join the C.B.U.—D. Jeremy, hon. sec.

N.B.B. and M.C.—March 28th, at 25, High Holborn, 8 o'clock. Amendment of rule 14 and classification of Crossbill and Snow Bunting.—Plumbridge and Carr, secs.

North Manchester C.B.S.—March 26th, at Christ Church Schools, Harpurhey, 8 o'clock. Lecture on Norwich Canary by Mr. Jas. Coulson; all fanciers invited.—John Davey, sec.

Oldham and Dis. C.B.S.—March 26th, at Textile Dining Rooms, Shaw-rd., 8 p.m. Discussion on the Norwich Canary; all interested invited.—A. Ackroyd, sec.

Potteries and Dis. C.B.A.—March 29th, at Red Lion Hotel, Stoke, 8 p.m. To select judge for Open Show; final arrangements for annual dinner.—J. Simcock, sec.

Rochdale O.C.—March 25th, at Club Rooms, 8 p.m. —J Butterworth, sec.

St. Helens F. and F.A.—March 3rd. Address by Mr Chas. Houlton.—J. Shufflebotham, hon. sec. (Place and time of meeting not specified.—Ed.)

Sale Open O.S.—March 25th, at Sale Hotel, Marsland Road, 8 p.m. Report on rules; Mr. T. Harrison (Altrincham) on "Seeds and Other Foods."—G. F. Hardcastle, sec.

Scottish Metropolitan O.S.—March 30th, at Buchanan's Hotel, 7.30 p.m. Important; large attendance requested.—Wm. McDonald, sec.

Seaham Harbour and Dis. C.B.B.A.—March 23rd, at Station Hotel, 7. Important business.—J. M. Nicholson, sec.

Swansea and Dis. C.B.A.—March 28th, at Oxford Coffee Tavern, 7.30. Table Show; Goldfinches and Bullfinches (four classes), house moulted and fresh caught; judge, Mr. Trevor Gamage.—Alf. Hitchings, sec.

Tamworth and Dis. C.B.S.—March 30th, at College Lane Schools, 7.45 p.m.—J. E. Brown, hon. sec.

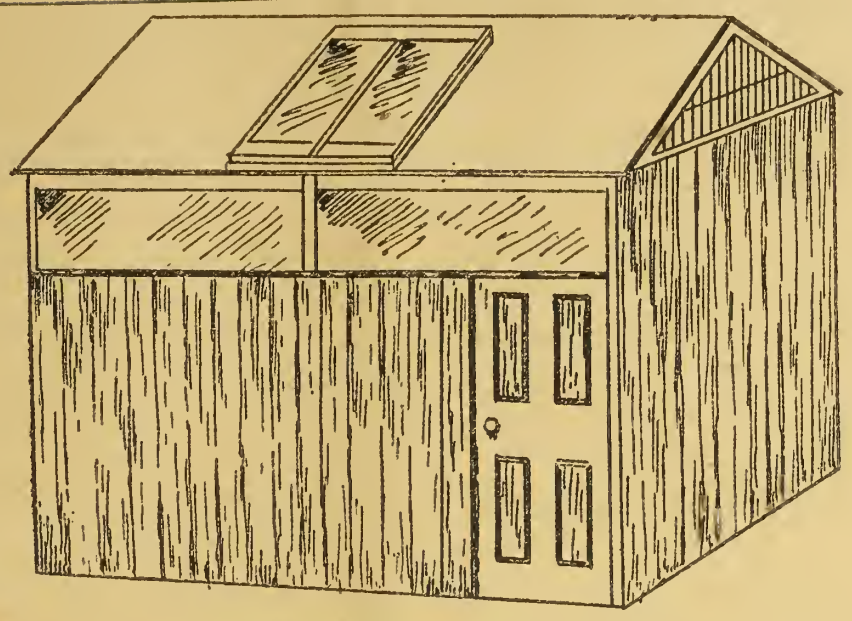
Wallsend and Mid-Tyne C.B.S.—March 28th, at Station Hotel, Wallsend, 7.30 p.m. Mr. Welch (Hexham) will lecture on British Softbills.—John R. Evans, sec.

Warrington and Dis. C.B.S.—March 28th, 7.45. Alteration in novice rules; novices please note.—Jas. Emmett, sec.

Wombwell and Dis. C.B.A.—March 23rd, at Alma Inn, Alma Street, 7 o'clock. Lecture on breeding by G. Browning, of Rotherham; balance-sheet; all invited.—C. Gleadhall, sec.

HOW TO MAKE LIGHT BUNS.

By using Eiffel Tower Bun Flour the most inexperienced person can make *light* Buns and Cakes with certain success. Try a 1d. packet. Save Eiffel Tower Labels for 10/6 picture free.



"South London's" Garden Aviary.

A SMALL GARDEN AVIARY.

In reply to Mr. J. H. Barrett's enquiry in a recent issue, in an aviary, 6 ft. by 3 ft. by 2 ft., one could scarcely get comfortably into same to attend to birds. I have erected a wooden bird house, which suits me well; it is 6 ft. 4 in. by 4 ft. 4 in., 6 ft. high to eaves, and 7 ft. 6 in. to ridge, two windows in front, one skylight on hinges. I have a bench 14 in. wide along front (whole length, and shelves beneath. On the back of house, I hang my twelve cages in three tiers, so get a good view of birds, and it is very easily attended to. The bench is useful to work on. At each end of the triangle part at roof I have inserted wire for ventilation in summer; in winter I pack the wire ends up, also nail a board on skylight. On extra cold nights I place a two-gallon tin bottle of hot water in the aviary. I am within half a mile of the River Thames, so bought old boat timbers from brokers, i.e., 1¼ in. rough boards, which I cleaned and smoothed over with plane. I got all my boards cut to right lengths—6 ft. long for all round, and 2 ft. 6in. for roof—with three rows of cross bars all round. These I had two inches wide, six for ends, and six for sides, four for roof, and six for the triangle ends, eave to ridge. I made each side, ends, gable and roof separately, and then fastened all together with screws and angle irons, made from hoop iron. I have given two coats of paint, and it now requires another. The house is in sections, and easy to remove. If a wood floor was put in that would be extra, though better. Cost as under, doing all labour and most of the carriage myself:—

	s.	d.
Timber	12	3
Part carriage as paid	0	6
Two second-hand windows	2	0
One new window for roof	2	6
One pair hinges, clasps and lock	1	7
Roofing felt	1	8
Nails	0	9
Paint	3	2
	£1	4 5

—South London.

A Novice's Experiences with Yorkshire Canaries.

A Paper read by Mr. J. Lees before the Rochdale Good Intent C.B.S., March 6th.

Mr. Chairman and Fellow Fanciers,—In coming before you this evening to start our essay or improvement class, I do not wish to pose as an authority on the subject decided on—namely, "Yorkshires and their General Management"; but I have, I think, chosen a subject that should draw a lot of different ideas from members present.

The Yorkshire is a bird that has become very popular, not only with our own society, but all over the world, in our own case rising from classes of three and four to 11 and 12, besides open classes, which I consider very satisfactory. In speaking about quality I need say very little, as some have won in open competition. I shall be pleased if this paper, though only from the pen of a novice, proves in any way of benefit to those present this evening.

In commencing to breed this variety it is not necessary, in my opinion, to purchase show specimens, as like does not always produce like, a good bird being often bred from inferior parents; but at the same time I strongly believe in pedigree breeding, and in no variety is it more necessary than in the Yorkshire, as you may very easily be deceived by a good looking bird if you do not know the pedigree. The kind of birds I fancy for breeding are those with a nice round narrow head, a well-rounded back running straight from the back of the head to the tip of the tail, good long and evenly-carried wings, a breast nicely rounded and smooth, cutting away neatly to the tail, which should be long and completely folded, and long legs, showing the thighs nicely. As for size, there is a great difference of opinion, but for my own part I prefer it on the cock's side, without using the Lancashire, as is done in many a case, wth only size as a recommendation. I am sure that you can get big Yorkshires, brimful of quality, that will do more good, and then there will be no time wasted in breeding out any faults that may come by the use of the Lancashire, because you get type, quality and position at the beginning.

Double buffing and double yellowing I do not believe in, unless in the case of fanciers with a large stock; they can afford to experiment in this way; but for anyone with six or seven pairs, I say get what you want at the first, and try for the ideal right away. In-breeding I have never practised, but I think that cousins are plenty near enough for mating.

A FEW FAULTS.

The faults I least like to see are broad heads and browed, hollow neck, gutter backs, crossed wings, hinged tail, and too much chest. As for frill, I think there are very few bred without. If we can breed birds without these faults we may consider ourselves very lucky fanciers.

Having decided how you intend pairing (I might here say, never pair two birds with the same fault), we must now begin to think of getting our birds into breeding condition. Do not do this all at once, but gradually. I do not believe in starting to feed about a fortnight before pairing. My diet is good sound canary seed as their staple food, egg food once a week from Christmas, and a little mixed seed occasionally, also a little sweet apple. To the hens I give a pinch of inga seed twice a week, which is a grand preventative against egg binding, and I find that my birds are in grand condition by the last week in March or first week in April. Do not pair up unless in tip-top condition.

After pairing up, the next thing we look for are eggs, and then young. I myself have been troubled very little with bad sitters and feeders in this variety, and I think you may safely trust your best eggs without any fear of anything going wrong, as Yorkshires make the best of parents. Of course there are exceptional cases; if anyone present has been troubled with such, I hope they will speak out.

FEEDING THE YOUNG BIRDS.

For the first three days I give the young birds egg food, and as much bruised hemp as the hen will eat; then I give green food—lettuce or dandelion, the latter preferred; also a little soaked rape, which is a splendid thing for bad feeders. When the young ones are about three weeks old a sharp look out must be kept on the hens, as they sometimes want to go to nest before the young ones can do for themselves. In this case the nursery cage comes in very useful. I again introduce the cock, and they finish feeding through the wires. When I see them doing for themselves I remove them to the flight, and if they are wanted for first feather show, hang on the bath and show cage daily, and handle them as much as possible, so that they will face the judge when the show comes round.

Next comes moulting time, the most trying time in a bird's life, and if you wish to be successful you must now colour feed. Some have one way and some another. Last year I had very good results from mixing the food with a cake the recipe for which I got out of Cage Birds. It will keep any length of time, and save a lot of trouble. It is used by some of the most successful exhibitors of the present time, and if any one present would care for a copy I shall be pleased to give them one at any time. And now, gentlemen, having treated the subject to the best of my ability, I thank you one and all for your attention.

A REVIEW OF "CAGE BIRDS ANNUAL."

Cage Birds Annual for 1907 makes its appearance this year in a new form, one which, it is hoped, will render it even more acceptable to keepers of cage birds than heretofore. The present shape makes the Annual more of a note-book, and improves the practical value of the Breeding Room Registers, Show Records and Cash Accounts. The contents have undergone thorough revision, and been brought up-to-date in every respect. The list of cage bird societies is now a remarkable one, and the Secretary's name and address being given (with other officials, in the majority of cases), this feature is of particular value to fanciers desirous of knowing the societies devoted to the hobby in their locality. To secretaries and other society officials this feature will be of great service, as also will the revised list of recognised judges, with their addresses. Beginners in the show side of the hobby will find the "Standards and Scales of Exhibition Points" (embracing some thirty kinds of birds) of very considerable assistance to them. That old and popular feature, the "Glossary of Fanciers' Terms," has been brought up with the times, and when the uninitiated hears such expressions as "bald-faced," "long in the barrel," and the like, he has only to turn to it to find a full explanation. The diseases of cage birds are also very fully dealt with, and all the best-known and most reliable methods of treatment are set forth, and this feature alone makes the Annual "worth its weight in gold," as a work of reference. The past show season is very interestingly reviewed by experts, all varieties—Norwich, Yorks, Scotch, British, etc.—receiving attention. Last, but not least, we must mention the articles, which as in the past, have been selected from the point of view of practical utility. All are full of invaluable "tips" and suggestions. Mr. S. Drake relates his very successful method of feeding young Canaries from the nest—a method which should be known to every breeder. Mr. C. A. House contributes some "Thoughts on the Matching of Canaries." Mr. J. Nicholson, one of our recognised experts, has an article on "Mule and Hybrid Breeding." Mr. J. McNaught explains the call-notes and song of some of our commoner British birds. Mr. Simpson writes on "The Pet Bird, and how to treat it." Mr. W. T. Page describes and tells how to tend some pleasing and beautiful Foreign birds. Mr. H. Norman reviews the year amongst our wild birds. For interest and value no previous Annual has approached this list of contents. The illustrations of "Birds of the Year," are on the same lavish lines as in previous years, the coloured frontispiece being an admirable portrait by Mr. Norman, of Mr. C. T. Maxwell's noted house-moulted Gold-crested Wren, which lately met so sad a death.

The most serviceable, striking, yet tasteful and economical

LIVE BIRD LABELS

are those obtainable from "Cage Birds."

For the convenience of readers we have had printed a quantity of address labels suitable for use when despatching live birds on journeys by rail, etc. These are printed in red ink, on paper gummed at back, and

LIVE BIRDS
THIS SIDE UP.

BORDERS VERSUS COLOUR.

SIR,—I certainly do not agree with the suggestion of colour-feeding these birds. Surely the colour foodites will let us have one variety in a natural way. It is only those interested in the so-called "food" who gain by colour feeding, for I am sure it does the birds no good. A. MORRISON.

HOW TO MAKE CAGE FRONTS.

SIR,—Would any of your readers assist me in the following matter? I purchased some punched bars thinking they were wood, but they sent metal ones. As I make my own cages, I don't know how to fix them, especially the middle bars; and how to fix the top one I cannot make out. Perhaps your readers would assist me. I always make cages of wood, box fashion.—MULES.

PROPOSED NEW SOCIETIES.

Southend-on-Sea.

SIR,—A meeting is to be held in the Alexandra Hotel, Southend-on-Sea, on March 27th, to consider the advisability of forming a cage bird society, which is to embrace all sections of the Fancy. The chair will be taken at 8 p.m. sharp. It is to be hoped that there will be a good muster of the local fanciers, in whose interest the meeting is being called.—J. DOBSON and W. D. FRANKS.

Bedlington Station.

SIR,—A meeting was held at Bedlington Station on March 16th, at the Railway Inn, to form a new society for cage birds. About 30 members joined. After much discussion, the officers elected were: Mr. G. L. Craigs, President; Mr. R. Rowell and Mr. T. Dixon, Vice-Presidents; Mr. J. Jobling, Sec.; Mr. J. Beveridge, Treasurer; Mr. J. Smith, Assist. Sec.; and Mr. R. Charlton, Chairman. The society will take members up to April by applying to the Sec.—J. JOBLING, West Sleekburn, Morpeth.

BIRDS SEEN AND HEARD IN WANSTEAD PARK.

SIR,—Whilst walking with my wife on Sunday last my attention was drawn to a very fine Cock Robin, who sat on a bough singing as if it was the height of summer, in spite of the boisterous March winds which swayed the bough to and fro; a little further on we saw a lovely little pair of gold-crested Wrens flitting from bough to bough. It was really wonderful how these little bunches of feathers maintained their footing on the boughs as they swayed to and fro. Crossing the park in another direction, we came across a pair of Jenny Wrens, also a fine cock Missle Thrush. A little further on a Song Thrush was stoutly singing; we also saw and heard a Blackbird, with its flute-like notes. There are dozens of Starlings to be seen whichever way you turn, also Rooks and Sparrows, which sit in the trees by the score. As we were crossing the road coming from the park, to my surprise, there came flying across the road a handsome cock Winchat. Is this not a very rare occurrence for this part? I should not have noticed it only that my attention was drawn to its familiar call note, "Chat, chat, chat!"—W. C. H. WYTHE.

A TALE OF TWO CHOUGHS.

SIR,—I enclose you a cutting which I found very interesting, and which may prove the same to other readers of your valuable paper:—A correspondent writes to the "Daily Telegraph": "For three years or thereby I have had in my aviary at Clapham, hard by the Common, a Chough, a red-legged and big, red-beaked member of the Crow family. The bird came from Las Palmas, and is of a species now exceedingly rare in this country, only a few survivors being found in remote parts of Devonshire and Cornwall. My lady bird has all the curiosity of the Choughs, and she is, moreover, sociable, talkative in English, and familiar, but not with strangers. She roams about the garden with the freedom of a dog, and occasionally, with the skittishness of a cat, wanders upon the tiles. A morning or two ago we heard a familiar cry from the roof, and reprimanded the 'girl' for letting 'Chuffy' roam at large. But 'Urbani' said, 'Oh, no; Chuffy is in the aviary, and it must be another bird on the roof.' Sure enough such was the case. My wife had seen what she thought was a Hawk circling overhead, possibly attracted by the shrill, whistling cry of our 'Chuffy.' Trusting to feminine wiles, I told the maid to leave the aviary door open. Within two minutes a big male bird—a bold, wild fellow—flew down from the roof and entered the cage. We shut the door on him and her, and both are quite happy, and I verily believe the big, savage newcomer is getting quite tame. Yesterday he was wandering about the garden wing-by-wing with 'Chuffy,' gallant and attentive. But will any of your numerous scientific readers please tell me how so wonderful an event came about? The newcomer is most unmistakeably a wild bird—not a cage-escaped vagrant, but a stranger to the metropolis. Where has he journeyed from, and how came it about he was passing over London and in that singularly select district known as Clapham?"—T. H. VALLANCE.

CREST AND NORWICH PLAINHEAD C.C. OF IRELAND.

SIR,—The committee have drawn up a code of rules for the governing of the club, which will be sent out this week, with a circular inviting all fanciers of the two varieties in Ireland to become members. The next meeting will be held in the Avenue Hall, Garfield Street, Belfast, on Tuesday, 26th inst., at 8 p.m., for the purpose of enrolling members and receiving subscriptions.—JAS. STEWART, Hon. Sec., 359, Donegal Road, Belfast.

INHUMAN BIRD CATCHING IN CORNWALL.

SIR,—There is no cruelty in catching birds from August 1st to March 1st. Where the cruelty comes in is with amateur bird-catchers, who do not know how to brace a bird or lay a pair of nets. It is not only catching the birds, it is the art of taking them out of the nets when you catch them, as the nets sometimes have 18 in. of lent in them, and sometimes the birds get tangled up in the lent. When tho amateur takes the bird out he often picks it alive or breaks its legs. An amateur bird-catcher should go out with an experienced hand until he thoroughly understands how to catch birds. As for stopping Starling shooting matches, that is just tho thing they ought to think more of.—T. TOMPKINS.

THE EARLY BIRDS.

A Curious Nesting Place.

SIR,—I send you a sketch of a Robin's nest which I found on a common at Northwood, Feb. 25th, in an old kettle. I stood and watched two old birds come backwards and forwards with leaves and moss in their beaks, and continue building; I left them very busy. I also found several Thrushes busy nesting. I think

Robin's Nest in a Kettle.

this rather early in the year. I paid another visit to the spot on March 4th, and, to my surprise, found the nest contained three eggs. I stood for a while, and the hen went into its nest, and soon after the cock brought some food and fed the hen; then he sat up on the tree and sang to me while I sketched the nest as best I could.—W. KEMP.

SIR,—In reading CAGE BIRDS last week, I noticed some breeders remarking on their early Mules; but I may state that I have three Canaries which were hatched on New Year's Day, and are still doing well.—R. SNEDDON.

THE BLEATING OF THE SNIPE.

SIR,—I see there is some doubt as to how the bleating of the Snipe is produced. The drumming sound is produced by the wings. The fact that the bleating sound is only produced while the bird is descending in a canted position, the wings vibrating rapidly, the lower wing more rapidly than the upper one, which was pointed out by Mr. Alston, of Darvel, goes to prove that it is produced by the wings. Mr. Barr, Mr. Stewart, Mr. McMillan and myself have heard the Snipe uttering the "chip, chip" note (which is produced by the vocal organs) at the same time as the drumming sound, so it cannot be the vocal organs. I know Mr. Seebohm favoured the vocal organs, but that theory is exploded. With regard to the tail producing the bleating sound, I do not believe that it could produce so loud a noise. Birds make more or less noise with their wings while flying, even although they have no tail; and I maintain that a Snipe could produce the drumming sound even although it had no tail. If any who are interested in this subject could get a few live Snipe and clip or cut off their tails (but not too closely), and let the birds fly, and watch their movements—also listen if they produce the bleating sound—and send a report to CAGE BIRDS, it would be very valuable information. Personally, I consider it a settled matter. I have seen a Snipe perched on one of the crossbars which support the telegraph wires; I also saw a Snipe perched on a tree.—JOHN CRAIG (Beith).

SOME RECIPES FOR GERMAN PASTE.

SIR,—Mr. G. Humphreys asks for a recipe for German paste. I append one, which has been in my possession for years. I do not believe in it for any kinds of birds, but there it is if it is of any use to Mr. G. H.:—1 pint of pea flour, well rubbed up with a new laid egg; 2 oz. of fresh lard; 3 oz. of honey or treacle. Rub this well, so as to prevent it being in lumps, and when got to a fine powder put it into a frying pan and place over a slow but clear fire until warmed through, continually stirring it to prevent it from burning. Then add 2 oz. of maw seed, or, if you like, hemp seed (the small Russian), whole.—T. H. KINCH.

SIR,—To make the above, boil four eggs until quite hard, then throw them into cold water; remove the white, grate the yoke quite fine, and add a pound of pearneal (white) and a tablespoonful of olive oil. Mix the whole together and press the dough through a tin collander so as to form it into a small grain-like shot; then fry them over a gentle fire. Keep stirring until they become of a light-brown colour, when they are fit for use.—JONATHAN BROOKS.

SIR,—Herewith a recipe for German paste, in reply to Mr. Humphrey's query:—Rub ¾ lb. pearneal with ¼ lb. coarse oatmeal and 1 oz. moist sugar. Then mix together 2 oz. honey and 1 oz. olive oil, and stir into the sugared meal until all lumps have disapeared; finally add half a pint of crushed hemp seed and a gill of maw seed. It is best to make it fresh every week, and it will then be found a very good food for Softbills, as the oil keeps the bowels in nice order and helps to cast old feathers during moult.—FRANK BATES.

[We have to thank Mr. J. Dawson (Glasgow) for a similar recipe.—ED. "C. B."]

THE KEYSTONE OF THE CAGE BIRD UNION.

SIR,—In all the correspondence written by supporters of the Cage Bird Union there has not been one single reason given why there should be such a Union. I think if fanciers who support the Union would give some of their reasons for doing so, it would make this subject more interesting. Some seem to think that those who object to the Union have no right to discuss it at all. They forget that there are two sides to every question, and they also forget that the best way to find the good and bad points of any subject is to have that subject thoroughly discussed by both sides. There is not the slightest doubt that there are many fanciers in favour of the Union; but I make bold to say that there are many more who are not in favour of it. It does not follow that because these fanciers object to the Union they are actuated by fear. What have they to fear, any more than those who favour the Union? No, it is not fear that causes fanciers to object to the Union, but rather a strict sense of justice. One of the greatest objections fanciers have to the C.B.U. is that it was forced upon the Fancy without first obtaining the sanction of fanciers throughout the country. Would it not have been better if a set of rules to form the basis of a C.B.U. had been drawn up at the first meeting of the delegates, and submitted to the great body of fanciers for their approval? Dare the C.B.U. take a vote of every member affiliated, to ascertain whether or not they are really favourable to it? How many have joined under protest—a sort of "passive resistance"? Let the Union prove that in the opinion of the majority of its members the Union as at present constituted is necessary for the welfare of the Fancy. But don't ask men who believe that the present Union is detrimental to the Fancy to "give it a chance" when they believe that by giving it a chance they are working against the best interests of the Fancy. Prove to those men that they are wrong in their conclusions. What would be the result? The objectors would be only too pleased to give way to the majority, and they would no doubt do their very best to help the Union and maintain a perfect unanimity within its ranks. What can be fairer than this? Another great objection to the C.B.U. is that it is coercive in its actions. Will any man believe that a really popular Union need be coercive? Let those fanciers who want a Union have one by all means; but they should not try to force others to join against their own judgment. We are told that there is a principle involved. Quite so. But when that principle evolves itself into a boycott, is it not time to draw the line? It is upon principle that men object to being coerced. Here we have a Cage Bird Union that we are told "is to be a father to all injured fanciers," a Union that will be "a boon and a blessing to the Fancy," and yet this Union has to form a rule like rule 17 to compel fanciers to join. Very convincing, is it not? We are also told that the Fancy is more than a hobby—that it is a commercial factor in life. That is only partly true. How many working-men fanciers look upon their hobby as a commercial factor in life? Very few, I think. The great majority of working-men fanciers keep their birds as a hobby pure and simple. If they can make their birds pay for themselves by exhibiting them, so much the better; that is only logical. We all try to do that, but it does not lessen the fact that it is as a hobby that we keep our birds. Then the only conclusion we can come to is that the men to whom the Fancy is a commercial factor in life must be those who partly or wholly make their living out of the Fancy. Exactly! That has been my contention from the first—these are the men who will benefit by the existence of the C.B.U., and in whose interests it was formed. Can this Union, as it is at present constituted, benefit the Fancy? To be really beneficial a Union should be thoroughly representative, and this Union cannot be termed so by any stretch of imagination. Then why support it? Why support a Union which admits that the only hold it has upon the Fancy is by coercion? Why should a working-man fancier, who spends his pocket-money for the welfare of his birds, be told where he may and where he may not exhibit them by a Union which, admittedly again, looks upon the Fancy as a commercial factor in life? Let a man show his birds when or where he likes, so long as he shows them honestly. Fanciers, as a correspondent stated last week, your reputation is in the balance, and, when the time comes, consider this question thoroughly, and remember that, while the C.B.U. deems rule 17 necessary to govern the Fancy, it exempts the Palace Show from it! Why so? Simply because the Palace Show won't have it. Surely we should expect the premier show in the country to abide by the rules of the C.B.U., and the fact that it will not should speak for itself. Now, fanciers, stand out for your rights! Never mind the "certain shining lights." There are also shining lights on the other side, "who are afraid their luminosity will be lost, etc." We as working-men fanciers want to look out for ourselves. If we must have a Union, let it be one that will attend to our real grievances, and let it be a national one. There will then be no need for coercion.—WM. REID.

SIR,—I was pleased to see the letter under above heading, signed G. W. MacPartling. It was very interesting. Every fancier worthy of the name admits that a Union has been long needed, and it is to be regretted that as soon as captain and mates have been found who are skilled enough to pilot the craft through the shoals, several individuals—each from apparently selfish motives—have mounted their little hills and "hurled offensive projectiles" at as good a ship as was ever launched. They know very well it is sadly needed, but because they are not at the helm, or have some personal objection to those who have successfully built and floated the ship, they will have none of it. So they aim at rule 17, because they know the C.B.U. cannot exist without it. Mr. Taylor asks if all Mr. MacPartling has written is fair, and bearing upon rule 17. Has Mr. MacP. not a right to enquire, as a member of the C.B.U., into the reason for those resolutions passed not to distribute the rules? I cannot see anything at all unfair or spiteful in his letter. He says the members are being misled, and he may think there is some connection between Gateshead and the Southern Club, without actually knowing who the misleader is. So how can he strike home, Mr. Taylor? One thing is certain: he has no axe to grind; and, further, I am sure he would not "tune his fiddle at someone else's expense." Perhaps he wonders, as I do, if it is possible for two fiddles to have the same harsh sound without a rub with the same bow? I am a member who objects to the resolution not to distribute the rules. When the C.B.U. accepted Mr. Ramsden's business-like offer to get rules printed free, they—the Union—were done with it, and if any advertisers have been favoured, Mr. Taylor, it was not by the Union. It was surely open to anyone to make the same offer as Mr. Ramsden did, and I suppose he had a right to please himself where he got his advertisements, so long as they paid for the printing. I would suggest that Mr. Lythgoe take orders now for space in the next rules at the same rates, all comers welcome, the profits to go to the C.B.U. funds, and Mr. Lythgoe to do the printing. Who could we find who has worked harder for the Union than the Hon. Sec.? Yo! Heavo oh! Lend a hand there, lads, to get the tackle in order; everything found unworkable must be thrown overboard, and in a little while our ship will be well under way. There is no fear of a press-gang when you want to sail in the good ship Union, and those who are afraid of sailing under the Union Jack had better give up all idea of being sailors, for they will surely be seasick before long. Fanciers, do not be misled, there is far too much axe-grinding going on. Stick fast to rope 17, for it is the strongest rope in the ship. Do not be robbed on the show-bench, or by the man who sells you a stock-bird at a fancy price because he wins prizes with birds bred by someone else. Railway charges are not by any means the worst evil fanciers have to contend with. Men are sadly wanted who are not afraid to expose fraud. Secretaries are wanted who will not be patronised. Judges are wanted who will disqualify birds, unless there is a doubt, when they should pass them. And, above all, unselfish fanciers are wanted who do not mind paying twopence two or three times over to help on good work. Are there more knaves than honest men in the Fancy? It really looks like it. A gentleman, in promising help to a certain society, said, "Yes, I will do all I can for you; but the moment I hear of anything not square and above board, I am done with it." This speaks for itself, and I, for one, sincerely hope rule 17 will stand, so that every society is bound down to help to purify the Fancy. That is all it means.—THOS. ROBSON (Hon. Sec. Northern Crest Club).

CAGES FOR MULE AND HYBRID BREEDING.

SIR,—I have given you a sketch of a good cage, which I have had in use, and made by my own design, 20 years ago, and at the present day I cannot find there is one to beat it. With care it is likely to last another 20 years. The only difficulty I find is it is rather awkward for me to handle when it requires the spring and autumn cleaning. It was made by myself, with not the best of tools, so it is of a rather amateurish nature. It is in three compartments each end, to hold a pair of breeding birds, the middle to act as a nursery cage for the young, as a sliding partition goes in each side of the middle division, half of which is plain and the other half wired, to enable the parents to feed the young through the wires. The division can also be used for the cock when you are using one cock with two hens, one at each end. I think from my description and sketch anyone will be able to make it. It will be of service for both Mule and Hybrid breeding. Although I have the water and seed bottles outside, I always put both inside when using it for British birds, so as to make sure that they can get their food and water; for Canaries it is not necessary. An old fancier saw the cage recently and greatly admired it. I always use the wooden nest-box with this cage, and let them build their own nests. When it is in use for Mule or Hybrid breeding the bottom is thickly covered with either moss or sawdust, in case any of the eggs are dropped from the perch. Many an egg have I saved in this way. The inside is whitewashed, and the outside stained and varnished. When cleaned it always looks neat and tidy; perhaps if it had been enamelled it might look even better.—T. H. KINCH.

BRITISH BIRDS AT THE PALACE SHOW.

SIR,—Your correspondent, Mr. S. A. Sandy, takes the biscuit. He, too, has a Great Grey Shrike, so he takes time by the forelock and lets the judges know about the fact in good time. He doesn't mean to have any mistake made about his own bird when he puts it down at the Palace and elsewhere next year! Let those concerned take warning! Perhaps the Palace authorities may spoil his little plan, however, by electing him to judge. According to his own showing, he seems a deal more competent than those who put up the cards last time. There is a deal too much "axe to grind" sort of business about this. I should like to ask him if his own Shrike was not bought from a dealer in Foreign birds? And how does he know the Lapland Bunting he mentions was not imported? In all probability it was. Mr. Birchley told us his Treecreeper had beaten Mr. May's bird previously under the same judge. Where was this? I have looked through the shows in CAGE BIRDS Mr. Cook judged at, and cannot find it. At Norwich Show, under Mr. Hills, however, I find Mr. Birchley was 4th with a Treecreeper, and Mr. Mays vhc; but your reporter, sir, says he was "decidedly lucky to vanquish" it, the latter being tighter and "richer in colour and markings." Mr. Mays didn't write to the papers and complain, though. He takes the decision in sporting fashion, and some others might well learn to do the same. It seems there is not much reliance to be placed on Mr. Birchley's statements.—W. LEWIS.

SIR,—Being interested in insectivorous birds, and having read the letters appearing under the above heading, I should like to say a few words on the subject. With regard to the Great Grey Shrike shown at the Palace, Mr. Birchley states in his letter that he reared the bird. The word "rear" I have always understood to mean to take young and bring up by hand, or under other birds; but I feel sure I saw this particular Shrike at the previous Palace Show, and I remember taking particular notice of it, as the bird had knocked the feathers off its forehead and had cut a nasty gash in its forehead, over the eye, or close to it, through constantly jumping at the wire at top of its cage, the cage having the wire front curved over a short distance off the roof. I thought at the time that the bird would never fill up the gap in its forehead, but would retain a bare place or scar; but if this is the same bird—and I feel convinced it is—then he has filled up the gap and, what is more, he has grown the feathers so well over it that one would hardly think it was the same, unless they had taken particular notice of the shape and markings of the bird. If it is the same bird, the owner (Mr. B.) must have made an error in stating that he reared it; however, I think it is a very nice specimen, and very pure in colour and markings. It is not one of the largest, but we can't get everything. I have a much larger one, which stands well up on its legs, like a Yorkshire Canary; but, being a younger bird, it is not so pure in colour. There is no doubt about the Great Grey Shrike being one of our rare British birds, but there are other rare ones as well. I certainly disagree with Mr. Birchley when he states that the Treecreeper is easier to keep than the Shrike. The Great Grey Shrike is comparatively easy to cater for, being a more gross feeder; whilst the Treecreeper is a delicate feeder—that is to say, the former species will do well if fed upon cockroaches, bumblebees, grasshoppers, cockchafers, mice and small birds, and a little cooked or raw meat in addition to its staple food. I noticed a tremendous amount of chopped-up meat in its cage at the Palace, and it was well that the weather was cold, instead of muggy, or it would not have kept fresh. Evidently the amount of meat placed there was intended to last throughout the show and until the bird reached home. Now, the Treecreeper's food consists of minute insects found on the trunks and branches of trees, such as spiders, small soft grubs, flies, gnats and larvæ of small insects, and in captivity we have to find a substitute, and that is where the difficulty lies. With the Shrike, the food mentioned above is practically its natural food, and in making the awards a judge, to my mind, should take into consideration which is the most difficult to keep in captivity in perfect condition, as well as rarity. Mr. W. Cook, I think, states that his Nutcrackor was caught in Scotland. If that was so (and no doubt the owner could prove this), then the Nutcracker was certainly the rarest British bird; but if the bird was an imported specimen, then Mr. W. Cook has also made an error; but I think we should give the owner the benefit of the doubt until we can prove him to be in error. If I caught a Dartford Warbler, Black Redstart, Blue-throated Warbler, or any other rare bird, and placed either upon the show bench, and it was passed as not being a British bird, or as an imported specimen, I should naturally feel disgusted and annoyed, after my trouble of catching and exhibiting such a rare species in fine condition. But there has always been a difficulty with the rarer species as to what constitutes a British bird. Some hold that, unless the species has been found breeding sufficiently in the British Isles, it should not be proclaimed a British bird. This, I think, is quite a mistake. Take, for instance, the Black Redstart. Here is a species that migrates to this country in the late autumn in greater or lesser numbers, but if we are to wait patiently until this species breeds here before being able to call it a British bird and show it as such, I am afraid our patience will be sorely tried, for it is very unlikely that the Black Redstart would so far forget himself as to stay beyond his proper time in this country in order to oblige us by breeding here. The same may be said of the Waxwing and others, yet, although the species may come to us pretty regularly, we must discard it until it unnaturally breeds here instead of in its proper country abroad. Personally, I think, we should rule that any species that has been caught (or shot, which is more often the case) in this country should be pronounced a British bird, and if many of the rarer birds were not shot as soon as they arrive, no doubt those species that arrived in the spring would in time breed here; but, unfortunately, they never get the chance. If the birds were caught and kept alive, there would be something to look upon and to study far more interesting than a stuffed skin in a case. As it is now, the Waxwing and a few others are recognised as British birds and allowed to compete on the show-bench, whilst others are not. Of course, I am aware of the difficulty that would arise if these rare birds were admitted as British birds; we should have some of them undoubtedly imported, but I don't think anyone could see any difference in, say, a bird proved to be caught here and the one imported, except some might with age be rather brighter and their markings more fully developed, as is the case with the whole of our British birds. I don't see how we could prevent some of the birds being imported. If anyone particularly wished to get a specimen of our common Redstart from abroad, and it was exhibited, no one could see any difference, or would look for any difference in the bird; and who is to say that if that particular Redstart was not caught in its winter home, it would not migrate to this country in the spring of the year? It is quite possible that it would do so. For my own part, I don't see why we should want to bar birds being imported, so long as the specimen is of the same species that has been caught or shot in this country. Now, with the Bearded Tit it is quite a different matter. Here we should certainly pass the Continental specimen, and why? Because not only is there a great difference in colour and size (which can be seen at a glance) compared with our Norfolk Broad bird, but because it does not migrate to this country like the other species already mentioned; at least, I have never heard or known of one being shot or taken here. The same remark applies equally to the Continental or white-headed long-tailed Tit, and at the Palace Show I had very strong suspicions that the Long-tailed Tit that did not get a card (and was looking rather thick and out of condition) was of the Continental species. Perhaps I was mistaken. We are all liable to make mistakes, I know, but although I have kept many, and am thoroughly acquainted with the British Long-tailed Tit, I cannot remember ever having seen one with the white on head so very largely developed. Perhaps it was an accidental variety of our British species. I may say that, with regard to the awards in respect of the three species under discussion (but please don't think that I wish to pose as the only person that ought to have an opinion)—the Great Grey Shrike, Treecreeper, and Nutcracker—if the latter was caught in Scotland, then it was the rarest of the three birds, and entitled to the special for the rarest British bird. Of the other two birds, Shrike and Treecreeper, the Shrike was certainly the rarer of the two; but the Treecreeper being more difficult to keep and maintain in show condition makes the two birds on a par, and either of them deserved the cup for best British. But as the cup could not be cut in half, the judge, no doubt, in awarding it took into consideration the difficulty of keeping the small Treecreeper as against the Shrike. —P. F. M. GALLOWAY.

SIR,—With regard to the letters of Messrs. Cocks, Woodhouse, Wm. Cook, Davidson, and "J.P.S.," I once more state that I am not at all disappointed over the awards. I am confident also that less important matters have been discussed than this in your valuable paper. In the first place, I don't think the above-named gentlemen have ever kept a Great Grey Shrike, or they would know more about it; it is clear to me that they are not familiar with the bird or they would talk very differently. At the same time, I hope they may have one and try their luck; and let us know through your valuable medium if they are "all honey," as they would try to make your readers believe. I see someone suggests that the bird I exhibited was steady when I had it; I beg to contradict this statement. As a proof, I purchased the bird from my friend, Mr. R. J. Howe, soon after the Palace Show of 1906, and if your correspondents went to the show and saw the bird there, I think they will admit the bird was wild—so wild, in fact, that he knocked himself about somewhat seriously at that show. In my opinion, the Great Grey Shrike is one of the hardest (if not the hardest) of birds to steady, and if your correspondents want something to do, I can send them one about as steady as when I had this, and let them have a go at it. Then it is said they are easy to rear. Try it, my friends, and win at the Palace next year. I am afraid you will wish the Shrike at Hanover before the Palace Show comes round, unless you have the patience of Job, as I have had to have with mine. Perhaps it may interest your correspondents further if I state that the specimen that we are now discussing had to be hand-washed, as I could never get him to wash himself; that is a very nice job. I have had my hands cut on many occasions when giving him a tubbing, and, of course, you can't wear a glove, or you would spoil the plumage. Taking again the matter of food, this is most difficult to obtain all the year round, and it is necessary, I find, to keep changing it if he is to be kept in A1 form; and I also find that very little beef must be given. I think your correspondents forget all this. Taking Mr. J.P.S.'s letter, he says that as the Nutcracker visits these Islands occasionally, he has a right to compete as a British bird. If this gentleman is going to suggest that our shows are to be run on these lines, viz., imported birds, then we have the "open door" at once, as in that case the Golden Oriole and Pastors and all other imported birds are eligible to compete as British. Further "J.P.S." asks, "How do I know my Great Grey Shrike is a good specimen?" I would like to say I have seen four quite recently, and have not seen one to come up to him yet in size and markings. As regards the Shrike being a well-known specimen, as he asserts, I think he has overstepped the mark here, considering the bird was only exhibited twice. Why doesn't this gentleman sign his full name? With regard to Mr. Cook, the exhibitor of the Nutcracker, I think now that this matter has come to the point (vide Mr. Sandy's letter last week) it should be sifted out, for the sake of all concerned I don't know Mr. Cook, or Mr. Sandy; but this is a matter for further discussion. Mr. Sandy's letter was of great interest to me, as he has a Shrike and can speak from experience. I have found Mr. Sandy's articles of a most interesting character, and have also found, on following his hints on various things, that they have come out successful. This matter should be discussed further, so that we may know what is eligible to compete as a British bird, and what is not.—S. W. BIRCHLEY.

ALLEGED CASE OF BORROWED BIRDS AT CREWE.

SIR,—On looking over the Correspondence columns of "C. B." I was greatly surprised to see the letter under the above heading signed "Fairplay," and, as chairman of the Crewe O.S., I feel it my duty to reply to the rambling statements made in same. In the first place, "Fairplay" says: "Ever since Crewe Utility Society held their open show on Nov. 21st there has been talk about an alleged case of borrowed birds," and goes on to say that the Secretaries of both societies had full knowledge of it. Now, I may say the first intimation I had of the affair was a statement made to myself and the Secretary of the C.O.S. on the night of our Members' Show, Feb. 23rd, by "Fairplay" himself, and I believe the subject was not mentioned to the Secretary of the Utility Fanciers' Society until March 5th. Now, if "Fairplay" has known of this ever since the show on November 21st, 1906, why has he lost three months' valuable time in bringing the matter before the notice of the two societies? "Fairplay" says he has reported to the Sec. of the C.O.S., but he says the Secretary declines to take action. I cannot see that it is the business of the C.O.S. to take the matter up, as the alleged offence was committed at the Utility Fanciers' Show—that is, according to "Fairplay's" letter; but if "Fairplay" will attend the next general meeting of the C.O.S. (of which himself, the alleged offending exhibitor, and the one who has made the statement are all members), and will make a specific charge against the exhibitor, then I am sure the committee of the C.O.S. will be prepared to deal with the matter in a business-like and straightforward manner, without fear or favour, and "Fairplay" will have some right to use the nom de plume he has adopted. But we must have something more tangible than hearsay to work upon.—J. W. LAWTON.

SIR,—I was surprised to see in last week's issue of your valuable paper, CAGE BIRDS, the account of an alleged case of borrowed birds at the Crewe Utility Society's last Open Show. I think that if "Fairplay" had got his proofs and handed them to his Secretary, they would have been brought before the proper authorities, and they could have come to some settlement. But they can do nothing without proof. I do not know why he mentions the late Secretary of the Crewe O.S. I think if he ("Fairplay") had been a straightforward man, he would have left the late Secretary out and have made his objection to the present Secretary. (This with all due respect to the late Secretary.) I hope "Fairplay" will bring the proof needed, or let the matter drop.—A. WILKINSON.

SIR,—I notice in last week's issue of CAGE BIRDS a letter from a correspondent who signs himself "Fairplay," in which it is stated that ever since "the Crewe Utility Society held their Open Show on November 21st there has been talk about an alleged case of borrowed birds." Well, sir, there may have been talk amongst a certain set, but I thought it had ended in talk. In any case, I did not know anything about the matter until about three months after the show, when I was told by a certain gentleman that he had heard that another man had shown a borrowed bird—this without giving any names or any further particulars. At our monthly meeting, held on March 5th, one of our members brought the matter forward, but he was just about as clear as the first gentleman. He said there had been this talk by this other man about a certain person who had borrowed a bird. I pointed out to him that before anything could be done it was necessary that I should have a written protest, then we would see what could be done, although, seeing that it was now four months since the show was held, such a protest would be rather belated. Your correspondent says: "Now, both the Secretary of the Utility Society and the late Secretary of the Ornithological Society are in full knowledge of it," and asks the question, "Why either one or both secretaries do not go to see the man and get him to make his statement before witnesses?" Well, speaking for myself, I do not know the name of the person who is willing to make this statement. How, then, can I go and see him? It is a case of "you go, never mind where he lives." But I should like to remind your correspondent that it is no part of a secretary's duty to go hunting about the country for an anonymous person without an address. If your correspondent has a grievance, why does he not play the man and send in a written protest, according to rule, giving full particulars. If he will do this, I shall be pleased to call a meeting of my committee to hear what evidence he may have to bring forward. But if he still persists in talking and nothing else, he may talk till Doomsday, as I shall take no notice of his talk until he has complied with my request to send in a written statement. But if he is so anxious to see justice done, he will not hide his identity under a nom de plume, or wait until the Secretary of the O.S. or myself run "him to earth," but will send in a written protest, and then come forward like a man and, through his witnesses, prove what he has written; then, and not till then, shall I consider his nom de plume ("Fairplay") rightly chosen. I have something better to do than go running about looking for a mythical personage. Neither can I find time to enter into a voluminous correspondence on the subject. But when the protest is sent in, I have no doubt my committee will be pleased to investigate the case as far as possible; until then we cannot do anything.—W. EVANS, Sec. Crewe U. and F.A.

ALBINISM AND ITS MYSTERIES.

SIR,—I read with interest the various letters on Albinism, as I take note of all whole or partial Albino birds which come under my notice in this district (Midlothian). We had an Albino, a white, pink-eyed Starling, feeding among our poultry at Eskbank. It was seen repeatedly, was caught, and escaped. Also a partial Albino Greenfinch at Campend. I am trying also to get verification of a much rarer specimen, said to frequent the North Esk—viz., an Albino Water-hen (Moor-hen). I saw by your columns that an Albino Lapwing had been shot. It is strange that Albinism is rarest in those species which have white as part of their normal colour. I may state that the specimen I wrote of before as being in my possession is a Hedge Sparrow; it is doing finely, and is a grand singer. This bird, contrary to the generality of Albinos, is extra large. Another strange thing I notice is that among the many partial Albino Blackbirds we have, I have only seen one here. I enclose the wing of a Jay which seems to be a queer one; the body was a mixture of cinnamon and white. I am not certain of the various immature, sexual, and seasonable changes in the Jay, so your opinion would oblige.—J. STEEL.

[The wing sent by Mr. Steel was submitted to our Mr. G. E. Weston, and he reports it as a case of rare plumage, and due to neither immature, sexual, nor seasonal changes. He says: "The mixture of cinnamon and white is most uncommon and pleasing, and this particular Jay must have been a very beautiful creature when in the land of the living. Only a trace of the blue wing-bars is left, white feathers taking the place of the latter. The wing coverts are entirely pure white, and the lesser wing coverts rich cinnamon—a charming contrast."—EDITOR.]

THE SQUARE FEATHER CONTROVERSY.

SIR,—Having personally inspected the disqualified birds at the Palace, I am very much interested in the discussion arising thereon, although not a breeder of the Green variety. I would not for a moment put forward any suggestion which might assist in screening any fancier who had been guilty of faking, but I should be only too glad to assist in clearing up such a case as that under consideration, where apparently a perfect honest exhibitor might be suspected of dishonourable conduct. Kindly, therefore, allow me space to enquire whether any of those fanciers who are troubled with the square feathers have any suspicion that the damage is done by insects? Some years ago I kept white Jacobin Pigeons, and upon several occasions found ordinary body feathers upon the birds perfectly square at top, as if cut with a pair of scissors, with others not so clearly cut. I traced this to a long, thin, dark-coloured louse, not the kind which I have seen upon the bodies of young Pigeons in the nest, which are lighter in colour and broader in body. The kind first referred to I found upon or amongst the feathers only, and not upon the body, and some of them in the quills of partly-developed feathers. I have recently seen Mr. Houghton upon the subject, with a view of obtaining, if possible, some specimens of feathers so eaten, but, having disposed of his Jacobins, he could not oblige me. He told me, however, that fanciers welcome the existence of this feather-eating insect upon their birds, as it clears a quantity of under flue and web from the bird's body feathers, and consequently allows better ventilation to the body. I suggest, therefore, that fanciers make a very careful examination of their stock upon next season's moult, in case their troubles may arise from the same cause. The base of the neck and the upper part of the shoulders would form a very desirable haunt for such insects, as it is not so easy of access to the bird in picking over and pluming its feathers. Perhaps some further light may be thrown upon the subject if this suggestion receives careful consideration. I have not yet detected such a thing amongst my own Canaries. I may say I mentioned this matter to Mr. Ramsden and one or two other fanciers at the Palace Show, and quite thought that the question would be raised, or I should have written before this.—CHAS. J. HOWLETT.

CHAFFINCH-BRAMBLEFINCH HYBRIDS.

SIR,—I notice Mr. Kinch wishes to know how the above are bred. With your kind permission, I will let him and others interested know how I managed to rear five. To begin with, I have an outdoor aviary, 20 in. by 9 in. by 9 in. At one end there is a space 9 in. by 6 in. by 9 in. divided off, in which I breed a few Sib Canaries and Mules. Five years ago I had a pair of Chaffinches flying in the large aviary. When they were put in I did not expect they would breed, but, to my surprise, the hen built and laid four eggs, which she hatched. So, to allow them to get insects, I covered the floor of the aviary with horse manure to a depth of one foot. I also gathered from rose and plum trees all the twigs which carried green fly. On this and their ordinary seeds the parents fed and kept them alive for about ten days; then they dropped off. The following year I took out the Chaffinch cock and put in a Bramble. The pair went to nest. This time three eggs were laid, two hatched, and both lived for 14 days, when one died: the other turned out a fine bird, which I sold at a big price to Mr. Ball, of St. Helens. This bird was reared in the same way as the Chaffinches, with the addition of mealworms. The next year I reared four in the same manner, and they were all shown by big exhibitors; but I am sorry to say none of them met the success I expected. Mr. Williams, of Liverpool, showed one of them at the last Palace Show, and in the report the judge put it down as a hen Chaffinch. There is not much good in breeding rare Hybrids when we cannot get judges capable of detecting the parentage. I have bred a lot of different Hybrids, but I don't believe in lifting eggs from the parents and placing them under Canarics, but allow every pair to hatch their own on the foregoing lines. The largest nest I ever reared was six Goldie-Siskins, five cocks and a hen.—J. HOWE, Dundee.

SIR,—In your correspondence I see my name mentioned by Mr. J. H. Verrall re this cross. I have tried for the cross for over 20 years, in both ways, and the more I study it the more I am fogged. There have been several Hybrids bred from this cross on the show bench; in some reports it is the Bramblefinch-Chaffinch, and otherwise the Chaffinch-Bramblefinch. Now let us get to the bottom of it. As a very old breeder of the cock Chaffinch (or, I should say, a trier), I want something authentic. I do believe in this cross; but I think it is the Bramblefinch-Chaffinch. Take the last Palace Show, when Mr. Williams's Hybrid was disqualified as being a hen Chaffinch. Now, Mr. Williams does know, or certainly ought to know, a Hybrid, for I think he has had enough years of experience. Would he be "sold" over the bird he exhibited? What about his first Canary-Bullie? This bird made a sensation over its parentage. Would the breeder of his disqualified bird give its history? What about the others shown of this cross? I saw a letter from a lady to the Mule Club, a few weeks back, about this cross. Happy ladies! They are the most successful in Mule and Hybrid breeding; probably it is their patience which is the greatest virtue in this hobby. Will all those who have tried and been successful give their experiences? Then we shall be able to learn "something," besides being convinced as to this cross.—T. H. KINCH.

WILD BIRD OBSERVATIONS.

SIR,—Living out in the country, I sometimes take a walk out in fields and woods in search of bird life and nests. When out some weeks back, during the fall of snow, I found a Blackbird's nest, with two eggs in, deserted, owing to the cold weather. The nest was at the back of a shed, the sides of the shed being filled all round with hopbine. I have found nests there previously. There are trees and bushes close to it, a pond for ducks below, and bank on opposite side with trees and bushes. It is a very quiet and shady place, and a favourite spot for the Nightingale when here. Being out on the 18th, in another wood, where there are plenty of Blackbirds' and Thrushes nests during the season, I could not find any sign of nests at present. A farm labourer and his son, who live close by, asked if I had heard the Nightingale yet. I replied I had not. They both said they had heard it the last day of February, and again early one morning. They well know the note, as, living between two woods, the Nightingales are often only a matter of a few yards away from their door, and I often go that way to listen to them. I also get the first information of the arrival of the Cuckoo from there. It is a treat worth listening to when several answer each other in the surrounding woods before the arrival of the hens. A person who lives on a farm about two miles further on tells me they had a nest of Starlings under the roof of their house in January.—F. J. WEAIRE.

BLACKBIRD-THRUSH HYBRIDS.

SIR,—I have always been interested in the question of Blackbird-Thrush Hybrids, for I once considered I found some myself, so I send you the enclosed cutting from the "Yorkshire Evening Post," which has something to say on the matter:—Not for many years (writes our Washburn Valley correspondent) have there been so large a number and variety of birds round our doors as during the present winter, hunger having made them tame. "Billy," the Blackbird, whose acquaintance was made last year, has been very conspicuous again. Last year he nested in a hawthorn bush not a stone's throw from his winter feeding ground, and all through the summer he paid occasional visits to it, sometimes perching on the top of the wall whilst he showed his appreciation in a glorious song of thankfulness. He is an eccentric fellow, and shows much resentment to the members of his own species, so much so that at last nesting time he successfully wooed and won a plump maiden from among the Thrush family. There was no mistaking his mate, for she was many times observed in the nest, and also engaged feeding her young family of four. "Billy" has this season been admonished on several occasions for his violence towards other visitors. A Robin with a damaged wing is, however, the Blackbird's pugilistic match, and it is great fun to see the two preparing for an engagement over some scrap of food. Among the favoured birds which "Billy" tolerates are an unusually large number of Blue Tits and cock Chaffinches.—A. PICKLES.

(Several letters crowded out.)

An admirable Food of the
EPPS'S
Finest quality and flavour.
COCOA
Nutritious and Economical.

For the small sum of Sixpence 6D.

You can obtain on order from your newsagent the one and indispensable book of reference for cage bird keepers,

"CAGE BIRDS" ANNUAL
for 1907.
PART I.

This Complete Guide to the fascinating and profitable hobby of bird-keeping now appears before the public for the fifth year. Anything and everything that the bird fancier requires to know will be found in its pages. Just read this list of contents:—

	Page
Calendar	4
Call Notes and Song of some Common British Birds	7
Feeding and Rearing of Young Canaries	13
Thoughts on the Matching of Canaries	19
Mule and Hybrid Breeding	21
The Pet Bird	27
Some Pleasing and Beautiful Foreign Birds	31
Year with the Wild Birds	35
Diseases of Cage Birds	39
Review of the Exhibition Year	49
Glossary of Terms	65
Societies, List of	83

STRAY NOTES ABOUT BIRDS.

BY CLAUDE ST. JOHN.

A Musical Comedy.

This phrase might aptly describe the condition under which these stray notes are begun. The sun is shining brilliantly, and although the March winds do blow rather boisterously they come not from the blighting east, as they have done for days past, and they are by comparison mild, if not warm. The effect of such a foretaste of spring upon the caged birds is noteworthy. Their one object in life to-day after satisfying the cravings of the inner creature seems to be to pour out their souls in song, so that I begin these notes in a babel of sound that is comedy indeed. Musical, bah! A professor of that divine and cultured art might turn sick with horror and shock at such a diverse medley of sounds, but the real lover of Nature and her birds cannot fail to feel an enlivening and elevating influence in the strains, and to call them musical, even though one cannot avoid the admission that they are somewhat of the comedian type.

The Principal Performers.

The bare mention of the principal performers of the moment might cause one to express disgust in a sickly smile, but, then, it's a babel that has to be heard to be understood. There's the alto rolling and bubbling of a cultured Canary as the chief leader of the choir; the almost equally incessant crescendo trill of a Skylark, given in a pleasing undertone, for he has not yet reached his full, or ear-piercing, stage of song, as second performer; the lilting, indescribable songs of a Bullfinch are thrown in at frequent intervals; and, horror of horrors, the expressive strains of the Zebrafinch fill in a lull here and another there, and each one sounds so strikingly like a saucy rendering in the vernacular of the locality of the words—"Yo caw whistle like that, yo caw; yo caw whistle like that," that it's difficult at times to restrain one's risibility, for it is an apt and pert strain that haunts the memory for some time after it ceases. Then, to complete the choir, there's the "choo, choo, achoo," of a Pekin as a kind of bass drummer to mark time. What if one does hear the rusty-hinge-like "chacha" of the Bullie at intervals, or a series of the trumpet bugle calls from the Zebra, the Dan Leno of the little company, and a variety of stray notes and calls from outsiders who are taking no active part in the performance. They all seem to find a place in the general babel of music and to be almost, if not quite, shorn of that harshness and jarring sense which characterises them when heard alone. Talk about the society of one species "spoiling" the song of another. Bah! Is not variety the very spice of life?

How Tits Roost.

The general impression that wild Tits roost together in companies for the sake of warmth is still very widespread. It is a point that might be so easily proved by close and proper observation that it ought never to have existed until now. Years ago I recorded my own observations, which were subsequently verified by a number of other observers, to show the error of this idea, which was being passed on by a modern authority, apparently from the unverified opinions of previous writers. Curiously enough the authority seems to have veered round to the opposite opinion, but, of course, without any acknowledgment of the source of information. Close observation would, I believe, quickly convince anyone that the Tits are far too pugnacious to allow of any company in sleeping quarters—except, perhaps, the Long-tailed Tits, which go in companies by day.

German Paste.

Is it really worth one's while, or good for one's pets, to seek to know how to manufacture this out-of-date, and, in a general way, undesirable food? A mixture of two parts of bread crumb, and one part each of good ant cocoons and either preserved yolk or finely chopped hard-boiled egg, is an easily prepared and much better staple food for birds, and if it is always prepared fresh and often any risks that would otherwise accrue are reduced to a minimum. German paste, which was once so popular, according to the old fanciers' recipe consists of pea meal, honey, lard, maw seed, and egg, with or without hemp seed. The proportion of egg is but very small, and when the whole is cooked by frying it to the proper colour it forms a fine compound for upsetting the health and digestion of any but the hardiest birds. Instead of giving the proper proportions and details of making I would advise the enquirer to forego the idea of making such food, and adhere to some more wholesome staple diet.

My Norwich Plainheads.

How I Breed, Moult and Exhibit Them.

By JOHN W. BANCROFT.

A Lecture delivered before the Bolton and District Progressive C.B.S. on March 5th, 1907.

Mr. Chairman and Gentlemen,—It is with a certain degree of diffidence that I come this evening before you, to express my views on the Norwich Plainhead Canary. The ground has been so well trodden and by so many during the last few years (by some whose vast practical experience has specially fitted them for the task), that it appears to me a somewhat difficult problem what to say that may be new and original. However, as the present time appears most opportune for the purpose, inasmuch as this Society has been considerably augmented of late by novice recruits, I venture to trust that no apology is needed in giving this lecture.

It is now some twenty-five years since I first began the keeping of Canaries, commencing with those much maligned beauties the spangle backs, to wit, the Lizards. Since when, I have at different times, kept almost every variety. But it is a considerably shorter space of time since I took up the Norwich Plainhead in earnest. I think it was about twelve years ago that I first supplied a winner in open competition to a prominent exhibition in the north, since when I have been fairly successful, both with my own birds, and those I have sold to others. I think that I may justly claim, without fear of contradiction, to be the champion exhibitor of Norwich Plainheads in this district, as, during the last show season alone, I have achieved successes such as have never before been attained by any other single exhibitor, or firm, in Bolton or its environs, either past or present. I have secured the Norwich Plainhead Club's championship gold medal for best bird in champion section at Manchester Cup show, also first prizes (and with birds of my own breeding) at the great Scottish National Cage Bird Show held at Edinburgh. That show and the Crystal Palace Cage Bird Show stand as the two premier Cage Bird exhibitions in Great Britain.

THE BEST VARIETY FOR THE NOVICE.

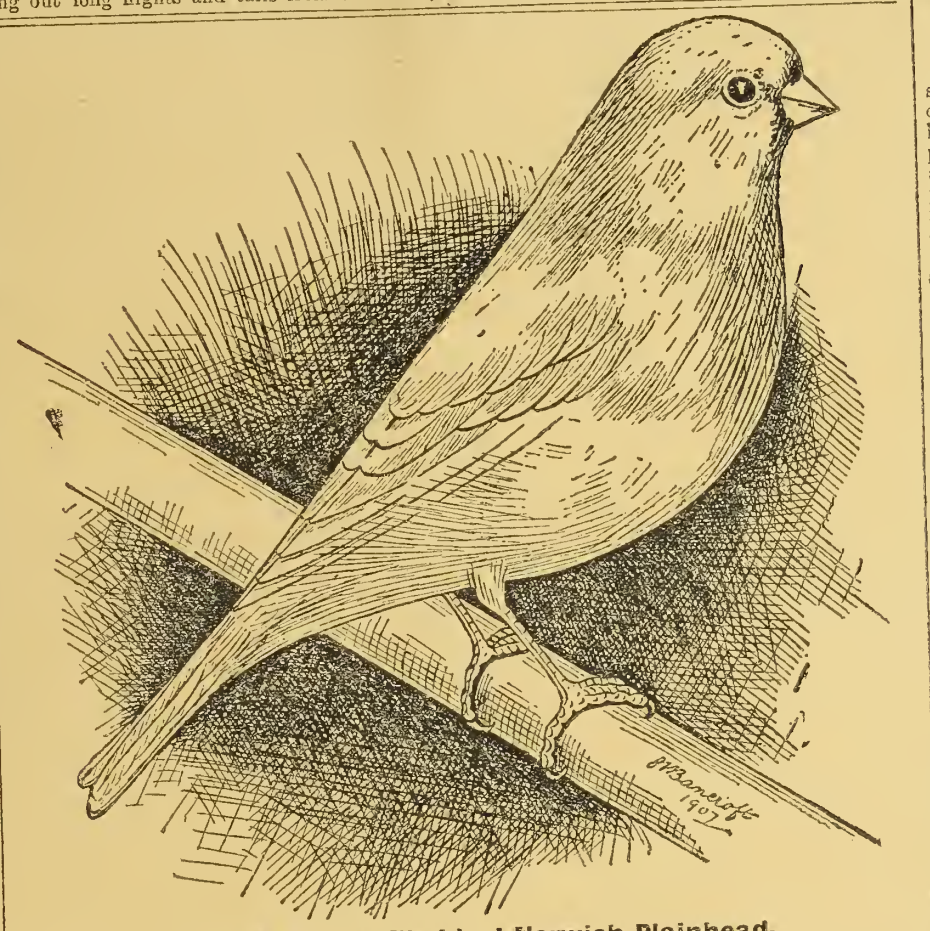
The Norwich Canary, I consider, is essentially the best variety to take up for the beginner or person with limited means, for the following reasons: (1) With its sprightly shape, close and compact plumage, and beautiful colour, it makes one of the most attractice cage pets of the Canary tribe; (2) It is one of the hardiest, if not *the* hardiest, variety, and therefore very easily managed; (3) If you happen to breed a really good one, and you care to sell it, there is always a good figure to be realised on it: (4) That although there are, perhaps, more of this variety bred yearly than any other, comparatively few really tip-top specimens make their appearance on the show bench each season, so that there is a wide scope for those who elect to take up the pursuit of breeding and exhibiting the Norwich; (5) The surplus, if bred from good stock, are usually easily disposed of for stock purposes, whilst the "wasters," as they are termed, find a ready sale amongst dealers as singers.

THE IDEAL SPECIMEN.

I will now give you my idea of what constitutes a typical Norwich Plainhead. The ideal specimen is a large bold bird, standing well across the perch (to use a common expression, as much in front and as little behind as possible), having a jaunty, fearless look, and showing no signs of shyness or nervousness when you approach. In length, not to exceed 6½ inches, from tip of beak to end of tail. It is surprising what a big bird you get at this length, providing he possesses substance, with short flights and tail. The skull should be broad, without being square-looking or browy, showing a nice sweep from base of beak, to back of head. The beak must be short and thick; the neck short, full, and running gracefully into a good chubby body which should be of a nice wedge or pear shape. Shoulders wide and well filled; the wings ought to fit very closely at the shoulders, so that when looked at from the front the butts cannot be seen, and meeting feather to feather at the tips, forming a V shape, without any suspicion of crossing. The legs should be of a medium length, held slightly bent from the elbow (giving the bird the appearance of being always ready to take a spring from the perch), neither too long, nor yet too short, which latter gives the bird a squatty or crouchy appearance on the perch, whilst the former gives a stilty look. The back should be broad, just a shade flat-looking on top, but nicely rounded at the sides; the chest deep, well rounded, free from any frilling or twist, and tapering to a nice, clean cut waist. Tail short, closely folded together, and well filled in under. The eye should be large and bright, and set in the centre of the head, not near top of skull, as some are, which gives a bird a bad look. The colour should be rich and level throughout, and the feathers short, dense and very silky in texture, which is called quality. In our Norwich, there are threo necessary points, which wo must never lose sight of, viz., colour, quality and type.

SOME DEFECTS ENUMERATED.

The following are some of the defects to be guarded against: Browing or lashing, or horny feather on head (the latter is very difficult to breed out when once it gets hold of a strain), crossing wings, long flights and tail, which is a very serious failing, especially in hens, in fact I would utterly discard a hen for breeding show stock from which failed in this respect. If on the cock side it may often be remedied by pairing him up to a hen extra short in flights and tail. The Norwich breeder finds just as great a difficulty in breeding out long flights and tails from his stock, as the Yorkshire breeder does in breeding long flights and tails into his variety. Other faults are hollow neck, snaky head, tail falling away from rump, or hinge tail as it is usually termed, seeming as though it were too heavy for the bird to carry properly; also fish tail, that which opens fan-like at the end; narrow or pinched skull, flat ditto; harsh, coarse feather; frilling on breast or neck; long legs or legs too short. I have accompanied these remarks by a rough sketch of what is, in my opinion, an ideal bird to breed to. Having now given you some idea of the kind of bird required, I will endeavour to explain the method I adopt when putting my birds together for the breeding of the same.



Mr. J. W. Bancroft's Ideal Norwich Plainhead.

THE STOCK BIRDS.

In the first place, let me say that, in my opinion, as stock birds for breeding show specimens from, nothing beats a pair of show birds themselves. I mean proper show Norwich, large, bold birds, each the full exhibition size. Not those nice little undersized birds which sometimes manage to creep into the prize list. I care naught for this class, either cocks or hens. Almost anyone, with fairly moderato stock, can turn these "nice little good 'uns," but it is the "big good 'uns" we want for the show bench. But I fancy some of you may ask, "What must we do when we do not possess winners to breed from?" Well then, failing show birds we must use the next best thing, and these are good stock birds.

Now supposing I had a very large yellow cock, over standard size, of extra good colour, just a trifle long in barrel, and correspondingly long in flights and tail, with perhaps a little browing or lashing over the eyes; good broad skull and full short neck, and he may not possess extra good quality of feather. For his mate I should select a medium or even small sized buff hen, providing she came off good sized parents; small hens from small parents I never use, as no matter how large a given pair of birds may be which you mate up together, there is always the tendency in the offspring to revert to their ancestors, and come smaller than the parent birds. The hen under discussion must be short and thick-set, very short flights and ditto pipo tail, with a nice clean, broad, rounded head, of extra good type, and she should be literally teeming with quality.

Or, again, supposing I had, say, a medium-sized yellow cock, moderate colour but splendid quality feather (but perhaps failing a little in neck), with a nice clean head, free from any suspicion of browing, rather narrow in cheeks, a trifle pinched in skull, but very clean cut away under—for this one's mate I should select as large a hen as possible, high up in colour, with plenty of chest, and extra full in neck and cheeks. It should have a good wide head, and perhaps just inclined to browing a little. It must be also of good shape and carriage; a trifle loose feather at waist might be permissible in this case, and so on all along the line. Very small cocks with large hens I have not much faith in, as a rule, although at a pinch I should, if the need arose, put such birds together, on the offchance of their turning out something good. But you will very rarely find a small cock sire birds of much good for the show bench.

We are continually having it drilled into us that the size and colour come from the cock, and the shape and quality from the hen. This, I admit, is true to a certain extent, but not to the extent many would have us believe. If this were so we should not have the slightest difficulty in producing show birds galore; all that we should have to do would be to procure a large cock, possessing heaps of colour, pair him up to a small or medium sized, good quality typical hen, and then, heigh presto! every youngster in a nest would turn out a winner. Fortunately, or unfortunately, this thing does not occur in practice. Winners don't turn up in every nest not by a long chalk. The great point in the breeding of exhibition Norwich is the selection and mating together of your breeding birds. Experience, and the use of brains in pairing up the birds in such a manner that where one possesses a fault, its partner excels to a great degree in that particular point, this is the way in which the intelligent fancier makes headway with his stock.

CONSANGUINITY, OR IN-BREEDING.

Consanguinity, or breeding in and in, are expressions used to denote the breeding of Canaries or other creatures closely related together. Regarding this practice some have asserted that it is an utter failure. This, to my mind, appears a clear index to the lack of knowledge and experience on the part of those by whom such an assertion be made. In-breeding, I affirm, is necessary to fix and establish certain characteristics in any variety of live stock. I have conclusively proved to my own satisfaction that in-breeding may be carried on to a fair extent and with satisfactory results, if done judiciously and intelligently, using only such birds as are well up in size and in full health and vigour. Of course, two birds possessing a certain fault must not on any account be paired together, else the fault will be intensified to an alarming extent, far more so than if the birds were entirely unrelated.

I have made extensive experiments with a Light Muling strain, also with Yorkshires and Norwich. I have bred from father and daughter, the union of which has resulted in larger birds than their sire; I have paired son to mother, and got similar results; I have also paired brother to sister and bred winning Norwich this way. You may depend upon it, there is a great deal more of this than meets the eye carried on amongst the breeders of successful strains. Personally, I should not hesitate pairing my very best cock bird to his daughter, even were she the very best hen in my room, providing the birds were suitably matched in regard to show points, and were perfectly sound and healthy.

(To be continued.)

NOTES ON THE SCOTCH FANCY CANARY.

By "St. Bride."

The Scotch Fancy Canary is in request this spring, the demand for stock birds far exceeding the supply. The desire is for large birds, which take an upright, well-balanced position on the perch. Moving about as I do among breeders, I find there is a strong disposition to discourage the long, rough-feathered type, and that there is a very decided leaning towards close feathered, trim, tidy exhibits, such as graced our Scotch shows ten to twenty years back; indeed, the judges of that period would have passed by the birds that are now winning. It would, I am sure, be a good thing were our modern judges to do likewise. Why they do not do so is difficult to understand.

Tho Edinburgh fanciers, in practice, aim at reproducing in life the model we all so much admire. The grand old Belgian having gone, with no appearance of returning, fanciers will have to depend upon the Scotch Fancy Canary to supply the properties which the Belgian was depended upon to furnish, and maintain in the cross with the Scotch Fancy Canary. I have had a run through a few aviaries, and could have given particulars of what I saw, but there is a strong aversion to publicity on the part of the owners, the feeling being that such laudation has been overdone.

CHANGE IN SYSTEM OF MATING.

The system of mating the Scotch Fancy Canary of an upright type with a "circle over the perch" style has been exploded. Now it is common to have two of the same type mated, both upright, with a decided throw away of the head, the latter drooping below the direct line from the tip of tho shoulder. Length of neck and body are important factors, but the essential in these non-Belgian days is prominent shoulders. The tail should rest closely on the perch, and the legs should be so set as to give the bird an easy pose, and enable it to move from perch to perch gracefully. In my travels I had the pleasure of handling a cage with a pair mated on the lines I have indicated. Tho cock is an extra upright specimen, with close feathers; the hen much of the same type, but rather looser in feather. She stands fully an inch higher than her mate. The owner, who is one of the foremost breeders in Scotland, expects satisfactory results, and the outcome will be watched with interest. He has a splendid selection, and they are much alike. From four or five pairs he can rear more young birds than some of his colleagues with a dozen pairs.

A BELIEVER IN QUANTITY.

Another fancier who has quality is also a rigid believer in quantity, and enters upon the coming season with over twenty pairs of Scotch Fancy Canaries. No appearance of the Scotch Fancy decaying in that aviary! He is a most enthusiastic fancier, and is determined to come to the front. He has plenty of work before him, but he has no end of grit, and is not slow to apply himself. It is refreshing to pass an hour with him in his room.

A third fancier has four pairs, but they are of superior quality, correct style, and should be well into the honours. He is a great believer in quality—a few good pairs, and well mated, is his motto. Yet another breeder has a first-class team in his breeding cages; his stock has been much in request, and he makes a point of keeping the best, so that for years he has built up an exceptionally fine strain, and he has imported several outsiders, which should strengthen his already strong stock. A fifth friend has excellent stock, descended from the finest strains in the country; he is also moving on the lines of the others already mentioned, and means to produce winners.

Pairing Birds for Breeding.

By J. C. Barnes.

Paper Read before the Members and Friends of the Huddersfield Ornithological Society on February 25th.

Mr. Chairman and Gentlemen,—The backbone of the Fancy, no matter in what locality, is the novice, and it is to him I wish to address myself rather than to the older hands, although my remarks will possibly be of interest to most present. Should any of my statements be contrary to any member's ideas I sincerely hope we shall be no worse friends. My opinions are based on a practical experience covering a good number of years, and not upon theory, so you can depend on what falls from my lips as exactly the method I have pursued with very fair results. My experience has been with the Norwich Plainhead and Yorkshire varieties, so it is to these two most popular, prolific, and beautiful breeds I intend to dwell on, although the "pairing of birds" run very much the same lines in all varieties. Every variety or breed has ideal points which are set before one in the various club standards, and these must be aimed at in breeding show specimens; therefore, two birds paired together should jointly possess the necessary points, as near as possible, of the ideal. The ambition of most fanciers (in fact I might venture to say all) is to be able to breed something worth looking at, so that when the same is placed on the show bench it will not disgrace its breeder, and will be competent to run well in the race for supremacy. Competition creates keenness, therefore no stone should be left unturned if you are desirous of success.

MOST IMPORTANT.

The pairing of birds is the most important item as regards your stock so make it a special study to see that the birds are paired up judiciously. Many fanciers I could mention who have been breeders for a much longer period than one cares to recall, stand to-day just about on the same spot as when they first started; and in fact some of them have even fallen back. The reason of this is that due consideration has not been taken of the weak and strong points of their birds. Study your birds as you do your work, and don't get into your mind that because your birds are of the best of blood all that is required is to place cock and hen together and things will come out serenely. No greater mistake could be made; the thoughtless pairing-up process is responsible for many failures. At no time of the year do I pay such attention to my birds as when the various matrimonial functions take place. Success or non-success depends entirely on how you go about your work in this respect. This fact cannot be impressed too deeply.

DISCARD WEAKLY SPECIMENS.

Never utilise birds that are not of a robust character; should you do so, failure will assuredly follow. No matter how good a bird has been, if it has gone amiss discard same. Don't persuade yourself to trust to providence, thinking it might breed right; ninety-nine times out of the hundred it breeds wrong, and is instrumental in sowing the seeds of destruction. I admit that it takes a fair amount of self control to throw on one side a bird that perhaps has done wonderfully well, say, on the show bench, and to say to one's self, "No, I will not risk you." An effort is required so to act, but such an effort will repay itself in the long run. Set backs have a tendency to occur when least expected, even when healthy stock is utilised, what then can one expect when unhealthy specimens are brought in action? Nothing but utter disaster. Shun birds of a weak nature, and breed with those that possess stamina.

POINTS IN COCKS AND HENS.

In the male birds I like to have size. Substance is in great demand at present, and one must be with the times if one's birds are to be heard of when in competition. Type and quality, which should be the first consideration, appears in a good number of cases to have been neglected somewhat. The rage for size of late years has been such that one often wonders where we shall drift to, especially in the Norwich. However, the times demands size, and size we must have, with as much colour as possible.

The hens I like best of all are those of extra good type and quality, and of medium size. The large hens as a rule lack the neat outline, and are more sluggish in character than their smaller sitters. Medium hens, I am fully convinced, provide the best show birds, and are far better breeders and feeders taken on the whole. Again the medium hens are in nearly all cases of better carriage, and carriage stands for a lot on the show bench. I detest to see a hen loose behind, with inferior flights and drooping tail, and this often is noticed in most of the larger built hens. The latter are all right in their place, for producing stock stuff, but for producing show specimens give me hens of moderate size.

MATCHING UP.

Never pair two birds together that possess the same fault; always try and counteract such failings. For instance, take the Norwich. Should your cock bird have a good head and neck, but is long in body, pair him up to a hen that has a short thick-set body; or if he is deficient in quality of feather, pair him up to a hen that excels in quality. Then in the Yorkshire variety, your cock bird might possess fine length, but run somewhat thin in neck (a general fault with a Yorkie), so pair him up to a hen with as full a neck as you possibly can; or your cock bird might be too much across the perch, when you should pair him to a hen that has extra good position; and so on right along the line.

Strive for the following good points, in the Yorkshire: As much length as possible, erect in position, long flights not crossing at all, closely folded tail of good length, back well filled in, solid breast, tapering body (wedge shaped), length of leg, with plenty of daylight between them, silky texture of feather and nice tone of colour. Avoid as much as possible the following: Thin necks, course heads, frills on breast, crossed wings, droopy tails, shortness of leg, stout waist, and harsh feather.

In the Norwich, have colour by all means (colour nowadays covers a lot of faults), substance, short and thick-set bodies, good broad round heads, deep and expanding chests, short wings and tails, quality of feather, jaunty carriage, legs not over long but well set back, and as much in front and as little behind the perch as possible. Shun the following, which are eyesores to a practical man: Narrow heads, thin necks, long flights and tails, eyes browed, narrow chests, bad feather, stilty legs, sluggish carriage, and long barrelled birds.

DATE TO PAIR UP.

Various are the recommendations given by different fanciers as to the proper time to place birds together for matrimonial purposes. February 14th (St. Valentine's Day) is the old time notion as to the correct date to match up one's stock. This old-fashioned idea, generally speaking, has gone to the wall, and fanciers nowadays pin their faith more to the modern practice of waiting until March is far advanced, or until April has made its debut. My own experience as regards what date to commence operations is that your best guide is the birds themselves oftener than not. I keep my birds back (especially the hens) as long as I can by feeding on plain diet, giving very little stimulating food before middle of March. I like birds to come into breeding form as naturally as possible, and don't believe in forcing matters to an extreme.

Unflighted birds usually come into condition more quickly than older ones, and should I find any of the latter much behind time I assist them somewhat by providing a little egg and bread food, mixing a small quantity of maw seed with it. I like, if at all possible, to have all my birds in trim by about the last week in March, and then, providing the weather is at all of an inviting character, I never hesitate to put birds together. On the whole, nothing is to be gained by pairing up earlier than this, as many fanciers do, oftener than not with disastrous results.

I really favour the last week in March for this simple reason, viz., I endeavour to obtain as many youngsters in the month of April as possible, as I have found out, by long experience and careful observation, that the best birds (both show and stock) are bred in this month. To substantiate my remarks, I will give you a few of my findings.

EARLY BROODS THE MOST VIGOROUS.

In the first place, the parent birds are, as a rule, most vigorous in the early part of the breeding season, therefore producing offspring with the greatest stamina. Again, the hens brood the youngsters better, and don't overheat or sweat with the weather as they are apt to do later on in the season; therefore they rear robust birds. Further, the hens come off the nest much oftener during temperate weather, and are not so lazy as when the heat is upon them: for this reason the young get fed much oftener, and grow much more quickly and strongly. Birds hatched in April, too, have the advantage of more time to develop previous to the moulting season setting in than those hatched later, which is very beneficial to them, and helps greatly in providing strength to battle against the weakening influence, the moult.

Another reason is that April birds fall into the moult while a fair amount of warm weather is still about, and by being thus favoured they come through the same much quicker and better than the later bred birds and are not struggling on, between life and death, possibly into December as many of the later birds are. Other reasons could be mentioned in favour of early youngsters, but the above suffices to satisfy one.

AGE AT WHICH TO PAIR.

The opinions of fanciers vary very much on this point. Some swear by an unflighted cock to a hen a year old or more, others prefer a two-year-old cock and unflighted hen; whereas others favour both cock and hen unflighted. As to my own preference I consider the best results are gained from a two-year-old cock and a young hen (unflighted). Why this method appeals to me is, that a two-year-old cock being more matured than a young cock you get fewer clear eggs from him than you do from the younger one.

Again, it is my firm belief that larger birds are bred by the procedure I favour; also a young hen is more sprightly than her elder sister, and goes about her work in a much better manner, feeding her youngsters oftener, and therefore bringing up more successfully, whereas, if one utilises a young cock (unflighted) he often is immature at the early part of a season, with results from which you can draw your own conclusions.

As regards the hen a year old or more, I don't wish to speak disparagingly, as I don't dislike such, but I wish to convey to you what is my preference as pairs.

UNPRODUCTIVE EGGS.

Unproductive eggs are brought about by more conditions than one, which I will describe. Infertile eggs (clear or bright as they are often styled) are in many cases the result of birds being immature when paired together. In other cases the hen perhaps has got long and very sharp claws, which during the incubation period prick the eggs, destroying what might otherwise have been good. If you take care to cut her nails previously to pairing her up this will not happen, but be careful not to cut into the quick. Again, the beak often is very sharp, and in the turning over of the eggs during incubation penetrates the shell, and brings about a similar state of things. Cut the beak with a sharp pair of scissors should you find it necessary, of course using discretion in doing so. Should your birds possess superfluous feather, cut away around the vent. Further, inspect the nest every morning, and see that the eggs are being set on all the 14 days and are not seven days under the building material as often happens.

Always see (should you make a practice of lighting up your gas at night time) that the hen is nicely settled on her eggs previously to turning the gas out. It is advisable in such cases to partly turn down the gas at first, afterwards turning off all together. If by mischance you shut the hen off her eggs for one night only (that is, if she has been sitting any length of time) you might as well let her start afresh. Damage will have been done that cannot be repaired.

(To be continued.)

Nests of Birds, Poultry, etc., should be regularly sprinkled with KEATING'S POWDER, especially when hens are sitting. Don't forget to do this just previous to the eggs hatching, to destroy the Red Mite. It kills all insects, harmless to everything else. Sold in tins, 3d., 6d., and 1s each.

THE GOLDFINCH, BULLFINCH AND LINNET.

By F. MARWOOD.

A Paper read before the Darlington C.B.S., on March 6th, 1907.

It gives me great pleasure to come before you this evening, and give you my idea of what the above should be to enable them to stand a winning chance on the show bench. The first thing we require in the Goldfinch is a little size, not too much or we may be severely questioned as to its nationality, even though it be a genuine Britisher, but a bird of fair size will always beat the smaller one, this is, if equal in all other points. It should be of good shape, showing a fine curve from the throat right down to the vent. The blaze should be a rich scarlet, extending back behind the eye and running well down the throat; those that are square cut show off to greater advantage. Of course, I do not say that they must all be square cut, for there are good birds with the blaze rounded at the corners. The head should be broad, and of a deep glossy black, running well back, and down the sides of the neck, nearly like a half moon. It, however, should show no tendency to run into the cheeks, which ought to be of a good white, not pure, but with a slight cinnamon tinge if you want to keep on the safe side. Wings and tail should be black, showing good distinct moons, the former to have a rich golden-yellow band running well up into the shoulders. Back, a rich brown; the breast deep chestnut, running off to white. When in proper trim, the Goldfinch is the smartest and proudest of our British Finches—a regular swell.

Now as to their diet; you can safely call hemp seed "life"; it should always play a prominent part in their fare. I have found them thrive best on the following mixture as a staple food—Hemp two parts, teazle two parts, canary one part. You will also do well to give them once or twice a week a spoonful of thistle, dandelion, and knapweed seeds mixed; when they can be got you cannot be too liberal with the seedling heads above, also the milk thistle, or a little watercress. The flowering tops of groundsel I think invaluable, and a little linseed is useful, especially when finishing moult. There is one thing more I might say before closing my remarks about the Goldfinch that is not generally known—when gathering thistle heads, knapweed, and the like, you will occasionally find some infested with a small white maggot: but at this you need not be at all alarmed, as Goldfinches are very fond of them, and they are also very beneficial.

POINTS OF THE BULLFINCH.

The Bullfinch, as a show bird, should, as its name implies, be heavily built, with a deep, broad chest. The whole of the breast should be a bright crimson, running well back on the sides of the neck and down towards the vent, which should be pure white. The extent of crimson varies very much in different specimens, but in order to be in the front rank, a bird cannot show too much. The head and sides of the face (from below the eye round to the back of the head, nearly in the form of a hood) should be a good glossy black. This should not show any tendency to run into the crimson, but be clean-cut. The back should be a good slate grey (running off to pure white on the rump); wings and tail a bright blue-black, the former showing good bars of a very pale grey, almost white. Size is an important point in the Bullfinch, for you have not the same risk to run as with the Goldfinch. With the exception of the Russian and Siberian Goldfinch, there do not seem to be many able to compete successfully with the Britisher.

I think the most suitable seed mixture for this bird is—canary and teazle three parts each, linseed one part, summer rape one part, also a little small white sunflower seed may be given two or three times a week. In spring give sprigs of hawthorn in bud, those of fruit trees are best when they can be procured. They are also fond of dandelion, plantain, chickweed, and knapweed, which should be given liberally when moulting. Give an abundance of privet berries and blackberries.

REGARDING THE BROWN LINNET.

As regards the Brown Linnet, I must again remind you of size, which is an important point with all species of British birds, but, as you are well aware, there is something more than size required in order that you may successfully compete on the show bench. As it is not a bird of striking colours, it must be of good position, standing as erect as possible, on a good pair of legs, and with rather a broad head and good length of neck. I do not care for the thick-bodied, short-necked birds you see sometimes. The wings should be close and compact, showing a good white margin the outer feathers of the tail displaying a good white margin also. The head and back should be a rich nutty brown; breast light brown running off to white at the vent and under the tail; cheeks of a lighter shade, showing a distinct thumb mark; throat light, continuing right down centre of breast, and each side of breast, head, and neck should show a good, distinct black spangling.

The Linnet is the only bird of the three mentioned this evening that can be improved by a little colour food. The seed mixture I think best adapted for the Linnet in confinement is—canary two parts, German rape two parts, and linseed one part. When moulting give a liberal supply of plantain, shepherd's purse, groundsel, etc. The bath, as you will be well aware, is very essential to the well-being of all cage birds, and must not be forgotten, especially when moulting.

NOW READY!

AN ENTIRELY NEW SERIES OF

COLOURED POSTCARDS OF HYBRIDS.

On this Series the following are . . . . beautifully portrayed by Mr. H. Norman:—

(1) Jonque Four-pointed Goldfinch-Canary.
(2) Goldfinch-Bullfinch.
(3) Goldfinch-Redpoll.
(4) Greenfinch-Bullfinch.
(5) Linnet-Bullfinch.
(6) Jonque Dark Goldfinch-Canary.

Price 1d. each.

Post free 6d. the Set.

On Order from any Newsagent, or from

"Cage Birds," 154, FLEET STREET, LONDON, E.C.

The Housing and Treatment of Foreign Birds in Captivity.

By WESLEY T. PAGE, F.Z.S., etc.

(Continued from page 797.)

The Tanagers *(Continued).*

SILVER-THROATED TANAGER (*Calliste icterocephala*).—Adult male: The body colouring is golden yellow, thickly spangled or streaked with black on the upper back and shoulders, upper back washed with green; wings and tail, yellow, with bright green edgings to each feather; there is a black streak starting from the base of the beak and extending to far side of ear coverts; throat and narrow collar round the neck an exquisite silvery blue; remainder of under parts, golden yellow, with greenish reflections on the flanks; beak, blackish; legs and feet, golden brown. Total length, 5 in., tail barely 2 in. Habitat: The mountain valleys in the vicinity of Quito. Mr. W. Goodfellow thus describes one brought to him alive by one of the natives ("Avic Mag.," vol. vi.):—"It was in perfect condition, but for the primaries, which had been plucked from the wings. Although the Indian stated it was but just caught, it seemed most confiding, and did not struggle in the hands in the least. I kept this bird during the two months of my stay there. It took great delight in hopping about the room, and made itself thoroughly at home at once. It bathed regularly, and also sang a little, with a gentle, subdued voice, chiefly in the early morning; and when so engaged would always sit on the bottom of the cage in one corner. I fed it on bananas, with an occasional cockroach, which it readily took from the fingers. One day one of the bamboo bars fell out of place when the cage was hanging outside the hut, and so my Tanager escaped. I found this such an attractive bird, and always so contented, that I hope it may be my lot some day to possess one of these birds alive in England, where, if they were known, they would be great favourites."

NEW GRENADIAN RUFOUS-HEADED TANAGER (*Calliste vitriolina*).—Adult male: Forehead, rufous; crown and nape, orange rufous; eye region and ear coverts, black; upper parts, and sides of neck and breast, greenish; under parts, greyish-green, slightly whitish on sides and flanks; wings, black, with outer webs broadly margined with bright green; tail, black edged with green; beak, legs, and feet, blackish. Total length 5¼ in., tail 2¼ in. Habitat: Mountain valleys of New Grenada.

LESSER AND GREATER RUFOUS-HEADED TANAGERS (1) (*Lesser*) *Calliste cayana* (2) (*Greater*) *Calliste cayanolœma*.—(1) Adult male: Top of head, rufous-ochraceous; facial patch round eyes and over ear coverts, black; neck, lower back, sides, sides of breast, region of vent, golden ochraceous,; back and rump, greenish; wings and tail, black, broadly margined on outer webs, with brilliant bluish-green; larger wing feathers have ends and inner webs margined with brown; throat and breast, lilacine; remainder of under parts, greyish lilacine; beak, blackish; legs and feet, greyish brown. Total length 4¾ in., tail 1½ in. Habitat: British Guiana, and region. (2) It is somewhat doubtful if this bird is really entitled to specific distinction. It is slightly larger than *cayana*, and its colours are purer and richer, especially the grey-blue or lilacine of the throat.

CHESTNUT-CAPPED TANAGER (*Calliste cucullata*).—Not quite so brilliant as some of its congeners, but, nevertheless, a richly-coloured and handsome species. Adult male: Above, ochraceous washed greenish; top of head, dark cinnamon-chestnut; ear coverts, black; upper tail coverts, rich bluish-green; wings and tail black, broadly edged with bluish-green; under parts, bluish-ochraceous, slightly rufous at vent; beak, dark horn; legs and feet, blackish. Total length 5¼ in., tail 2 in. Habitat: Venezuela.

THE YELLOW TANAGER (*Calliste flava*).—A brilliant and showy species, ranging over Eastern Brazil; sexes dissimilar in plumage. Adult male: Upper parts, bright tawny-yellow; lores, sides of face, chin, throat, breast, and middle of abdomen, black; remainder of under surface tawny-yellow; wing and tail black, edged with bluish-green; beak, legs and feet, blackish. Total length 5¾ in., tail 2¼ in. Adult female: Top of head, neck, sides and vent, tawny-yellow; base of neck to middle of back, greenish; wings and tail, as male; lores, sides of face, chin, throat, breast, and middle of abdomen, greyish-ochraceous; thickly streaked with blackish on throat, breast, and sides of face.

CHESTNUT-BACKED TANAGER (*Calliste pretiosa*).—A most beautiful species, even more so than the now well-known specimen of Mr. Townsend's *C. melanonota*. Habitat: Southern Brazil. Adult male: Head and neck to middle of back, rich coppery-chestnut, with a golden sheen on the crown and ear coverts; lower back and wing coverts, rich ochraceous tinged with green; wings and tail, black edged with bluish; under parts, grass green, merging into bluish green at lower abdomen; vent, chestnut; beak, legs and feet, brownish-black. Total length 6¼ in., tail 2¼ in. Adult female: Distinct from male. Upper parts, dark green, suffused with chestnut on the head, neck, and upper back; wings and tail, black, edged with green; under parts, paler green; middle of abdomen, whitish; vent, rufous.

BLACK-HEADED TANAGER (*Calliste melanonota*). — This beautiful species has become well known to Londoners by Mr. Townsend's fine male, which has appeared at all principal shows during the past two years; and, more recently, he has exhibited an equally fine female. Must be allowed as much ripe fruit as it will eat, also spiders, mealworms, etc. Note: Many Tanagers that will not touch full-grown mealworms, will eat readily small ones. Adult male: Head and neck, rich coppery-chestnut; upper back, black; wing coverts and lower back, whitish-ochraceous; wings and tail, blackish, with broad outer margins of blue; under parts, shining green; vent, chestnut; beak, legs, and feet, brownish-black. Total length 5¾ in., tail 2¼ in. Adult female: Upper parts, green, suffused with coppery-chestnut on the head and neck, and brownish on the upper back; wings and tail, blackish, edged with green; under parts, paler green; middle of abdomen, vent, and under tail coverts, pale buffish-chestnut.

BLUE-WINGED TANAGER (*Calliste cyanoptera*).—Adult male: Head, neck, sides of face, chin, throat, and upper breast, black, with violaceous reflections; wings and tail, deep bluish-black, edged with blue; remainder of upper and under parts, golden straw colour, suffused with light green on sides of breast and lower back; upper tail coverts, light green; beak, black; legs and feet, brownish-black. Total length 5½ in., tail 2 in. Habitat: Venezuela. In general appearance this species closely resembles the Sugar Birds (*Dacnis*) but is larger and slightly stouter.

BUFFON'S GREEN TANAGER (*Calliste gyrola*).—This beautiful species, which is rather common in British Guiana and neighbourhood, is met with singly and in pairs, and feeds on fruit and insects. Adult male: General body colouring, shining grass-green; middle of abdomen, bright blue; thighs, ruddy chestnut; head and neck, rich chestnut, banded narrowly at the nape with golden; bend of wing, golden; wings and tail, blackish broadly margined with bright green; beak, legs and feet, dark brown. Total length, 4¾in.; tail, 1¾in. Female: Similar, but colours less intense. This fine species may be distinguished from its similarly plumaged allies by the golden patch on bend of wing.

BLUE-BACKED GREEN TANAGER (*Calliste gyroloides*).—Very similar to *gyrola*, from which it may be distingnished by its blue rump. Head, sides of face and nape, rufous; narrow band of golden yellow round back of neck; the rump and under parts are bright blue; vent, green; thighs, rufous, remainder of plumage, shining grass-green. Total length 5¼in., tail 2¼in. Female: Similar, but duller. Mr. Bridges found this species near David in Veragua; it frequented high trees, and fed on the fruit of a small fruited ficus.

DESMAREST'S GREEN TANAGER (*Calliste desmaresti*).—This is very similar to the two preceding species, being rich shining grass-green, with head of rich glossy chestnut. It may be distinguished from the two preceding species by the entire absence of blue on the under parts. Habitat: Northern Venezuela and Trinidad.

BRAZILIAN (*Calliste brasiliensis*), GUIANAN (*C. flaviventris*), VIELLOTS' (*C. vieloti*), and BOLIVIAN (*C. boliviana*) TURQUOISE TANAGERS.—These four species all bear a striking resemblance to one another and appear more like local races than distinctive species. In all of them the female is similar, but their plumage is less refulgent than that of the male.

C. brasiliensis: Forehead and fore-crown, sides of face, sides of neck, throat, chest and breast, wing coverts, margins of primaries, rump and upper tail coverts, bright blue; remainder of upper parts, black; below, the sides and flanks are barred with black; middle of abdomen and vent, white; beak, blackish; legs and feet, dark brown. Total length 6in., tail 2¾in. Habitat: S.E. Brazil.

C. flaviventris: Upper parts, black; fore-crown, sides of head, margins of larger wing coverts and rump, bright blue; lesser wing coverts, bright turquoise-blue; outer margins of primaries, peacock-blue; throat and lower breast, bright blue; breast, black, flecked with bright blue; flanks, blue, marked with black; middle of abdomen and vent, pale sulphur-yellow; beak, black; legs and feet, blackish. Total length 5⅞in., tail 1¾in. Habitat: British Guiana, Venezuela, and Trinidad.

C. vielloti: Similar to *flaviventris*, except that the middle of abdomen and vent is sulphur-yellow. Habitat: Same range as *flaviventris*, but apparently most plentiful in Trinidad.

C. boliviana: similar to *flaviventris*, but the middle of abdomen bright sulphur-yellow. Habitat: Colombia, Bolivia, and Amazon region.

Prince Maximilian met *brasiliensis* in Eastern Brazil, in the more open country. He found the nest in a thick bush, built in a fork formed by the separation of four branches; it was of a true chaffinch type. It was constructed very neatly of wool, mostly white, intermingled with a few rootlets, moss and bark, and lined internally with broad threads of bark. It contained two eggs, longish in shape, white, marbled with pale reddish-violet, and varied with a few irregular black specks and blotches. There is at present exhibited at the London Zoological Gardens a specimen, presented by Mr. E. W. Harper, as *C. flaviventris*. This appears to me to be *brasiliensis*, as it entirely lacks yellow on the abdomen and vent, being pure white on these parts. It is a beautiful, vivacious and fearless bird; however, the same may be said for each of this quartette, judging from skins and figures.

(To be continued.)

Forsten's Lorikeet.

A well-known winning Foreign Bird, the property of Mr. G. McWILLIAMS (Carlisle).

THE GOULDIAN FINCH.

As Seen in its Native Wilds.

(Continued from page 262.)

Before trapping the birds we had to make all the cages, and this is the reason why we took wire netting with us. As we have only half-ton of seed with us, we can only take a certain number of birds, as it has to last us till we get back. After we have filled our cages, we make tracks for Townsville, but we return over a different route. We go via Esmeralda, cross over the River Flinders, and follow the river until we come to the Township of Hughenden.

Here we are again in civilisation. We have still 270 miles to go before we come to our starting place, which we reach by passing through Bett's Creek, Homestead, Balf's Creek, Charter's Towers, and on to Townsville. Of course, there are many more smaller places, too numerous to mention. Our horses were very poor when we got back. After carting 100 doz. birds all this distance, we had only 60 lbs. of seed left, but there was plenty more in the store. The birds were then shipped to Sydney, New South Wales, and disposed of to the dealers, and eventually a lot of them reached Europe.

Having given our adventures during a bird-trapping expedition, we will now describe

HOW WE CATCH THE BIRDS.

We start out from the depot with the usual equipment (as mentioned in another part), and make a journey to the nearest water hole. One man is left at the depot to prepare for the birds that are brought back to him. On finding a suitablo water hole, possibly 50 miles from our starting place, we dig a trench from the banks of the water, and let the water run into this. Our nets are then set one each side of the trench, and the natives are stationed all round the water to frighten the birds off as they come to drink, which, by the way, is in the early morning and again in the afternoon. They soon find out, however, that they can get an undisturbed drink at one place in the trench, and there a number of them go. They are driven off several times until they come in larger numbers. When a sufficient number has come to drink the line is pulled, and the nets come over like the leaves of a book and the birds are underneath. Of course, the man who is manipulating the net line is concealed, about 25 or 30 yards away. Sometimes we work two nets, one each end of the water. At times the water is so large that it would take 300 or 400 natives to surround it, and as this is out of the question we stake the water round with paper flags. If there is the least bit of wind these flags flutter about, and so frighten the birds off. In trapping birds we have a lot of trouble with hawks. Sometimes they are so daring that they will actually try to take the birds from the nets.

We have caught as many as 274 birds in one net, and with one pull of the line. Birds were very plentiful that morning. On that occasion we filled no less than ten cages (or 1,200 birds) in three hours. This will open the eyes of bird trappers in England.

No doubt the reader will think that the birds ought to be cheaper when caught in numbers like this, but bear in mind what an expedition like this costs, the risks and privations that have to be borne. When in this district we can only work until 10 o'clock in the morning and after 4 o'clock in the afternoon. Between these hours it might be 115 degrees *in the shade*. This will give you an idea what the heat is like. We have known it so hot that the lagoons have dried up, and perhaps we have about two gallons of water left to last us 50 miles. It is very hard times when there is no water to be obtained, and perhaps the food run short. On one occasion we lived on kangaroo flesh for three months, and often have we had to get water to drink from a lagoon wherein lies a dead kangaroo or dingo. The mosquitoes and flies are great tormentors, and to protect our eyes we have to wear goggles. But it is terrible to see the horses, they can do nothing to protect themselves. This is during the day time. At night we have to put up with the squalls of the water fowl, night birds, and, worst of all, the ants.

Our trapping operations take place soon after the breeding season, and quite 75 per cent. of our captures are uncoloured, or, in other words, have only their nest feathers, and when in this condition they look a miserable lot of birds. All these are moulted off in the cages, and by the time we arrive in Europe they are in perfect feather.

The trapping goes on until we have a sufficient number, and then we return to the depot, hand over our captures to the man left in charge, and have a day or two for rest. After that we load up again with fresh cages and provisions, and start off again in another direction. If the previous season has been a wet one birds are sure to be plentiful. We keep this trapping up until we have sufficient birds, then we turn our attention to the kangaroo "department."

ORDER YOUR 1907 ANNUAL AT ONCE

My Aviary and its Construction.

By W. Roslyn.

A Few Reminiscences of Forty Years in the Fancy, by the President of the Mansfield C.B.C.

(Continued from page 185).

My reminiscences as a fancier extend now over a period of 40 years. Long before I left school I was an ardent fancier of the sober-coloured Linnet, and when the parental sanction was given for me to have a corner of a spare room, and my mother made me a present of a fine large cage with twelve divisions, to put in the corner, there seemed little left on earth for me to wish for.

It was not, however, until the summer of 1877 that I had the courage to put birds on the show bench. I was then resident in Leicester, and seeing a show advertised to be held in connection with a local flower show, I entered two clear yellow Norwich cocks, and in my own mind was quite certain I should win; but, alas, the judge held very different views on the subject, and I went cardless!

This show was answerable for a great deal that followed, for my meeting with some old fanciers there led to the formation of the Leicester and Leicestershire Ornithological Society, of which I was elected secretary, a post I held for five or six years. We held a show the following Christmas, and probably the proudest moment in my life was when I saw that I was first in clear Yellows and ditto in Buffs, which, together with some minor cards in Cinnamons and first in British, made me the happy winner of the special for most points in the show. Like many more beginners, I was so full of conceit at this success that I thought I must win in open competition, and so sent entries here, there and everywhere, but I soon found that the catalogues were filled with the names of men who were easily able to make my most cherished specimens look common.

Ah! how the list of names has changed. Where are now the names of Bemrose and Orme of Derby, Moore and Wynn (Northampton), Robinson (Maryport), Shilton and Gadd, and the brothers Audley (Leicester), Adams and Athersuch (Coventry), Mr. C. J. Salt (Burton-on-Trent)—some of whose stock of Norwich I bought—Mr. Arthur Lewis (Nottingham), and many others whom space will not permit of mention?

Many of these have, alas!, passed to the Great Beyond. May their ashes rest in peace! But some are still with us. Have they forsaken their old love, and why? Our old friend, Mr. Joseph Bexson was then in the fighting line, and a hard fighter he was, too.

Time passed on, and I stuck to my Norwich and Cinnamons, with varying success, like all other fanciers, having my good years and bad ones, until the year 1886.

At the beginning of that year, one of our old travellers retired, and I was dispatched to London to take up the work at that end. This was a change indeed for me. I, who had been such a home-lover, must leave my birds to the care of my wife, who has been my greatest help in THE hobby, and who is, even now, in the autumn of our lives, as keen for a show as ever.

I soon found that I could not hope to keep showing, as I was frequently away for a journey of seven weeks, and I had to be content with a cut in now and then with one bird, a bare-eyed Cockatoo, with which I managed to score at Balham; also first two years in succession at the Royal Aquarium, and third at the Palace, I think in 1888.

This wandering life, however, had its advantages, for it brought me in touch with many fanciers in different parts of the country. Thus, one week I would be looking over the tremendous stocks in Norwich with Mr. Jacob Mackley or Mr. J. Yallop, or having a chat with Mr. Fred. Fitt, whose love of the Crest amounted almost to a craze. The next week would probably find me deep in the merits of a Cinnamon as held forth by that most enthusiastic fancier, Mr. Harry Tams, of Longton.

Whenever and wherever I found I had an hour to spare I would make inquiries as to the whereabouts of fanciers, and there was always a cheery welcome, and a hearty handshake at parting, with an invitation to "come again."

Many friends were made, many scenes witnessed, some pleasant, some expressibly sad, as in cases of illness or want of employment. Sometimes I would find that since my last visit, work had failed, and to the great regret of the fancier, the birds had had to be disposed of, or bread would be lacking for the little ones, and I shall not easily forget the dejected look of a once prosperous mechanic whom the dreaded consumption had laid low, when he said, "Aye, master, I shall ne'er get o'er it, I'd sooner hae parted wi' owt than them theer birds."

Nearly ten years of this wandering, and then a manager was a necessity at our increasing business at Mansfield, Notts. This brought me to an anchor, and after getting settled down again, my thoughts turned again to the show bench; but my fancy had undergone a change, and I cleared out my stock of Norwich and Cinnamons, and confined my attention to British and Foreign birds, to which I still cling.. I exhibit pretty freely, and have no reason to complain about success.

The young fanciers of to-day cannot, and never will, realise the difficulties of the past generation of fanciers.

Remember, my young friends, we had no paper devoted to cage birds. All the information which was printed I eagerly devoured, but it was very scanty, and some of it was the most pitiful drivel, and was evidently written by men who were journalists, but not fanciers, and who only proved their ignorance of the subject by dilating upon it.

We got a few short paragraphs in the "Journal of Horticulture" first, and then afterwards came the "Fanciers' Gazette," in which we got a good deal about Shorthorns and dogs, and a little about birds. How eagerly I used to look forward for the issue of that sheet when Mr. W. A. Blakston began to write for it, and his articles were read and re-read until I knew them off by heart.

I paid a noted exhibitor of that day a pretty heavy fee to teach me how to wash birds for exhibition, but I should not dream of using the same methods in these days, and bear in mind that whatever you learned in those days you had most distinctly to pay for. Societies were few, and people with a real practical knowledge of the wants of the young beginner, and the ability to express themselves in an intelligible manner were even fewer still.

Before I close this imperfect account of my experiences, let me impress on the young fancier who wishes for success on the show bench this motto:—"Fight, fight hard, fight fair; never give points to your opponents, but never take a mean advantage." So shall your victories be victories indeed, and when you sit by the fireside towards the close of your lives and review in your minds the fights of the past, and look on the trophies won, no bitterness shall enter into the view because of the consciousness that on your side at least the fight was fair and the battle honestly contested.

MICE

IN THE BIRD ROOM.

Rats, Mice, Field Mice, &c.,

EXTERMINATED BY DANYSZ VIRUS

Discovered and Prepared by
Dr. DANYSZ of the Pasteur Institute, Paris.

When affected with the Virus the Vermin leave their usual haunts and die in the open. The remedy is harmless to other animals and human beings and may be used everywhere with absolute safety.

For MICE only, 1/- per tube.
RATS & MICE, 2/6 ,,

52, Leadenhall St., London, E.C.

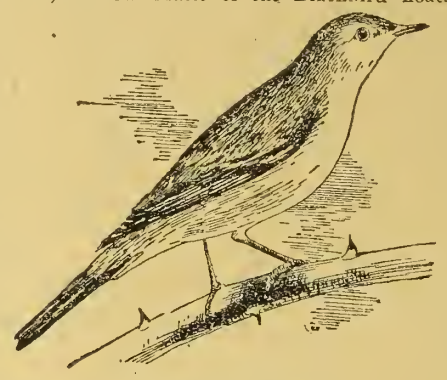
WILD BIRD LIFE

All communications for this column should be written on one side of the paper only, duly authenticated with the name and address of the writer, not necessarily for publication, and sent to H. Norman, Editor, "Wild Bird Life," "Eastcote," Alma Road, Carshalton, Surrey, by Monday in each week. Original observations and records invited.

The Chiff-chaff and the Willow Warbler.

Spring is coming. The pale primrose is peeping out among the rich green leaves and tender mosses of the hedge banks and sheltered woods. It is good to be in the country, for there is a life and vigour in the breeze, and warmth in the sunshine prophetic of joys to come. From the downs there is a glorious view of rich woodland and meadow, stretching away to the heart of the country, and already the woods have lost some of the dullness of winter colouring. There is a fullness, and a touch of colour in the dense mass of branches and twigs that tells of the swelling of buds and thickening of tender shoots, and soon we shall have a rush of vernal pleasures crowding upon us.

Birdland is full of joy and gladness; the slow, mellow music of the Blackbird floats



THE CHIFF-CHAFF.

across the meadow on the soft breeze, and the cheerful notes of the Song Thrush can be heard in the very centre of the village, and overhead the Skylark gives us of his best. On some fine day when we wander by the side of a plantation or along the edge of the wood, we shall hear the first notes of the Chiffchaff; his two-note song will sound pleasantly to us—he is the first harbinger of that great orchestra of feathered musicians soon to reach our shores. Although our resident birds are at all times a source of interest to us, it is the Warblers, Chats and Pipits that engross our attention during the early spring months. The Chiffchaff is a tiny mite of a bird, and there appears no reason whatever why he should brave our fitful climate earlier than his congeners, the Willow and Wood Wren. He is due about the 20th of this month, for he comes with the hardy Wheatear, whose white tail patch will soon be conspicuous along the sheltered walls by the sea marshes, and at the foot of the downs, where he will possibly rest awhile until some favourable wind carries him with his companions inland.

It is difficult at all times to distinguish the three tiny Warblers mentioned above. To the ordinary observer their slender, olive green bodies, clambering, mouse-like ways, long, thin legs and pale yellow eye stripes, make them quite alike, and so near is this resemblance that experienced naturalists cannot always name them at sight. To do so, or even to hazard an opinion, one must become perfectly familiar with all three species. The brighter colour and fluttering play of the long wings of the Wood Warbler will aid us to name him, but the Chiffchaff and Willow Wren are quite another matter. They both love shady woods and well sheltered plantations where the branches and rank grass grow luxuriantly by some woodland streams, affording plenty of cover for the cosy, down-like nests, for even in building they resemble each other. The eggs are nearly alike; they have the same light ground colour, but the markings upon those which belong to the Chiffchaff are almost black, whereas the others are purplish-red.

These birds lack the steady perching habit of the majority of Warblers; they are generally observed in a stooping attitude, flitting from branch to branch, or clambering up a twig, to peer under some overhanging leaves for a spider or small caterpillar. It is generally among the branches of some full grown tree that we must look for these engaging birds. The Willow Wren will spend some time in a single tree, passing from branch to branch, carefully searching every leaf, stopping occasionally to warble his pretty song, so unlike that of any other bird. It commences on a high pitched note, descends the scale, and dies away almost to a whisper. This curious little warble he repeats time after time, while one can stand below the tree and watch his every action, for he is careless of observation.

The Chiffchaff is less patient; it is only a fleeting glance that we get of his slender body; he much prefers to have a screen of dense branches or fluttering leaves between himself and us, and being at all time less numerous than the Willow Wren, he is not often seen, although his two-note song, so clearly resembling his name, is frequently heard, and just now is listened for with eagerness by all lovers of wild birds, and countryside pleasures.

Notes and Queries.

An Early Bird.

It is reported that the Cuckoo has been heard in Cornwall.

The Bittern in England.

The last nest of the Bittern recorded in England was in 1868. They have no opportunity of nesting now, for the birds are destroyed directly they arrive.

Birds in the North.

I was much surprised to note the great difference in the doings of birds in the North of England, as gleaned from the diary of a naturalist. All of them are much later in commencing to sing, also in pairing and nesting. Such being the case, we can only surmise that in the North there cannot be quite so many young ones reared. Consequently, bird life during the late autumn months is not so plentiful as it is here in the South.

The Busy Rookery.

The Rooks have not yet finished nest building, for they may be seen daily carrying twigs to the nesting trees. Although Rooks often fly with the wind they never settle with the wind behind them. They gracefully fly past the trees, sweep round elegantly and then return. At first sight this appears to be unnecessary exertion; one would think it quite an easy matter for them to fly straight to the trees and settle. Of course, there is the possibility that the wind would carry them further onwards, even if they clutched the branch with their feet, but I think the true explanation is that Rooks, like other birds, very much dislike to have their feathers ruffled. This would, of course, happen if they stopped suddenly in flight going with the wind.

Blackbird with White Head.

Last Sunday I saw a cock Blackbird with a pure white head in Branksome Park. Is this often seen?—C. FRANK HAYMAN (Parkstone).

Black Redstart in Devon.

The Black Redstart has been seen in Devonshire, and there is no doubt these birds visit us every winter. In this case the bird was seen by a lady, who thought it was the ordinary Redstart, but darker in plumage. In manner and habit of flicking the tail they are very much alike.

A Note on Sparrow Clubs.

Sparrow clubs for the destruction of the bird are still in existence, and many fresh ones have been started in new districts. No doubt House Sparrows are very destructive, and need thinning down, but, unfortunately, many other species suffer through the ignorance of the destroyers. A few lessons upon oology, with specimens of eggs, would save much needless destruction of bird life.

Birds in the Orchard.

Although fruit trees are generally planted in straight rows, each a certain distance from its neighbour, a number of well-known birds build in their branches. Many of the trees have thick, knotty lumps upon the limbs, and a nest is often mistaken for one of them, and so escapes detection. All the Finches frequently build in the orchard and occasionally the long-tailed Tits, the Woodpecker and Nuthatch, especially where the trees are old, and even the Magpie, Crow and Pigeon and, of course, the Thrush and Blackbird. One may occasionally come across something quite out of the common among orchard trees.

FOREIGN BIRDS—continued.

To breed Budgerigars successfully you must have the **"Improved Secure" husks.** All bird fancying papers have advised their readers to prefer them, because other kinds come to pieces and the young birds fall to the floor and die and this is just why the **"Improved Secure" husks** have been **"celebrated"** for the last 16 years. They remain unequalled, competition and comparison always increase their popularity; the principal Zoo's, Parks, and breeders employ them, and "Cage Birds" has said:—"They are far superior to the old husks," so beware of worthless substitutes. Price **4/6** dozen, smaller quantities **5d.** each. Pamphlet, entitled "Budgerigar Breeding," post free on application. Read it before buying husks. Superior box nests for Cockatiels etc., **1/6** each.

HARPER, Upper Villiers Street, WOLVERHAMPTON.

BOOKLET FREE.

FINEST Talking Parrots. I only deal in Parrots that will make first-class talkers; no rubbish. I am willing at all times to send my Parrots on four weeks' trial and three months' talking guarantee. Why? Because all my Parrots are young, strong, and reliable. My lifetime has been spent among grey Parrots, both at home and abroad. I guarantee every customer every satisfaction. Grey Parrots are my special fancy. I have trained them, know their wants, and can give every purchaser a bird that will please him in every way. I can supply grey talkers, not thinkers, that will say almost anything, at reasonable prices. Before you purchase a grey or green Parrot, send for my Booklet, entitled "Talking Parrots." All my birds are sent on four weeks' trial, at my risk. Send postcard for catalogue.—Mrs. Forster, Princes Park Aviaries, Violet Street, Liverpool.

BLACK, IMPORTER,

Palace Aviaries, Sunderland.—Nuns, Spicebirds, Weavers, Cutthroats, Silverbills, Combassous, etc., 2/6 pair; Cordon Bleus, Firefinches, Tigerfinches, etc., 3/6 pair; grey and green singing Finches, 2/6 each; Red-crested Cardinals, in full song, 7/6 each; Whydahs, 4/- pair; breeding Budgerigars, 5/6 pair; Cockatiels, 10/6 pair; Amazou and Grey Parrots, 20/- each; Avadavats, 2/- pair; Atlasfinches, 4/6 pair; Doves, 2/- pair; fish, mice, rats, etc.; send for list, stamp; trade supplied.

DALEY.

African baby Grey Parrots, full feathered, 20/- each, cage complete, 24/-; rough baby Grey Parrots, 15/-; acclimatised African Grey Parrots, 30/- each, with cage complete, 34/-; young Blue-fronted Amazons, in good health, feather, and condition, 25/- each; three Double-fronted Amazons, 50/- each; Bared-eyed Cockatoos, 50/- each; talking African Grey Parots, £3 10/-, £4 10/-, £6, and £8; talking Amazons, 50/-, 70/-, and 100/- each; Rose-breasted Cockatoos, 10/6 each; Cockatiels, 12/6 pair; Budgerigars, green, 7/6 pair; yellow Budgerigars, 16/-; indestructible Parrot cages, 4/-, 6/6, 8/6 10/6, 15/-, and 25/- each; satisfaction and safe delivery guaranteed.

Daley, Tithebarn Street, Liverpool.

PARROT LOVERS

Should send post-card immediately for our new enlarged book entitled "Parrot Prattle" (registered copyright, infringers and imitators will be proceeded against). This book contains 120 pages of very interesting facts, and gives valuable advice and hints to all parrot buyers. Full details of our original system of selling Parrots on four week's trial, at our risk, which we were the first to introduce. We sell Parrots of all descriptions on four weeks' trial, at our risk, before settlement. Cheapest and best in the Kingdom, and any Parrot sold by us, and not giving full satisfaction, will be exchanged any time within twelve months. Remember we lead and others try to follow. Write to other dealers as well as us, and judge for yourselves. Lists of Parrots for sale and above book post free on receipt of postcard.

PARROT AVIARIES, MORECAMBE.

JOHN D. HAMLYN

221, ST. GEORGE'S ST., LONDON DOCKS.

Arrivals week ending March 16th inst.

1 Male good-sized Chimpanzee; 5 different Monkeys; 22 Grey Parrots; 1 Sea Eagle; all above direct from the Congo; 22 Indian Rhesus Monkeys; 1 Bonnet; 19 Marmosets; 220 Saffron Finches; 2 Pileated; 5 Blue Wings; 22 White Throats; 5 Hen Virginian Cardinals; 4 Zebra Finches; 2 Californian Quail; 4 Maximilian Toucans; 16 Red Rosellas; 4 Red Vented Bulbuls; 2 Brazilian Bullfinches; 1 White-eyed Thrush; 2 Blackbirds; 2 Thrushes; 8 Brazilian Teal.

The Question of being the largest importer of Foreign Birds (Canaries not included) can easily be determined by paying a visit to the respective advertisers, and judging who are really importers and who are not.

I only advertise what is actually kept in stock

BUDGERIGARS. Genuine imported Australian Birds, a good opportunity to acquire fresh blood, 5/6 for adult hen and cock. ZOO, 18, Fleshmarket Close, EDINBURGH.

JOHN GARLAND

wants. Good health. I thank three old fanciers who sent their birds to me without the money, as I have not sold birds for five years; but I intend to end my days with them, as I think it a pleasure to sit and smoke and hear them sing. For thirty years I have been a general commission agent in Smithfield. I am better known than any man in the Midland Counties. I am known by all leading men in the Fancy in this town, so you will know what to do at any time that you have birds to part with, send a post card. Just a few words to young fanciers: Never part with your goods unless you know where you are sending to. I have been many miles to get these bargains, and when I got to most of these places they have had nothing. Deposit system for your life. My bank is Metropolitan Market Branch. Keep this in your mind.

64, Bordesley, Birmingham.

ALWAYS USE OUR

DEPOSIT SYSTEM.

We are not responsible for the statements made in advertisements, nor for the *bona-fides* of either buyers or sellers. In all transactions the adoption of our Deposit System should be insisted upon.

IMPORTANT.

SEND THE FULL COMMISSION.—If the full commission does not accompany the deposit, the vendor will not be notified of its receipt until the amount deficient, plus the extra postage incurred, has been paid to us.

HOW TO REMIT.—Under no circumstances will Cheques or Post-dated Money Orders be accepted as deposits. Uncrossed Postal Orders must be sent and the numbers taken for safety.

RULES.

1.—PROCEDURE.—The intending purchaser should send to this office the amount of the purchase (our deposit fee included), and at the same time he should communicate with the seller, stating what it is he requires sent on approval. We acknowledge receipt of the deposit to both parties. In all cases the depositor should give his name and address, and also that of the vendor, and must write same clearly and distinctly.

2.—END OF TRANSACTION.—The deposit is retained by us until we hear from *both* parties that the transaction has been completed. If a sale has been effected, we hand the amount deposited to the seller. If a sale has *not* been effected, we return the amount to the depositor. The transaction must be conducted by the parties themselves. We merely hold the deposit.

3.—AMOUNT OF COMMISSION.—The fee is 6d. for each £1, or fraction of £1, and it must be sent at same time as the deposit.

4.—IMPORTANT POINTS.—The depositor must decide within forty-eight hours of the receipt of the goods whether he will keep or return the same, unless, that is, some other period of approval (of which we must be advised) is agreed upon by both parties. The depositor must at the same time notify us of the fact that he has returned the goods. If the goods are not returned within the said forty-eight hours, we reserve the right to send the deposit to the seller after the expiration of that period. And should the seller fail within three days to notify us of the receipt of his goods back again, the transaction will be treated as ended, and the deposit be returned to the depositor.

5.—A SATISFACTORY PURCHASE.—When a transaction has been completed to the satisfaction of both depositor and seller, both parties must at once return the deposit receipts as a guarantee of its completion. The depositor must at the same time instruct us to pay over the deposit to the seller.

6.—GOODS ALREADY SOLD.—If the goods are sold before our deposit note reaches the seller, or, if for any other reason he declines to do business, he must at once return the deposit note to us. Failing its receipt, we reserve the right to return the deposit to the sender after the expiration of three days.

7.—FRESH TRANSACTION.—In case no sale be effected, a deposit is available for purposes of a fresh transaction, provided another deposit fee be paid.

8.—GOODS IN TRANSIT.—Goods in transit are at the seller's risk, and any damage or loss sustained on the journey must be borne by the seller. But goods not approved of must be properly packed and returned by the same means as were used in sending the same.

9.—PAYMENT OF CARRIAGE.—The payment of carriage must be a matter for arrangement between the vendor and depositor. We do not undertake to settle disputes affecting questions of carriage. But in the absence of other arrangements the purchaser is liable for the carriage of the goods, and if the goods are sent on approval and returned, each party pays the carriage one way.

10.—DISPUTES.—In case of a dispute, the decision of the Editor is final.

PREPAID ADVERTISEMENTS

UNDISPLAYED.—Three Words a Penny up to eighteen words, MINIMUM Fourpence. One Half-penny per Word for each word over eighteen.

IMPORTANT NOTE.—Two or more Advertisements coming from the same advertiser, even if sent in different names, are reckoned together and counted as one Advertisement.

Headlines or Footlines 6d., 9d., 1/-, 1/6, according to size.

Postal Orders must be sent as far as possible. All moneys should be made payable to F. CARL. Advertisements close Tuesdays first post in each week, and should be sent to the Advertisement Manager, CAGE BIRDS, 154, Fleet Street, London. Terms for Display Advertisements on application.

PATENT SAFETY SHOW CAGES.

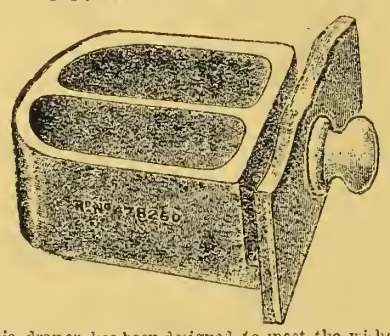
Send stamp for particulars of our patent safety show cages and improved breeders, recommended by Mr. Robson.—Midland Cage Works, 78, Dame Agnes-st., Nottingham.

PARR'S POTTERY

NEST PANS, DRINKERS, FOUNTAINS, BATHS (Oval, Round and Square).

"Duplex"

Cut Partition Drawer.



This drawer has been designed to meet the wishes of Breeders so the foods can be separated instead of mixing together. Thus having one drawer instead of two. Made in two sizes.

Mr. C. A. House, Claude St. John and J. North all say it is a good idea.

Wire door falls into the groove and is not in contact with food.

THE HYGIENE OF BIRD KEEPING.
By W. GEO. CRESWELL, M.D., L.R.C.P., F.Z.S.
Price 1/1, post free from CAGE BIRDS Offices,
154, FLEET STREET, LONDON, E.C.
OPINIONS OF THE PRESS.
LANCET: "This little book will be welcomed by all lovers of birds, whether ornithologists, aviculturists, or the owners of a single pet songster. The author deals with his subject in a thoroughly practical and scientific manner, and the results of his experiments prove the fallacy of some rule-of-thumb theories. . . . The book is well illustrated."
COUNTRY LIFE: ". . . a surprising amount of really valuable advice for all who keep small birds, whether in cages or aviaries. . . . Those who approach the subject with an open mind must admit the cogency of the author's arguments; and these, backed by a very wide experience at first hand, will prove hard nuts to crack for many of the champions of the 'good old methods.' . . . We venture to think that his experience will pave the way for a revolution in the methods of bird keeping in the near future."

"A READY AID TO DISTINGUISH THE COMMONER WILD BIRDS OF GREAT BRITAIN."
New and Cheaper Edition.
Pocket Size. **Limp Cloth.**
From Early Press Notices.—"A very practical and useful little work, systematically arranged."
"Short descriptions are given of about one hundred of the commoner British Birds, and a copious index is one of the best features of the book. The little volume ought to prove a useful companion to country pedestrians who take even a casual interest in bird life."

MEDICINES.

PANNASSINA.
A medicinal preparation for Canaries and all kinds of cage birds, prevents and cures asthma, wheezing, loss of song and all diseases caused through damp and cold; is an excellent stimulant, and takes the birds easily through their moult. This speciality has built up a 30 years' reputation entirely on its own merits, invariably effecting a cure after every other remedy has failed. In 6d. and 1s. tins, postage 1d. extra. If you cannot obtain it from your tradesman, apply direct to W. J. Hammond, 19, Anstey Road, Coldharbour Lane, Camberwell, London, S.E. Agents wanted.

J. Sandiford, Bird Specialist, PRESTON, Lancs.

FOR GENUINE AND RELIABLE

British birds, see my free list.—W. Rudd, Bird Specialist, Norwich.

GOLDFINCHES. GOLDFINCHES. GOLDFINCHES.

Just a few left.—Real beautiful cock Goldfinches, for singing, showing, muling, 2/6, 3/-, 3/6, 4/- each; Goldfinch cages, 1/8; Linnet cages, 1/3; Lark cages 1/-.—Matt. Hopkins, Bird Specialist, 38 and 41, Fylde-st., Preston, Lancashire.

MATTHEWS, LINNET KING.

Linnet singers, are you aware that my birds are caught? They are the best and keenest singers that it is possible to get. I have sent these Linnets all over England for the last five years for contest birds. All my Linnets are caught from the hills, and not these common little coasters. I have the nicest lot of spring cocks in England. Big fine healthy Linnets, well pencilled, with nut-brown backs, fit for show, 2/6 and 3/-, and a few extra large Linnets, blood-red breast, nut-brown backs, blue beaks, very steady, sure mulers, 2/6. I have nice lot of steady birds, in grand song, well caged, all taught under my well known Cheshire champions, real bargains, 2/6 and 3/6. Free sample of my special Linnet mixture sent with every order; mixed by a 40 years' experienced Linnet singer; sold at 3d. packet; also for making Linnets sing at one another with their wings down. Dandelion seed, 5d. oz., 5/- lb.; Lettuce seed, 3d. oz., 3/6 lb.; Gold of Pleasure, 6d. lb.; or mixed with my best wild seed at 3d. packet, four packets a 1/-. No Linnet fancier should be without my special seed, it is the best in England. Buy from the catcher. Note.—All on approval.—Matthews, Birdcatcher, 44, George-st., Hyde, Cheshire.

GOING ABROAD. MUST SELL

the remainder of my stock and cages; no reasonable offer refused for the champion cock Yellowhammer, 1st Warrington, 2nd Manchester, etc., etc., cock Bullie, 1st Leicester, 1st Nottingham, 1st Carmarthen, 2nd Hull, also the champion hen Bramble, 1st Manchester, 1st Nottingham, 2nd Watford; a few grand muling hen Bullies, 2/6 each; also selected cock Bramblefinches, 2/6 each; large cock Greenfinches, 2/- each; cock Linnets, 2/6; cock Thrush, pure wild note, 4/-; two Waxwings, 10/- each; the first reasonable offer accepted for lot, or any of the above champions; must absolutely sell out before the 2nd week in April; please make me a bid.—Bailey, 109, Gloucester-rd., Bristol.

HARRY ALLEN.

The champion of all champions. Gentlemen, to prove this look up your back numbers of CAGE BIRDS. Why am I? Because I keep and send out nothing but the very best. Big, fine, healthy cock Linnets, well pencilled, stand well, 2/6 each; extra picked birds, sure mulers, 3/- to 3/6. Remember, I still hold the record, as I sold three of the above kind to Sergeant Smith, Leeds Fire Brigade, which bred over 60 Mules. Grand cock Linnets, singing beautifully, in a polished singing contest cage, with a packet of my special mixture and instructions how to feed, 4/- the lot; young house moulted Linnets, singing bard and taught by my champions, 7/6 8/6, 10/6, including singing cage; birds specially trained for contests, 15/- each; no rubbish; all are singing hard and in the best of health. Linnet fanciers wishing to be to the front should send stamped envelope for particulars of my book on Linnets; no waiting, as I have had another thousand printed. Four packets of my special mixture, 1/-; contest cages, 1/6 each, 7/6 half dozen. "Graham-st., Stanhope, Dear Sir,—Received bird all right. Very pleased with him.—A. Forster to H. Allen." "29, Kingston, Sunderland. Dear Sir,—Received bird in good condition.—F. Wilson to H. Allen." "New Bridge-st., London. Dear Sir,—Linnet arrived safe. He is a fine marked bird, and very nice shape, and also a good singer. I am going to show him at Llandudno. I shall not forget to recommend you whenever I can.—C. Fisher to H. Allen." I have hundreds of testimonials. Linnet fanciers visiting Leeds during Easter should call and hear the proudest and cleanest quality singing Linnet in the world; worth coming 100 miles to hear. Everybody welcome. I see there are a few trying to imitate, so (advertisers please copy) see Singing Results.—Harry Allen, 42, Brown-hill-cres., Harehills-lane, Leeds.

THERE ARE TWO WAYS

of buying birds. One is by sending away your money and having to put up with what you get in exchange for it, and the other is by buying from a man who sends his birds on approval, and refunds your money in full if you are not perfectly satisfied. I was the originator of this approval system in connection with wild birds, and am still the only one who sends wild birds on approval all the year round. Splendid large Worcestershire cock Goldfinches, in pink of health and condition, 2/6 each, three 6/6. Specially selected larger birds, to moult for exhibition or muling, 3/-, 4/-, and 5/- each. Hen Goldfinches, 1/- and 1/6 each. Cage moulted cock Goldfinch, in splendid song, just right for muling, 5/-. Grand large cock Siskins, very steady and full song, 3/6 each. Cock Bullfinches, splendid health and condition, 2/- and 2/6 each. Grand country-caught cock Linnets, with nut brown backs and red breasts, 1/- each, three 2/6, six 3/6. Few very large and warranted in song, 1/6 each, three 4/-. These Linnets are exactly the same as those supplied by me to the Linnet singers of "Leeds," "Hull," "Bolton," "Durham," "Leigh," etc., etc., and I have sold hundreds of contest winners during the past 16 years. Cock Goldfinch Mules, pure Finch song, 5/-, 6/-, and 7/6 each. Two real stormers, used to catching and sing anywhere, 10/- each. Hen Mules, 1/6 each. Cock Greenfinch Mules, Canary song, 4/-, 5/-, and 6/- each. Hens, 1/6 each. Muling hen Canaries, splendid large birds, 3/- and 4/- each. One two-year-old, hand-reared Lark, in full song, sing anywhere and any time, a veritable street ringer and contest winner, 20/- lowest. Every description of cages in stock, from 3d. to £5. Dealers should send stamp for full trade list of sizes and price of cages. Self-acting spring net traps, warranted to catch and hold any bird, from Wren to Rook, 24 in. long, 1/- each, 18 in. long, 9d. each. These net traps are by far the largest and best traps on the market; they have entirely superseded the old-fashioned ones, and are being used by all the leading Nightingale catchers. Patent self-setting and self-acting trap cages, 1/6 each. Clap nets of all sizes in stock. Send stamp for full printed list of all catchers' appliances, as used by all professional catchers throughout United Kingdom and many of the Colonies. Thousands of testimonials published in this paper alone, and piles of them open for inspection. Visitors to Birmingham are requested to call and inspect stock, open from 9 a.m. to 9 p.m. daily. Please note new address, by far the largest, best stocked, and only centrally situated stores in Birmingham.
W. GORE, 131, Gooch Street, BIRMINGHAM.

Real Siberian Goldfinches

READ OF SUCCESS.

Last arrival of these wonderful Siberians, with full scarlet-coloured blazes, like giants; full moulted, and perfect in every way, hundreds of winners sold every year; price 5s., 6s., and 7s. 6d. each; two, 9s.; hundreds to select from. Mr. McNunn Castle Douglas, Nov. 25, 1906. "Glad to let you know the Siberian I got in 1904 won 1st and Spl. Dalbeathe on Jan. 1, 1905. Since then 1st Kirkcudbright; again this year at same place another 1st and Spl., also 1st and Spl. at Carlisle, 1906. 1st and Spl. Ayr and Silver Medal. Send me another good one at once." Mr. Murdock Girvan: "Siberian Goldfinch arrived safe, and won first prize. Thanks for same."

Show Cages for Same, 2/-. Order at once.

J. SANDIFORD, BIRD SPECIALIST
Established 1879. PRESTON, LANCS.

LATEST OPINION OF MACKLEY BROS.' BIRDS.

"High Street, Uppingham, Rutland. Jan. 12th, 1907. Dear Sirs,—The two Birds arrived safe, in the PICTURE OF HEALTH; they are the BEST TYPE of Norwich Plainhead I ever saw. I am HIGHLY DELIGHTED with them. I shall certainly recommend you to all I have the opportunity of so doing. I never had the favour done me from any one FIRM but yours by sending birds on approval without the Deposit System. Trusting the Firm of MACKLEY BROS. may live and reign for the sake of their customers.—Yours faithfully, J. Waddingham to Mackley Bros."

Postal and Telegraphic Address: **MACKLEY BROS., (Jacob Mackley), NORWICH.**

NOTICE, CALL OR WRITE

and inspect my Norwich. I have a spleudid collection in all colours, except greens, and every bird is in the primest condition and feathered like silk; cocks, in full song, 7s. 6d., 8s. 6d., 10s. 6d.; hens, 4s., 4s. 6d., 5s., 5s. 6d.; all on seven days' approval; P.O. or deposit; note, inspection invited any time.—William Shaw, 97, Essex Road, Islington, London, N.

JOHN C. BARNES.

Having selected my own breeding stock, can spare few choice birds, well up in substance, true type, and of grand depth of colour, winner of silver cups 1901, 1902, 1904, 1905, 1906., price reasonable; approval; inspection cordially invited; stamp reply; pairs properly matched.
149, Duncombe Street, Walkley, Sheffield.

WICKS BROS., NORWICH,

offer grand pairs Norwich Plainheads, selected and matched for immediate breeding, 8/6, 10/6, 12/6, 15/-, 21/- upwards; ditto, cocks, 5/6, 6/6, 7/6, 10/6 upwards; hens, 3/-, 4/-, 5/-, 7/6 upwards. All on approval; quality uncqualled compared with prices. Send for current price list and catalogue of live stock and all appliances, post free. Postal and Telegraphic Address: Wicks Bros., Norwich.

EXTRAORDINARY VALUE.

Look round your rooms and see if you require any of following, every bird a bargain:—Clear buff (large) Norwich hens, 4/-, 4/6, 5/-; buff variegated hens, 3/6, 4/-, 4/6; few splendid Yorkshire hens, 5/-, 5/6, 6/-; Norwich or Yorkshire cocks, 7/6, 8/6, 10/6; also few pairs, all ready to nest immediately, and honestly worth double. Try one and see value; approval anywhere, deposit.—R. Hanford, Osmaston-rd., Derby.

CHAMPION NORWICH.

E. CODLEY, Rishton, nr. Blackburn,
Breeder & Exhibitor, has a few choice birds for sale. Also **Cinnamons.**

SILK'S CHAMPION NORWICH.

My name and fame as breeder of Norwich Plainheads is so well known to every fancier that my birds need no paper recommendation. I breed to sell. Most of the leading champions have been bred and sold by me, my vast business having been built purely upon recommendation, not on paper bounce. If you were disappointed last year with Norwich purchased elsewhere, try a pair from a strain of many years' standing. Success certain. Every pair on approval, money returned if unsatisfactory, or deposit with Editor. Satisfaction guaranteed. Champion pairs, 15s. 6d., 20s. 6d., 25s. 6d., 30s. 6d. per pair; some tip-top cocks and hens, yellow or buff, 10s. 6d., 12s. 6d., 15s. 6d. each. Don't risk unreliable strains, but send to the fountain head, or a season's work may be wasted. Remember, all on approval, willingly.
Judge A. E. Silk, *THE AVIARIES,* **Whitstable.**

LOOK HERE!

I am anxious to remind you that I have the best stock of Norwich Canaries ever seen in one bird room, having over 500 pairs to select from (including the whole stocks of two noted exhibitors). I can offer you many this season's winners and pairs properly matched for breeding winners. I shall be pleased to send you any birds on seven days' approval, carriage paid. I yearly sell many thousands of birds, and give every customer satisfaction. I guarantee to please you if entrusted with your order. I am now offering exceptional good value in typical Norwich cocks, 6/6, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, and 25/- each. Hens, 4/-, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6, 12/6 each. Matched pairs, 8/6, 9/6, 10/6, 12/6, 15/-, 17/6, 20/- upwards. I receive many thousands of unsolicited testimonials, of which the following are samples:—"77, Belmont-st., Oldham, March 2nd, 1907. Received bird quite safe. I am more than pleased. It is worth a lot more than I paid you for it. Your honest and straightforward way of dealing is a credit to you. I can confidently recommend you to all my friends.—W. Mitchell to Miss Storey." "2, Windsor-ter., Kilbowie, March 3rd, 1907. Received bird in the pink of condition. I am well satisfied with the way you transact your business.—J. Garseadden to Miss Storey." I have thousands similar to the above all open for inspection. New illustrated price list post free. Travelling cages, 2d. each. I send all Canaries carriage paid, on seven days' approval, at my own risk. —Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.

REMARKABLE

Importer of Hartz Mountain Roller Canaries; wholesale only.—No. 9, Chamber-st., Leman-st., London, E.

HARTZ MOUNTAIN

Roller cock Canaries, direct from Hartz, beautiful birds, only 3s. 9d. each; 21s. a stick, try one.—Varney, Stratford.—"The Elms, 18, Whitehouse Loan, Edinburgh, January 1st, 1907.—Hummell arrived safely, and sings lovely; it is a pretty bird, and gives satisfaction.—N. Turnbull."—"January 2nd, 1907.—Birds arrived, are singing well.—R. M. Lee, 79, Mill Street, Crewe."—"Broom, Newton Mears, Glasgow.—The birds arrived in good condition; I am well pleased with such value.—J. Broom."—"January 2nd, 1907, 32, Easson Road, Darlington.—Bird to hand. I like the song wonderfully well, and thank you for your prompt delivery and attention to my instructions.—H. Hutchison."—Send all orders to Varney, Stratford, London.

Hummel Rollers.

Finest Rollers imported. To speak well of the Hummel is to gild refined gold. Testimonials from customers who say the Hummel is still singing as sweetly as when purchased four, five, six, and seven years ago. All Hummels have delightful, deep, delicate bow roll, hollow roll, hollow bow roll, du pipe, hollow bell roll, grand round bass roll, vibrating hollow roll, and charming water bubble roll: one price only, 12s. 6d.; no fancy prices; Hummel hens, 3s. each; a beautiful pair of Hummels for 15s. St. Andreasberg Rollers, 5s. and 7s. 6d. each. Hummel Schoolmasters, 20s. each, better than can be obtained elsewhere at treble the price. Thousands of testimonials have been published by me in CAGE BIRDS from satisfied customers. I guarantee strictly honourable trading and satisfaction to all.—Varney, sole proprietor and importer of this remarkable Roller Canary. Twenty years advertiser.—Varney, Stratford, London. Export a speciality. "The Schools, Overton, Ellesmere.—Hummel arrived, it at once commenced to sing—yes, a song worth listening to. It is the most exquisite songster I ever heard —decidedly a perfect Roller. I may say I never expected such perfection; they are worth all you charge for them. I must thank you for your courtesy, and shall be able to recommend your firm to those who require birds and not rubbish."—F. Robbins, to Varney, Stratford, London. Sole Proprietor and Wholesale Roller Canary Importer and Dealer.

MANY PEOPLE RUN

Away with the idea that to get a tip-top Roller Canary one has to pay a big price. That this is an erroneous idea a perusal of this advertisement and a trial of my birds will prove. I import all my Rollers direct, and by purchasing large quantities at rock-bottom prices for spot cash, and by so doing am enabled to retail them at lower prices than others can buy at. I have an enormous stock of pure St. Andreasberg hollow Rollers, all in full song, day and gaslight, with long hollow and double rolls, sweet, silvery trills, water-bubble runs, soft roulades, hollow bell rolls, deep bass rolls, Nightingale jug-jug, barp, gong, and dau-dau pipes, etc., etc., and warranted free from any harsh or objectionable notes whatever, price 7/- and 8/- each. Real Bandmasters, which excel in the deep bass rolls and hollow tours, 10/- each. Also a few premier Contest Masters, which have been specially selected from song boxes for me and are now fit to win contests immediately, 15/- each. Pure Roller hens, warranted same strain as above cocks, 3/- each, two 5/6. Ordinary loud, free singing Hartz cocks, in full song, day and gaslight, 6/- each, two 1/-. Hartz hens, 2/6 each, two 4/6. Singing box cages, 1/- and 1/3 each. Roller song cabinets, with folding doors, made specially for my Rollers, 2/3 each. Do you happen to know any of the following persons? If so, kindly ask them what they think of my Rollers, full name and address given in every instance. "23, Cotlands-rd., Bournemouth, Feb. 12th. Sir,—Miss Craddock received Roller safely this evening. Bird has only just been unpacked, and has started to sing already." "42, Wood-st., Cheapside, London, Feb. 13th. Sir,—Many thanks for birds, which arrived safely this morning. Mr. Schoolmaster sang his arrival soon as unpacked. I think he is worth double the price I paid. If you send to all your customers such Canaries, I think you ought to charge something more for each bird. Please accept my thanks.—Yours, B. C. Gonsalues." "82, Pagett-st., Loughborough, Feb. 16th. Sir,—Bird arrived safely. I am quite satisfied with it. It is a real gem.—Yours, Harry Berry." "5, Thomas-st., Prospect-row, Sunderland, Feb. 15th. Sir,—Birds arrived in grand condition, and I am highly satisfied.—Yours, R. Mitchinson." "22, Crown-st., Silverdale, Feb. 17th. Sir,—I have had the Bandmaster ten days, and am highly satisfied with same. Please forward another. P.O. enclosed.—Yours, Tom Barratt." "132, Avenue-rd., Gosport, Feb. 18th. Sir,—Received Roller quite safe, and am very pleased with it. It is a beautiful songster, and I am delighted.—Yours, J. H. Constable." "Feathers Hotel, Hall-st., Rhos, Feb. 18th. Sir,—Roller arrived in good form, and I am highly pleased with same. He sang as soon as unpacked.—Yours, W. Price." "11, Bryn-rd., Llanelly, Feb. 20th. Sir,—Received Roller hens quite safe, and am well pleased; they are two beauties. I have dealt with you for past four years, and am glad to say shall always send to you for all my birds.—Yours, David John." "98, Wingrovegdns., Newcastle-on-Tyne, Feb. 23rd. Sir,—Schoolmaster I got off you last October is singing grand. Please send following.—Yours, R. Swan." "6, Richmond-st., Neath. Sir,—Received birds Saturday, and am well pleased. Thanks very much.—Yours, A. Jutsum." "15, Deckham-ter., Gateshead, Feb. 23rd. Sir,—Received bird safe, and I like it very much indeed. Thanking you.—Yours, W. Gladman." "40, Rydal-st., West Hartlepool. Sir,—Received Roller hens all right, and am quite satisfied. I won't forget you when I want anything else.—Yours, S. Steel." "67, Victoria-st., Newtown, Wigan, Feb., 25th. Sir,—Received bird on Friday, and is a splendid bird for the money. Thanks for prompt attention.—Yours, Thos. Kay." Piles upon piles of similar letters to above all open for inspection any time. Please note all Canaries (cocks and hens) are sent on full week's approval at my risk, either cash or deposit system of CAGE BIRDS, and money freely and fully refunded if every expectation is not realised. All imported direct from Leipzig, and stamped on wing, "Hans Weber, Leipzig." I am under special contract to take the whole of these birds, and if you would be sure of getting one you must purchase from me as no other dealer can get one feather of this strain unless he purchases from me. If you are still in doubt as to who has best strain of Rollers extant, try one of mine and one from elsewhere at any higher price, and keep the one which suits you best. This is constantly being done, and it's a significant fact that I am being continually informed that my birds always come out of the trial best. Inspection cordially invited any time.

W. GORE, Direct Importer,
131, Gooch Street, Birmingham.

MISS STOREY.

Miss Storey has the finest and purest collection of genuine trained Rollers in England, every bird in full song by day and artificial light, singing their pure Roller song. Every bird is cold room bred and kept. These are the genuine Rollers (not cross-bred rubbish). My stock consists of high-class British bred Rollers, bred from and related to the best of contest singers and winners. Cocks, in full song, 15/6, 17/6, 20/-, 23/-, 30/-. A few extra special at 40/-, 50/-, and 60/-. Hens to match same, 4/6, 5/6, 6/6 each. Genuine trained St. Andreasberg Rollers, with full change of song by day and artificial light (no common German rubbish these), 8/6, 10/6, 12/6, 15/-. Pure Roller hens, 3/-, 3/6 each. Hartz Mountain Roller cocks, in full song by day and gaslight, very loud free songsters, 6/-, 6/6, 7/- each. Matched pairs for breeding songsters, 8/6, 9/6. The quality of my birds speaks for itself. I have many thousands of testimonials open for inspection, of which the following are a sample:—"11, Summerson-st., Hetton-le-Hole, March 2nd, 1907. Received Roller safe, in pink of condition. He commenced singing as soon as put into cage. He is really a beauty. I am more than satisfied with him.—R. Allen, to Miss Storey." "Front-row, South Shields, March 2nd, 1907. Received Roller in splendid condition. I am highly pleased with him. He is a beautiful singer.—J. Printers, to Miss Storey." "18, George-rd., Birmingham. Received Roller safely. I am more than pleased with it, being a very nice bird, and lovely singer.—T. Nuttall, to Miss Storey." Allow me to send you one or more birds on approval. You will then be convinced that I supply genuine birds at reasonable prices. New illustrated price list post free. Travelling cages, 2d. each. All Canaries sent carriage paid, on seven days' approval, at my risk. —Miss E. L. Storey, Crowle, Doncaster.

A GREAT CHANCE

THAT SHOULD NOT BE MISSED.

I have just concluded another purchase of close upon **Two Hundred Home-bred Rollers.** These are well-bred, few better, **some of the original Stock Cocks costing 30/- and £2.** But, unfortunately, the breeder has not had the time to give them the training they deserved. They will therefore be **sold for stock at the absurd prices of 7/6 and 8/6 each.**

Hens, both imported and Home-bred, in the finest breeding condition. I have the Largest Collection of **Choice Pedigree Roller Hens** ever got together in one lot. They comprise pure Scifert and Trute Hens, and I can honestly recommend these to all breeders wanting Reliable Breeding Stock to produce the best money can buy. You can give 10/6 or more, and cannot get better blood or stock. Can be seen.

IMPORTED—Trained Cocks, 8/6, 10/6, 12/6, 15/-, 20/- and upwards; Hens, same strain, 3/6 and 5/- each, pairs 10/6, 15/-, 20/-. All on seven days' approval, cash or deposit.

HARTZ SINGING COCKS 6/6; Extra selected, with better notes, 7/6; pairs, 9/6. Strong Hens 2/3 each.

Home-bred (guaranteed), Trained Trute and Scifert Cocks, 10/6, 12/6, 15/- and 20/- each; Hens, guaranteed same strains, strong, healthy and in the best of breeding condition, 4/6, 5/- each. These have been purchased direct from the breeder and trainer, and can be recommended. Remember, it is no use breeding from good Cocks and common Hens if you want good results.

Full printed instructions, how to keep in health and song, sent with every bird as for the past 30 years. Beware of copyists and their "catch" methods.

W. RUDD, THE Bird Specialist, **NORWICH**

BUY DIRECT OF

Breeder and Trainer. Finest strain of Rollers in the country; trained to perfection, 7s. 6d., 10s., 12s. 6d., 15s. upwards; hens 2s. 6d., two for 4s. 6d.; cash or deposit.—F. Cartwright, 15, Farfield. Kidderminster; established 1888.

KNIGHT'S YORKSHIRE AVIARIES.

To fanciers desiring to see my rooms and birds (over 200, all Yorkshires) during holiday week (purchasers or otherwise makes no difference), will be at home every day. Nearest stations, Bradford; trams from Bradford to Allerton every quarter hour, 2d., alight Cobden-st., close to residence; see advertisements.—Jonas Knight.

BENNETT'S

Champion Yorkshires, highest awards, ten guinea challenge and other cups, Palace, etc.; finest strain in the world; few properly-matched pairs cheap, same blood as those supplied by me to England's most successful exhibitors of Yorkshire Canaries; price list free.—59, Waverley-rd., Great Horton, Bradford.

Bailey and Swanger's Yorkshires, winners of championship diplomas, Palace medals, and cups at Crystal Palace 1904, 1906, 1907, for best Yorkshires in leading classes. Having picked our breeders out, can spare few slashing pairs, 20/- to 60/-; three days' approval.—24, Sandy-lane, Allerton, Bradford.

Hudson's Champion Yorkshires are what you want to breed your own winners. Bred from or related to winners. Few green marked, Cinnamon marked, and clears, in matched pairs, at 10/6, 12/6, 15/-, 17/6 per pair; single cocks, for stock or song, at 7/6, 8/6, 10/6; hens, yellow and buff, 5/6, 6/6, 7/6; all cold-room bred and kept, ready for breeding. Remember my terms, four days' approval; stamp reply.—Hudson, Confectioner, Thackley, Bradford.

CHAMPION YORKSHIRES.

SPECIAL Notice.—Write or call at any time and see my splendid lot of long, slim, straight, upstanding Yorkshires; every bird in the primest condition, with plumage like silk; every cock warranted singing; all cold room bred and kept. I have them in all colours except Greens, and all on seven days' approval; cash or deposit; Yellow cocks, orange-yellow, 8s. 6d., 9s. 6d., 10s. 6d.; Buffs, cocks, 7s. 6d., 8s. 6d., 10s. 6d.; Orange-Yellow hens, 4s. 6d., 5s., 5s. 6d.; Buff hens, 3s. 6d., 4s., 4s. 6d.; inspection invited.—Shaw, 97, Essex Road, Islington, London.

MAKE A COMPARISON.

Yorkshires to suit all. Immense stock. Cocks, 5/6, 6/6, 7/6, 8/6, 10/6, 15/-, 20/- 30/. Hens, 3/6, 4/6, 5/6, 7/6, 10/6, 15/-. Pairs matched for breeding, 8/6, 9/6, 10/6, 12/6, 15/-, 20/-. Travelling cages, 3d. extra. Such value in Yorkshires has never before been touched. All on approval. Guaranteed the best value ever offered in Yorkshires. See my other advertisement on this page.—W. Rudd, The Bird Specialist, Norwich.

A REAL Live . . . Question: IS IT A BIRD YOU WANT?

If so, yours is a want that I can best supply. Suppose we have a little chat between ourselves as buyer and seller. All you need do is to send me a description of the kind of bird you want, and I can then select from my enormous stock just the bird that will meet your requirements.

The price I shall ask you to pay for it will be less than its true value, and to prove my statement, I am prepared to send you a bird for a week's trial, and if at the end of the week you want it exchanged for another, or your money back, I shall be willing to exchange it or return your money. While I make this offer in all my advertisements, it is surprising how few of my customers wish to take advantage of it.

Since the Editor of "Cage Birds" acknowledged the receipt of several hundred testimonials on March 9th, I have received hundreds more all filed for inspection at my office. I have only given one example this week. Pressure of business prevents me giving more.

Have Paid more for Nondescripts.

59, Hunter's-rd., Newcastle-on-Tyne. March 16th, 1907.—I have to acknowledge with thanks the receipt of Yorkshire hen Canary, which is unsurpassed for the money, having paid more for nondescripts when commencing in the Fancy. Thanking you for your prompt attention and honest dealing.—Yours faithfully, Geo. M. Carins to E. Taylor.

Yorkshire Cocks.
Clear Yellow, 6/-, 7/6, 8/6, 10/6, 12/6, 15/-, 20/-, 25/-. Clear Buff, 6/-, 7/6, 10/-, 12/6, 15/-, 17/6, 20/-. Ticked or Variegated, 5/6, 7/6, 10/-, 12/6, 15/-, 20/-. Cinnamon Ticked, 6/6, 7/6, 10/-, 12/6, 15/-, 20/-

Yorkshire Hens.
Clear Yellow, 4/-, 5/-, 6/-, 7/6, 10/-, 15/-, 20/-. Clear Buff, 3/6, 4/-, 5/-, 6/6, 8/6, 10/-, 12/6, 15/-. Ticked or Variegated, 3/6, 5/-, 6/-, 7/6, 10/-. Cinnamon Ticked, 4/-, 5/-, 7/6, 10/-, 12/6, 15/-. Pairs properly matched for breeding Yorkshires, 10/6, 12/6, 15/-, 21/-, and upwards.

E. TAYLOR,

Bird Specialist,

3 & 7, Thornton Road, BRADFORD.

HIRST'S

high-class Yorkshire cocks, few good stock birds cheap, to clear, 10/-, 15/- upwards; approval.—29, Charter-st., Accrington.

THE CHAMPION WINNING STRAIN.

Winner of the Championship Diploma, Crystal Palace, 1906. Having about 60 pairs, we have decided to clear them out for a speedy clearance at 15s. to 20s. per pair, cocks standard length, hens feathered like box, sure to give satisfaction; seven days' approval, P.O. or deposit; stamp reply.—Gill and Pickup, 1, Cragg Street, Great Horton, Bradford. x263

KNIGHT'S YORKSHIRE AVIARIES.

Desiring to clear by end of month all my high-class Yorkshires (except our selected breeders), I offer 70 pairs properly matched, unrelated, at 12/6, 15/-, 20/-, 25/-, to 30/-; single cocks and hens proportionate; all cold-room bred, reared, and kept; all approval, cash or deposit. Few exhibition specimens from 20/-, 30/-, and 40/- each. Before purchasing elsewhere send 2d. in stamps for my newly published booklet, "The Whole Art of Colour Feeding and Training Yorkshire Canaries." Remember old address, Jonas Knight (author of "The Yorkshire Canary: Its Breeding and Management."—Allerton, Bradford, Yorkshire.

WILCOCK'S YORKSHIRES, NORWICH.

I can supply you with either Yorkshires or Norwich Plainheads, for either stock or the show bench, all bred from my winners at all the leading shows, no better blood in the Fancy, pairs from 12s 6d, 15s., 20s., 30s.; cocks or hens, from 7s. 6d., 10s. 6d., 15s., 20s. each; 3 days' approval.—14, Chapel Street, Eccleshill, Bradford, Yorkshire.

See W. RUDD'S Advertisements

Under all Headings. For testimonials, see page **273** of this paper, March 23rd. **Remember,** I send fully **Extended Price List free.** Unlike many imitations of this List, **it is genuine,** because I possess the birds there mentioned and **challenge denial.** They can be seen, not on paper but in reality, as I do not choose to give **myself** away in that style. **NOTE.**—For **three stamps** I will send my **Amateurs' Guide and Breeders' Handy Diary,** containing over **250 Illustrations.**

NOTE.—All Amateurs should try my Special Matched Pairs of Prize-bred Norwich Plainheads at 10/6, 12/6, 15/-, and 20/-. Crested ditto, 15/-, 20/-, 25/- and 30/-. Yorkshires, 12/6, 15/-, 20/-. These are the *Best Value* ever offered.

FEEDING HENS PROPER, not little German wasters or Antwerp do., 3/-, 3/6; large 4/6. Travelling Cages, 3d. extra.

"EGGERTINE."

It is the best, purest, and greatest bone and muscle forming food ever known, as the analytical reports of most eminent authorities prove. It will bring hens into sound and robust condition for breeding as nothing else will. This during the past twenty years has been proved by thousands. It is a genuine egg food made with fresh laid English eggs, with white, of course, included (and NOT foreign preserved yolk of egg) with other valuable properties combined. Tins, post free, **1s. 3d.**; large size, **2s. 6d.** There is a saving in the larger size.

W. RUDD, *THE Bird Specialist,* NORWICH.

EXQUISITE coloured plate of Cinnamon marked Yorkshires, pronounced by Mr. Battye to be ideal, sent, carefully packed, on receipt of a 6d. postal order.—F. Carl, 154, Fleet Street, London.

CHAMPION Yorkshires.—Twenty pairs for sale, including pairs that have bred winners at Otley, Bradford, Keighley, Palace, and other leading shows, from 12/6 to 25/- per pair; single cocks, 6/6, 8/6, 10/6, 15/-; hens, 4/6, 6/6, 8/6, 10/6; approval.—W. H. Berry, Ingrow, Keighley.

POWICK'S champion Yorkshires in all classes, the same strain as the winners at all leading shows, cocks, 7s. 6d., 10s. 6d.; hens 5s. 6d., 7s. 6d. each; pairs mated to breed winners, 12s. 6d., 15s. 6d., and 20s. per pair; no rubbish; ten days' approval.—Wm. Powick, Eastfield House. Dewsbury, Yorkshire.

SEND to the old Yorkshire breeder for good upstanding Yorkshires, best quality, cocks, full song, yellow or buff, 8/6, 10/6, 12/6; hens, yellows or buff, green-marked or Cinnamon-marked, 5/-, 6/-, 7/-; pairs, 12/6, 15/-, 17/6; seven days' approval; cash or deposit.—Pickles, Wardman-st., Keighley, Yorkshire.

MURGATROYD AND SON, breeders 21 years, runners up for Yorkshire Amalgamation 25 guineas challenge trophy, 1906, also winners Yorkshire Amalgamation challenge cup, 1905 and 1906. We have only a few pairs for disposal, cocks, long and stylish, hens, feathered to perfection. These are real bargains to clear; no rubbish; satisfaction guaranteed; four days' approval; stamp for particulars.—35, Lytton-rd., Girlington, Bradford.

WANTED, two pairs Yorkshires (must be recognised strain), in exchange for following exhibition Flying Homers:—Blue chequered cock, blue hen, and red cock (McLean's strain), winners Galston, Kilmarnock, Fauldhouse, Sanquhar, etc.; with four-compartment travelling hamper; genuine offer; cards sent; sell £2 2/-; giving up Fancy; full particulars, apply James Garrick, 59, High-st., Kilmarnock, N.B.

MESSRS. AMBLER'S Yorkshires.—As we are reducing our breeding stock, we can offer a few topping yellow and buff cocks at 10/-, 15/-, 20/- and 30/- each; also few choice hens, perfect type, and feathered like wax, at 7/6, 10/-, 15/- and 20/-; these are all the best quality and type it is possible to buy, and are worth double for anyone wanting classical Yorkshires. We have sold more noted champion winners than any firm in the world the last 24 years; approval; stamp particulars.—17, Lytton-rd., Bradford.

CHAMPION YORKSHIRES.

Only a few odd Cocks left of Mr. Bates' strain, at 7/6, 8/-, 9/-, 10/-, 12/- each. Approval, anywhere. No better strain in the World. Won 3,000 prizes this last 20 years. Won this Season, 20 firsts, etc. Estbd. 1879.

J. SANDIFORD, Canary Breeder,
PRESTON, LANCS.

Shackleton's Yorkshires.

£21 Challenge Cup, 1903.
£21 Challenge Cup, 1904.
£21 Challenge Cup, 1905.
£25 Challenge Trophy, 1906.
Four Championship Diplomas Crystal Palace, 1903-4-5-6.

Other Trophies, Cups, Medals, &c. A list of which would be a mere superfluity of words. The above is ample proof that the "Paragon Strain" stands pre-eminent, and is undoubtedly the best and most reliable strain in the world. Having selected my breeding stock I have for disposal some choice stock birds, Cocks, Hens, or pairs. Prices reasonable. Three days' approval. Cold rooms. Stamped address, particulars.

The Paragon, Girlington, Bradford.

LET'S SEE.

I feel sure that I have the birds you are looking for. I have many hundreds of upstanding Yorkshires of the correct type, standard length, tight in feather, exactly the birds you want to breed with. I shall be pleased to send you any of my birds carriage paid, on seven days' approval. I guarantee every customer satisfaction. Tight-feathered upstanding Yorkshire cocks, in full song, 6/6, 7/6, 8/6, 10/6, 12/6, 15/- each. Racy Yorkshire hens, 3/6, 4/6, 5/6, 6/6, 7/6, 8/6, 10/6 each. Properly matched pairs, 8/6, 10/6, 12/6, 15/-, 17/6, 20/- per pair. A few winners at reasonable prices. Send me an order; it will convince you and your friends that I give the best value money can buy. Just read one or two samples of unsolicited testimonials:—"Longwith, near Mansfield. March 8th, 1907.—I beg leave to thank you for the splendid bird you have sent me. Its quality is superior to any bird I have ever bought before. Thanks for prompt dispatch.—J. Padler to Miss Storey."—"1, Ann's-rd., Heeley, Sheffield. March 8th, 1907.—I am greatly pleased with the bird you sent me. I send you order for two more, as I am sure you are worth patronising for your straightforwardness.—C. Wood to Miss Storey."—I have hundreds of similar letters open for inspection, and you will prove the same satisfaction yourself if you favour me with your order. I send all my birds on seven days' clear approval, carriage paid, at my own risk; new illustrated price list free; neat travelling cages, 2d. extra.—Miss E. L. Storey, Bird Specialist, Crowle, Doncaster.
